**Putin's Wars** Marcel H. Van Herpen,2015-07-01 This fully updated book offers the first systematic analysis of Putin’s three wars, placing the Second Chechen War, the war with Georgia of 2008, and the war with Ukraine of 2014–2015 in their broader historical context. Drawing on extensive original Russian sources, Marcel H. Van Herpen analyzes in detail how Putin’s wars were prepared and conducted, and why they led to allegations of war crimes and genocide. He shows how the conflicts functioned to consolidate and legitimate Putin’s regime and explores how they were connected to a fourth, hidden, “internal war” waged by the Kremlin against the opposition. The author convincingly argues that the Kremlin—relying on the secret services, the Orthodox Church, the Kremlin youth “Nashi,” and the rehabilitated Cossacks—is preparing for an imperial revival, most recently in the form of a “Eurasian Union.” An essential book for understanding the dynamics of Putin’s regime, this study digs deep into the Kremlin’s secret long-term strategies. Readable and clearly argued, it makes a compelling case that Putin’s regime emulates an established Russian paradigm in which empire building and despotic rule are mutually reinforcing. As the first comprehensive exploration of the historical antecedents and political continuity of the Kremlin’s contemporary policies, Van Herpen’s work will make a valuable contribution to the literature on post-Soviet Russia, and his arguments will stimulate a fascinating and vigorous debate.

**Eastern European Youth Cultures in a Global Context** Matthias Schwartz,Heike Winkel,2016-04-29 The demise of state Socialisms caused radical social, cultural and economic changes in Eastern Europe. Since then, young people have been confronted with fundamental disruptions and transformations to their daily environment, while an unsettling, globalized world substantially reshapes local belongings and conventional values. In times of multiple instabilities and uncertainties, this volume argues, young people prefer to try to adjust to given circumstances than to adopt the behaviour of potential rebellious, adolescent role models, dissident counter-cultures or artistic breakings of taboo. Eastern European Youth Cultures in a Global Context takes this situation as a starting point for an examination of generational change, cultural belongings, political activism and everyday practices of young people in different Eastern European countries from an interdisciplinary perspective. It argues that the conditions of global change not only call for a differentiated evaluation of youth cultures, but also for a revision of our understanding of 'youth' itself - in Eastern Europe and beyond.

**Salinity Management for Sustainable Irrigation** Daniel Hillel,2000-01-01 Irrigation has long played a key role in feeding expanding populations and is expected to play a still greater role in the future. However, is it sustainable? Can it remain in existence and function continuously and indefinitely? Some pessimists doubt that it is. This volume presents a more positive approach with carefully conditional optimism. It takes the diffuse, voluminous and disparate facts and combines them in a unified exposition. It merges physico-chemical, agronomic, environmental and economic principles into practical recommendations to help ensure the long-term viability and productivity of irrigated agriculture in arid and semiarid regions.

**Numerical Groundwater Modelling** William C. Walton,1989-01-01 This valuable new book, with 2 programs on diskettes, will help practitioners in solving groundwater flow and contamination problems by integrating simulation techniques. The reader is expected to have knowledge of hydrogeology, and have access to books on groundwater hydrogeology. Two microcomputer programs, in compiled FORTRAN 77 with source codes for simulating quasi-three-dimensional groundwater flow and contaminant migration, are presented in this book. The numerical and analytical techniques incorporated in these programs are described in detail. Data entry has been simplified so that the user can run the programs without worrying about FORTRAN input file structures and editors. The basic requirements are a monitor, dot-matrix printer, and an IBM-PC or compatible computer running DOS Version 2.1 or compatible. Programs require a full 640K RAM (minus that used by DOS) for their operation.
