**Departure Points** Tony Siew,2020-01-01 This book is a narration of my life and ministry among the indigenous peoples of Borneo in Sabah from 1994-2019. The events told are based on my personal recollections and I have not referred to any notes, books or minutes of meetings except in a few places which I acknowledged in the footnotes. To the best of my knowledge the modern history of SIB Sabah has yet to be written (1990 onwards). My book is not a historical narrative nor historiography but a recollection of events from 1989 onwards. I leave it to the historians and research students to write SIB's modern history or evaluate what I have written here. Writing memoirs is a meditative and selective process. We choose what we want to remember and this is my interpretation of events, most of which I had participated in or possessed first-hand knowledge. I have started writing without an outline and without knowing what I was going to write, so what I wrote over two months (Oct 2014) with little revision afterwards, consists of what I remember to be important and significant in this first half of my life and ministry. According to the book of Numbers, the priests begin their duties when they are 30 years old and retire from service when they turn 50. I was 30 years, four months and 5 days old when I started and I have reached 50 in 2014. These memoirs are my reflections of 25 years in active service of the ministry and service of the burden in the house of the congregation of the Lord (Numbers 4:47). I trust that the map shown in the book will give you a sense of the location where I had travelled into 100 villages and towns, almost all of which I had preached and ministered in. My prayer is that for all those who have heard me preached in Sabah, West Malaysia, Singapore, Indonesia, Thailand, New Zealand and Hong Kong and believers around the world will find something helpful and spiritually edifying in this book. May the name of Jesus Christ our Lord be glorified now and forever. 14th October 2019, Feast of Tabernacles, 15th Tishri (5780)

**Windows 10: The Missing Manual** David Pogue,2015-09-17 With Windows 8, Microsoft completely reimagined the graphical user interface for its operating system, which now runs on both desktop PCs and tablets, but the overhaul was not without hitches and its dueling UIs (one designed for touch, the other for keyboards and mice) created significant confusion for users. Windows 10 (a free update to users of Windows 8 or Windows 7) fixes a number of the problems introduced by the revolution in Windows 8 and offers plenty of new features along, such as the new Spartan web browser, Cortana voice-activated "personal assistant," new universal apps (that run on tablet, phone, and computer), and more. But to really get the most out of the new operating system, you're going to need a guide. Thankfully, Windows 10: The Missing Manual will be there to help. Like its predecessors, this book from the founder of Yahoo Tech, previous New York Times columnist, bestselling author, and Missing Manuals creator David Pogue illuminates its subject with technical insight, plenty of wit, and hardnosed objectivity for beginners, veteran standalone PC users, new tablet owners, and those who know their way around a network.

**Ethiopian Icons** Addis Ababa University. Institute of Ethiopian Studies,Stanisław Chojnacki,Addis Ababa University. Ya'Ityopyā ṭenātenā meremer taqwām,Carolyn Gossage,2000 By virtue of its geographic situation, the art of Ethiopia belongs to Africa, however its development was inevitably shaped by historical events. As a result, it is closely linked to models derived from the artistic traditions of Byzantium, and also incorporates elements of Islamic culture and those originating in the Indian sub-continent. The volume presents a comprehensive catalogue of the exceptional collection of paintings on wood belonging to the Institute of Ethiopian Studies in Addis Ababa.

**Innovations in Applied Artificial Intelligence** Bob Orchard,Chunsheng Yang,Ali Moonis,2004-04-22 "Intelligent

systems must perform in order to be in demand. " Intelligent systems technology is being applied steadily in solving many day-to-day problems. Each year the list of real-world deployed applications that inconspicuously host the results of research in the area grows considerably. These applications are having a significant impact in industrial operations, in financial circles, in transportation, in education, in medicine, in consumer products, in games and elsewhere. A set of selected papers presented at the seventeenth in the series of conferences on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems (IEA/AIE 2004), sponsored by the International Society of Applied Intelligence, is offered in this manuscript. These papers highlight novel applications of the technology and show how new research could lead to new and innovative applications. We hope that you find these papers to be educational, useful in your own research, and stimulating. In addition, we have introduced some special sessions to emphasize a few areas of artificial intelligence (AI) that are either relatively new, have received considerable attention recently or perhaps have not yet been represented well. To this end, we have included special sessions on e-learning, bioinformatics, and human-robot interaction (HRI) to complement the usual offerings in areas such as data mining, machine learning, intelligent systems, neural networks, genetic algorithms, autonomous agents, natural language processing, intelligent user interfaces, evolutionary computing, fuzzy logic, computer vision and image processing, reasoning, heuristic search, security, Internet applications, constraint satisfaction problems, design, and expert systems.

*Process Design for Natural Scientists* Anna-Lena Lamprecht, Tiziana Margaria, 2014-09-19 This book presents an agile and model-driven approach to manage scientific workflows. The approach is based on the Extreme Model Driven Design (XMDD) paradigm and aims at simplifying and automating the complex data analysis processes carried out by scientists in their day-to-day work. Besides documenting the impact the workflow modeling might have on the work of natural scientists, this book serves three major purposes: 1. It acts as a primer for practitioners who are interested to learn how to think in terms of services and workflows when facing domain-specific scientific processes. 2. It provides interesting material for readers already familiar with this kind of tools, because it introduces systematically both the technologies used in each case study and the basic concepts behind them. 3. As the addressed thematic field becomes increasingly relevant for lectures in both computer science and experimental sciences, it also provides helpful material for teachers that plan similar courses.
