Handbook of Port Machinery Dexin Tao,

Planning and Design of Ports and Marine Terminals Hans Agerschou, 2004 Written by a collection of eminent figures in the field, this new edition continues to look at the rational planning for port facilities requirements (berths, storage and cargo handling equipment), organisations, management and operations with relation to planning and design of ports and marine terminals.

Port Engineering Gregory P. Tsinker, 2004-02-16 This comprehensive book covers all major aspects of the design and maintenance of port facilities, including port planning, design loads for today's larger vessel size, seismic design guidelines, and breakwater design. New material addresses environmental concerns, the latest developments on inter-modal hubs and transfer points, and the latest information on port security and procedures being implemented around the world.

SME Mining Engineering Handbook, Third Edition Peter Darling, Society for Mining, Metallurgy, and Exploration (U.S.), 2011 This third edition of the SME Mining Engineering Handbook reaffirms its international reputation as the handbook of choice for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content, representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term--why such changes are inevitable, what this will mean in terms of challenges, and how they could be managed Explaining the mechanics associated with the multifaceted world of mine and mineral economics, from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash-flow issues associated with mine planning at a mature operation Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving optimization, or process dewatering methods Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking, whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner, or cast blasting at a surface coal operation Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond, and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders

Working Group Port Maintenance Handbook - Chapter 5: Mechanical equipment ,

Fundamentals of Port Engineering Koos Schoonees, 2023-12-21 Port engineering primarily deals with the design, construction, operation, management, and maintenance of ports, overlapping with many other disciplines. This book provides an introductory text to prospective (graduate) port engineers and presents a wide variety of port subjects for practicing engineers. It covers almost all topics related to port engineering in a fundamental way, including dredging, marine aids to navigation, environmental issues, containers, liquid bulk, dry bulk, general cargo, multipurpose, roll-on/roll-off (Ro-Ro), fishing, and ferry terminals. Discussions are targeted at a conceptual design level. Other features: • Aspects of port engineering are discussed, including shipping, maritime trade, environmental aspects (such as climate change), resilience of ports, nature-based solutions, and port management (such as security, equipment, slurry pumping, and so forth). • Illustrates the design of port terminals. • Discusses site selection for a new port, the factors to be considered, and ways to compare different potential port sites. • Explores asset management and repair of marine structures. • Includes case studies from around the world, examples, and practical and user-friendly guidelines.

Port Planning and Management Simulation Wenyan Wang, Yun Peng, 2021-10-27 Port Planning and Management Simulation examines port planning simulation applications, showing how they support better port decision-making. Using a clear organizational format based on actual port system structure and operation processes, the book provides practical and theoretical insights on port planning and management. The book describes the water, land, collecting and distributing components of the port system, focusing on management, development, and risk mitigation. It examines the key challenges based on discrete system simulation theory that is less affected by local or national regulations. It compares various simulation scenarios for optimal port operational strategy. It quantifies port emissions, analyzes the impact of different reduction strategies, and presents operational strategies for green port planning development and management. Port Planning and Management Simulation provides guidance for carrying out deep analysis in a complex and dynamic system, providing an integrated solution framework based on simulation techniques for improving efficiency and cost savings of the port system. Applications of Evolutionary Computing Mario Giacobini, Anthony Brabazon, Stefano Cagnoni, Gianni A. Di Caro, Rolf Drechsler, Aniko Ekart, Anna I. Esparcia-Alcazar, Muddassar Farooq, Andreas Fink, Jon McCormack, Michael O'Neill, Juan Romero, Franz Rothlauf, Giovanni Squillero, Sima Uyar, Shengxiang Yang, 2008-04-03 Evolutionary computation (EC) techniques are efficient, nature-inspired planning and optimization methods based on the principles of natural evolution and genetics. Due to their efficiency and simple underlying principles, these methods can be used in the context of problem solving, optimization, and machine learning. A large and continuously increasing number of researchers and professionals make use of EC techniques in various application domains. This volume presents a careful selection of relevant EC examples combined with a thorough examination of the techniques used in EC. The papers in the volume illustrate the current state of the art in the application of EC and should help and inspire researchers and professionals to develop efficient EC methods for design and problem solving. All papers in this book were presented during EvoWorkshops 2008, which consisted of a range of workshops on application-oriented aspects of EC. Since 1998, EvoWorkshops has provided a unique opportunity for EC researchers to meet and discuss application aspects of EC and has served as an important link between EC research and its application in a variety of domains. During these ten years new workshops have arisen, some have disappeared, while others have matured to become conferences of their own, such as EuroGP in 2000, EvoCOP in 2004, and EvoBIO last year.

Criminal Law Perspectives John Anderson, Brendon Murphy, Ben Livings, Wendy Kukulies-Smith, Natalia Antolak-Saper, Shireen Daft, 2020-12-03 Criminal Law Perspectives: From Principles to Practice is an engaging introduction to the criminal law in New South Wales, Victoria, the Australian Capital Territory and the Commonwealth Criminal Code. It takes a comparative approach to the law in these jurisdictions, focusing on prevalent summary offences, substantive federal offences and criminal procedure. Complex concepts are explained and contextualised by linking them to practical applications. Each chapter is supported by tools for self-assessment: review questions; case boxes summarising and extracting key historical and contemporary cases; and longer, narrative end-of-chapter problems that promote student engagement and help students develop problem-solving skills and independent thinking. Criminal Law Perspectives explores the development of criminal law principles in Australia, and provides a comprehensive and accessible overview of criminal law for students studying in the area for the first time.

Negotiations in the Indigenous World Ciaran O'Faircheallaigh, 2015-09-16 Negotiated agreements play a critical role in setting the conditions under which resource development occurs on Indigenous land. Our understanding of what determines the outcomes of negotiations between Indigenous peoples and commercial interests is very limited. With over two decades experience with Indigenous organisations and communities, Ciaran

O’Faircheallaigh's book offers the first systematic analysis of agreement outcomes and the factors that shape them, based on evaluative criteria developed especially for this study; on an analysis of 45 negotiations between Aboriginal peoples and mining companies across all of Australia’s major resource-producing regions; and on detailed case studies of four negotiations in Australia and Canada.
