Low-Power Processors and Systems on Chips Christian Piguet, 2018-10-03 The power consumption of microprocessors is one of the most important challenges of high-performance chips and portable devices. In chapters drawn from Piguet's recently published *Low-Power Electronics Design*, this volume addresses the design of low-power microprocessors in deep submicron technologies. It provides a focused reference for specialists involved in systems-on-chips, from low-power microprocessors to DSP cores, reconfigurable processors, memories, ad-hoc networks, and embedded software. *Low-Power Processors and Systems on Chips* is organized into three broad sections for convenient access. The first section examines the design of digital signal processors for embedded applications and techniques for reducing dynamic and static power at the electrical and system levels. The second part describes several aspects of low-power systems on chips, including hardware and embedded software aspects, efficient data storage, networks-on-chips, and applications such as routing strategies in wireless RF sensing and actuating devices. The final section discusses embedded software issues, including details on compilers, retargetable compilers, and coverification tools. Providing detailed examinations contributed by leading experts, *Low-Power Processors and Systems on Chips* supplies authoritative information on how to maintain high performance while lowering power consumption in modern processors and SoCs. It is a must-read for anyone designing modern computers or embedded systems.

Insect Molecular Biology and Biochemistry Lawrence I. Gilbert, 2011-08-16 The publication of the extensive seven-volume work *Comprehensive Molecular Insect Science* provided a complete reference encompassing important developments and achievements in modern insect science. One of the most swiftly moving areas in entomological and comparative research is molecular biology, and this volume, *Insect Molecular Biology and Biochemistry*, is designed for those who desire a comprehensive yet concise work on important aspects of this topic. This volume contains ten fully revised or rewritten chapters from the original series as well as five completely new chapters on topics such as insect immunology, insect genomics, RNAi, and molecular biology of circadian rhythms and circadian behavior. The topics included are key to an understanding of insect development, with emphasis on the cuticle, digestive properties, and the transport of lipids; extensive and integrated chapters on cytochrome P450s; and the role of transposable elements in the developmental processes as well as programmed cell death. This volume will be of great value to senior investigators, graduate students, post-doctoral fellows and advanced undergraduate research students. It can also be used as a reference for graduate courses and seminars on the topic. Chapters will also be valuable to the applied biologist or entomologist, providing the requisite understanding necessary for probing the more applied research areas related to insect control. Topics specially selected by the editor-in-chief of the original major reference work Fully revised and new contributions bring together the latest research in the rapidly moving fields of insect molecular biology and insect biochemistry, including coverage of development, physiology, immunity and proteomics Full-color provides readers with clear, useful illustrations to highlight important research findings

Software Engineering and Middleware Alberto Coen-Porisini, André van der Hoeck, 2007-07-12 The 3rd International Workshop on Software Engineering and Middleware (SEM 2002) was held May 20-21, 2002, in Orlando, Florida, as a co-located event of the 2002 International Conference on Software

Engineering. The workshop attracted 30 participants from academic and industrial institutions in many countries. Twenty-seven papers were submitted, of which 15 were accepted to create a broad program covering the topics of architectures, specification, components and adaptations, technologies, and services. The focus of the workshop was on short presentations, with substantial discussions afterwards. Thus, we decided to include in this proceedings also a short summary of every technical session, which was written by some of the participants at the workshop. The workshop invited one keynote speaker, Bobby Jadhav of CalKey, who presented a talk on the design and use of model-driven architecture and middleware in industry. We would like to thank all the people who helped organize and run the workshop. In particular, we would like to thank the program committee for their careful reviews of the submitted papers, Wolfgang Emmerich for being an excellent General Chair, and the participants for a lively and interesting workshop.

Structure Determination by X-ray Crystallography Mark Ladd, Rex Palmer, 2014-07-08 The advances in and applications of x-ray and neutron crystallography form the essence of this new edition of this classic textbook, while maintaining the overall plan of the book that has been well received in the academic community since the first edition in 1977. X-ray crystallography is a universal tool for studying molecular structure, and the complementary nature of neutron diffraction crystallography permits the location of atomic species in crystals which are not easily revealed by X-ray techniques alone, such as hydrogen atoms or other light atoms in the presence of heavier atoms. Thus, a chapter discussing the practice of neutron diffraction techniques, with examples, broadens the scope of the text in a highly desirable way. As with previous editions, the book contains problems to illustrate the work of each chapter, and detailed solutions are provided. Mathematical procedures related to the material of the main body of the book are not discussed in detail, but are quoted where needed with references to standard mathematical texts. To address the computational aspect of crystallography, the suite of computer programs from the fourth edition has been revised and expanded. The programs enable the reader to participate fully in many of the aspects of x-ray crystallography discussed in the book. In particular, the program system XRAY* is interactive, and enables the reader to follow through, at the monitor screen, the computational techniques involved in single-crystal structure determination, albeit in two dimensions, with the data sets provided. Exercises for students can be found in the book, and solutions are available to instructors.

Short Wavelength Laboratory Sources Davide Bleiner, John Costello, Francois de Dortan, Gerry O'Sullivan, Ladislav Pina, Alan Michette, 2014-12-04 Our ability to manipulate short wavelength radiation (0.01-100nm, equivalent to 120keV-12eV) has increased significantly over the last three decades. This has led to major advances in applications in a wide range of disciplines such as: the life and medical sciences, including cancer-related studies; environmental science, including studies of pollution and its effects; archaeology and other cultural heritage disciplines; and materials science. Although expansion in application areas is due largely to modern synchrotron sources, many applications will not become widespread, and therefore routinely available as analytical tools, if they are confined to synchrotrons. There is a need to develop bright but small and low cost X-ray sources, not to replace synchrotrons but to complement them and this book will look at how to facilitate these developments. Written by a distinguished team of international authors, this book is based on the COST Action MP0601: Short Wavelength Laboratory

Sources. The contents are divided into five main sections. the introductory section provides a comprehensive introduction to the fundamentals of radiation, generation mechanisms and short wavelength laboratory sources. The middle sections focus on modelling and simulation, source development: improvement and characterisation and integrated systems: sources, optics and detectors. The final section looks at recent applications. Aimed at academic and industrial researchers in physical chemistry and chemical physics, the contents provides practical information about the implementation of short wavelength laboratory sources and their applications.

Witte,2014-04-11 Why are some regions and cities so good at attracting talented people, creating high-level knowledge, and producing exciting new ideas and innovations? What are the ingredients of success? Can innovative cities be created and stimulated, or do they just flourish by mere chance? This book analyses the development and management of innovation systems in cities, in order to provide a better understanding of what makes such systems perform. The book opens by developing a conceptual model that combines insights from urban economics with economic geography, urban governance and place marketing. This highlights the relevance of path dependence, different types of proximity (and the role of clusters, networks and platforms), institutional conditions, place attractiveness and place identity in the evolution of local innovation systems. The authors then draw on this conceptual framework to structure empirical case studies in three cities with a relatively high innovation performance: Eindhoven (the Netherlands), Stockholm (Sweden) and Suzhou (China). Through these case studies they provide a detailed analysis of how successful innovation systems evolve and what makes them tick. Unique to this book is the linking of analysis to concrete policy and management responses. The book ends with a discussion on six themes in the development of successful urban innovation systems: firm-capabilities and leader firms, higher education and research, attractive environment, place branding, institutional environment and entrepreneurship. Each theme is examined fully, drawing lessons from the case studies, and from recent insights and other cases discussed in the literature. This title will be of interest to students, researchers and policymakers involved in regional innovation systems, knowledge locations and cluster development.
