Teach Yourself VISUALLY Flash CS4 Professional Keith Butters, 2009-04-20 As the industry standard for creating lively Web animations, Flash allows you to develop animation content or turn existing graphics into dynamic Web page animations—the CS4 release guarantees a world of new and thrilling possibilities. If you are a beginner-to-intermediate level Flash user, this book will get you up and running fast as you dive into the tasks of building animation sequences and using ActionScript to create interactive Web page components. Flash XML Applications Joachim Bernhard Schnier, 2007-10 Add seamless,

interactive, user-controlled delivery to your Flash applications. This book builds upon your understanding of basic ActionScript (AS) syntax with the foundational skills that you need to use XML in Flash applications and AS2 or AS3 to migrate your existing applications. Beginning with an introduction to XML, XML parsing methods, and a short introduction to AS2 you learn how to create a universal XML load/onload Class as well as a universal XHTML parser. Then you learn how to use Components using XML as the data source, including the menu, menubar, datagrid and tree component. Finally, a tutorial project-the design and development of a Real Estate Web site that contains an XML search engine-pulls it all together with hands-on experience. All the applications use XML as the data source and are written as class files. Select parts of the Real Estate Web site are redeveloped in AS3 for purposes of illustration. The new XML class is presented and specific code examples demonstrate techniques to apply methods and use properties. Particular attention is paid to the differences between AS2 and AS3 and how to effectively transition from one AS version to the other. The downloadable resources contain code for all of the properties and methods of the AS2, AS3, and XML class examples. Components for the Real Estate Web site project are also provided.

Digital Libraries Applications Edward A. Fox, Jonathan P. Leidig, 2014-03-01
Digital libraries (DLs) have evolved since their launch in 1991 into an important type of information system, with widespread application. This

volume advances that trend further by describing new research and development in the DL field that builds upon the 5S (Societies, Scenarios, Spaces, Structures, Streams) framework, which is discussed in three other DL volumes in this series. While the 5S framework may be used to describe many types of information systems, and is likely to have even broader utility and appeal, we focus here on digital libraries. Drawing upon six (Akbar, Koziévitch, Leidig, Li, Murthy, Park) completed and two (Chen, Fouh) in-process dissertations, as well as the efforts of collaborating researchers, and scores of related publications, presentations, tutorials, and reports, this book demonstrates the applicability of 5S in five digital library application areas, that also have importance in the context of the WWW, Web 2.0, and innovative information systems. By integrating surveys of the state-of-the-art, new research, connections with formalization, case studies, and exercises/projects, this book can serve as a textbook for those interested in computing, information, and/or library science. Chapter 1 focuses on images, explaining how they connect with information retrieval, in the context of CBIR systems. Chapter 2 gives two case studies of DLs used in education, which is one of the most common applications of digital libraries. Chapter 3 covers social networks, which are at the heart of work on Web 2.0, explaining the construction and use of deduced graphs, that can enhance retrieval and recommendation. Chapter 4 demonstrates the value of DLs in eScience, focusing, in particular, on cyber-infrastructure for simulation. Chapter 5

surveys geospatial information in DLs, with a case study on geocoding. Given this rich content, we trust that any interested in digital libraries, or in related systems, will find this volume to be motivating, intellectually satisfying, and useful. We hope it will help move digital libraries forward into a science as well as a practice. We hope it will help build community that will address the needs of the next generation of DLs. XML Primer Plus Nicholas Chase, 2003 This handbook presents XML programming from a conceptual perspective, teaching not just the technology, but the background and thinking behind it. Developers learn to do it right, gaining an understanding of the hows and the whys. Rather than teaching programmers to memorize specific APIs, Chase teaches them how to think about XML programming in a language-neutral way.

XML and Web Technologies for Data Sciences with R Deborah Nolan, Duncan Temple Lang, 2013-11-29 Web technologies are increasingly relevant to scientists working with data, for both accessing data and creating rich dynamic and interactive displays. The XML and JSON data formats are widely used in Web services, regular Web pages and JavaScript code, and visualization formats such as SVG and KML for Google Earth and Google Maps.

In addition, scientists use HTTP and other network protocols to scrape data from Web pages, access REST and SOAP Web Services, and interact with NoSQL databases and text search applications. This book provides a practical hands-on introduction to these technologies, including high-level functions the authors have developed for data scientists. It describes strategies and approaches for extracting data from HTML, XML, and JSON formats and how to programmatically access data from the Web. Along with these general skills, the authors illustrate several applications that are relevant to data scientists, such as reading and writing spreadsheet documents both locally and via Google Docs, creating interactive and dynamic visualizations, displaying spatial-temporal displays with Google Earth, and generating code from descriptions of data structures to read and write data. These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies. The book contains many examples and case-studies that readers can use directly and adapt to their own work. The authors have focused on the integration of these technologies with the R statistical computing environment. However, the ideas and skills presented here are more general, and statisticians who use other computing environments will also find them relevant to their work. Deborah Nolan is Professor of Statistics at University of California, Berkeley. Duncan Temple Lang is Associate Professor of Statistics at University of California, Davis and has been a member of both the S and R development teams.

Flash MX Studio Connor McDonald, Jon Steer, Jerome Turner, Abe White, Gerald YardFace, Matthew Baldwin, Steve Webster, David Tudury, 2013-11-11 Flash MX Studio takes your raw Flash talent and multiplies its potency by focusing it on real-world web design situations. In the heady days of the late 1990s, designers were trying their hand at anything and everything they could lay their hands on. Now the marketplace is seriously focused, and serious Flash designers have to know exactly what they're doing and why. These days, it's all about functionality over experimentation, justification over style. It's all about maturity. The design must fit the job specs, and this book shows the reader how to fulfill these requirements and more. This book examines all the avenues open to professional or aspiring professional Flash MX designers. It takes a look at advanced uses of the new MX features, such as components and the Drawing API, and gives guidance on building whole new structures for animation, Dynamic Content, PHP, ColdFusion MX, XML, video, audio and audiovisual formats. Never before has so much power been so accessible to the web designer. This book is designed to put that power in your hands. Flash MX Studio has been broken into four sections to address the most common needs for the Flash designer. First off, Jamie McDonald provides five chapters on

site presentation and the principles of web design. These opening chapters take a look at how to create slick, professional-level sites, involving Flash MX's new drawing and motion capabilities and interactive techniques. The second section concentrates on ActionScript. Flash's resident coding environment is crucial to master, and taps into Flash's great strength—intuitive and interactive applications. Keith Peters and Todd Yard have buddied up on this section, and examine some of the most advanced ActionScript techniques around. Be warned—this section is not for the faint-hearted! Section three takes a look at Flash MX's greatly improved visual, audio and audiovisual capabilities. Its three chapters, written by Jez Turner and Alex White, concentrate on building a single site aimed at displaying rich media content. The final section is devoted to expounding a few myths about dynamic content using Flash. Its four chapters talk about general practice, before focusing in on specific areas, including introductions to PHP and XML, together with a look at Macromedia's brand new ColdFusion MX.
