Ship English Sally Delgado,2019 This book presents evidence in support of the hypothesis that Ship English of the early Atlantic colonial period was a distinct variety with characteristic features. It is motivated by the recognition that late-seventeenth and early-eighteenth century sailors' speech was potentially an influential variety in nascent creoles and English varieties of the Caribbean, yet few academic studies have attempted to define the characteristics of this speech. Therefore, the two principal aims of this study were, firstly, to outline the socio-demographics of the maritime communities and examine how variant linguistic features may have developed and spread among these communities, and, secondly, to generate baseline data on the characteristic features of Ship English. The methodology's data collection strategy targeted written representations of sailors' speech prepared or published between the dates 1620 and 1750, and prioritized documents that were composed by working mariners. These written representations were then analyzed following a mixed methods triangulation design that converged the qualitative and quantitative data to determine plausible interpretations of the most likely spoken forms. Findings substantiate claims that there was a distinct dialect of English that was spoken by sailors during the period of early English colonial expansion. They also suggest that Ship English was a sociolect formed through the mixing, leveling and simplification processes of koinization. Indicators suggest that this occupation-specific variety stabilized and spread in maritime communities through predominantly oral speech practices and strong affiliations among groups of sailors. It was also transferred to port communities and sailors' home regions through regular contact between sailors speaking this sociolect and the land-based service-providers and communities that maintained and supplied the fleets. Linguistic data show that morphological characteristics of Ship English are evident at the word-level, and syntactic characteristics are evident not only in phrase construction but also at the larger clause and sentence levels, whilst discourse is marked by characteristic patterns of subordination and culture-specific interjection patterns. The newly-identified characteristics of Ship English detailed here provide baseline data that may now serve as an entry point for scholars to integrate this language variety into the discourse on dialect variation in Early Modern English period and the theories on pidgin and creole genesis as a result of language contact in the early colonial period.

Maritime Psychology Malcolm MacLachlan,2017-01-21 This first-of-its-kind volume assembles current research on psychosocial issues and behavioral and safety concerns inherent in life and careers at sea. Focusing mainly on the commercial maritime transport sector, it sets out the basic concepts of maritime psychology in the contexts of health and occupational psychology and illustrates more expansive applications across nautical domains. A systems perspective and detailed case studies spotlight unique challenges to mariners' work performance, personal and environmental health and safety; it also provides support for psychometric assessment of seafarers, and describes emerging uses for the healing properties of the sea and sailing. The book is a springboard for continued research and practice development, further interaction between psychology and the maritime world, and the continued broadening and deepening of the field. Among the topics covered: · Positive psychology and wellbeing at sea. · Transferring learning across safety critical industries. · Occupational stress in seafarers. · The psychology of ship architecture and design. · Motion sickness susceptibility and management at sea. · Risk communication during a maritime disaster. Written with clarity and nuance reflecting the vastness of marine experience, *Maritime Psychology* will be of interest to lecturers, researchers, and students of occupational and health psychology and maritime science, and to social and health scientists and practitioners in these and related fields.
