The articles in this section are written to meet the requirements of information

technology (IT) professionals who are responsible for the planning, design, deployment, and operations of backup and recovery solutions. These solutions might be in enterprise, corporate, or branch-office environments. The IT professionals who are responsible for backup and recovery solutions are expected to have an understanding of the technical details that are contained in this section. Recovery allows you to quickly restore the farm if a problem arises. You can recover the entire farm or one or more components of the farm from a backup.
