The Ridiculously Simple Guide to Trello Scott La Counte, Take project management to the next level Working as a team can be challenging, but working remotely as a team can add a layer of complexity to the work; it can be difficult to monitor who is working on (or responsible for) different aspects of a project and where they are in terms of deliverables. Trello, which is a part of the enterprise software development company Atlassian, is a Kanban-style project management tool that can run natively on your computer or on the web. Trello lets you work collaboratively wherever you are and whatever you are working on. There are free and paid versions of the software, so it works for any budget and any company regardless of size. It also integrates with the software you already have. This book is not endorsed by Atlassian Corporation Plc. and should be considered unofficial.

First E.C. Conference on Solar Heating C. den Ouden,2012-12-06 Contributors to this Conference have shown the wide range of active and passive solar heating systems which have been researched, installed and monitored in recent years throughout western Europe and elsewhere. Yet much remains to be done if solar heating is to reach its full potential. The Conference Committee hopes that this record of the proceedings will provide a basis for the further development of these systems. Many difficulties have been surmounted in arriving at today's position. The foundations of the growing confidence of architects and engineers are to be found in the concerted programmes of research and development mounted by ty,'o of the sponsors of the Conference the European Community and the International Energy Agency. Some of the more tangible products of these programmes have been reported here: component and system behaviour has been subjected to rigorous scientific study; new test facilities have been founded; test procedures devised; simulation methods developed and evaluated; design rules formulated and checked against measured performance. It has been apparent here that the willingness to exchange information and experiences, which has always been a feature of the solar energy scene, remains as strong as ever. A further information-sharing initiative was noted on the part of another sponsor, UNESCO - the setting-up of the European Cooperative Network on Solar Energy, involving countries from both eastern and western Europe.
