Complexity, Security and Civil Society in East Asia Peter Hayes, Kiho Yi, 2015-06-22 *Complexity, Security and Civil Society in East Asia* offers the latest understanding of complex global problems in the region, including nuclear weapons, urban insecurity, energy, and climate change. Detailed case studies of China, North and South Korea, and Japan demonstrate the importance of civil society and 'civic diplomacy' in reaching shared solutions to these problems in East Asia and beyond. Each chapter describes regional civil society initiatives that tackle complex challenges to East Asia's security. In doing so, the book identifies key pressure points at which civil society can push for constructive changes—especially ones that reduce the North Korean threat to its neighbors. Unusually, this book is both theoretical and practical. *Complexity, Security and Civil Society in East Asia* presents strategies that can be led by civil society and negotiated by its diplomats to realize peace, security, and sustainability worldwide. It shows that networked civic diplomacy offers solutions to these urgent issues that official 'complex diplomacy' cannot. By providing a new theoretical framework based on empirical observation, this volume is a must read for diplomats, scholars, students, journalists, activists, and individual readers seeking insight into how to solve the crucial issues of our time.

The Feminist's Guide to Raising a Little Princess Devorah Blachor, 2017-11-07 "May God grant me the serenity to accept the color pink, the courage to not let my house become a shrine to pink and princesses, and the wisdom to know that pink is just a color, not a decision to never attend college in the hopes of marrying wealthy." - from *The Feminist's Guide to Raising a Little Princess* Smart, funny, and thought-provoking, this book shows feminist parents how to navigate their daughters' princess-obsessed years by taking a non-judgmental and positive approach. Devorah Blachor, an ardent feminist, never expected to be the parent of a little girl who was totally obsessed with the color pink, princesses, and all things girly. When her three-year-old daughter fell down the Disney Princess rabbit hole, she wasn't sure how to reconcile the difference between her parental expectations and the reality of her daughter's passion. In this book inspired by her viral New York Times Motherlode piece "Turn Your Princess-Obsessed Toddler Into a Feminist in Eight Easy Steps," Blachor offers insight, advice, and plenty of humor and personal anecdotes for other mothers who cringe each morning when their daughter refuses to wear anything that isn't pink. Her story of how she surrendered control and opened up—to her Princess Toddler, to pink, and to life—is a universal tale of modern parenting. She addresses important issues such as how to raise a daughter in a society that pressures girls and women to bury their own needs, conform to a beauty standard and sacrifice their own passions.

The Lands West of the Lakes Stephen C. Druce, 2009-01-01 The period 1200-1600 CE saw a radical transformation from simple chiefdoms to kingdoms (in archaeological terminology, complex chiefdoms) across lowland South Sulawesi, a region that lay outside the 'classical' Indicized parts of

Southeast Asia. The rise of these kingdoms was stimulated and economically supported by trade in prestige goods with other parts of island Southeast Asia, yet the development of these kingdoms was determined by indigenous, rather than imported, political and cultural precepts. Starting in the thirteenth century, the region experienced a transition from swidden cultivation to wet-rice agriculture; rice was the major product that the lowland kingdoms of South Sulawesi exchanged with archipelagic traders. Stephen Druce demonstrates this progression to political complexity by combining a range of sources and methods, including oral, textual, archaeological, linguistic and geographical information and analysis as he explores the rise and development of five South Sulawesi kingdoms, known collectively as Ajattappareng (the Lands West of the Lakes). The author also presents an inquiry into oral traditions of a historical nature in South Sulawesi. He examines their functions, their processes of transmission and transformation, their uses in writing history and their relationship to written texts. He shows that any distinction between oral and written traditions of a historical nature is largely irrelevant, and that the South Sulawesi chronicles, which can be found only for a small number of kingdoms, are not characteristic (as historians have argued) but exceptional in the corpus of indigenous South Sulawesi historical sources. The book will be of primary interest to scholars of pre-European-contact Southeast Asia, including historians, archaeologists, anthropologists, linguists and geographers, and scholars with a broader interest in oral tradition and the relationship between the oral and written registers.

Emerging zoonoses: eco-epidemiology, involved mechanisms and public health implications Rubén Bueno-Marí, A. Paulo Gouveia Almeida, Juan Carlos Navarro, 2015-07-06 Zoonoses are currently considered as one of the most important threats for public health worldwide. Zoonoses can be defined as any disease or infection that is naturally transmissible from vertebrate or invertebrate animals to humans and vice-versa. Approximately 75% of recently emerging infectious diseases affecting humans are diseases of animal origin; approximately 60% of all human pathogens are zoonotic. All types of potential pathogenic agents, including viruses, parasites, bacteria and fungi, can cause these zoonotic infections. From the wide range of potential vectors of zoonoses, insects are probably those of major significance due to their abundance, high plasticity and adaptability to different kinds of pathogens, high degrees of synanthropism in several groups and difficulties to apply effective programs of population control. Although ticks, flies, cockroaches, bugs and fleas are excellent insects capable to transmit viruses, parasites and bacteria, undoubtedly mosquitoes are the most important disease vectors. Mosquito borne diseases like malaria, dengue, equine encephalitis, West Nile, Mayaro or Chikungunya are zoonoses with increasing incidence in last years in tropical and temperate countries. Vertebrates can also transmit serious zoonoses, highlighting the role of some carnivorous animals in rabies dissemination or the spread of rodent borne diseases in several rural and urban areas. Moreover, the significance of other food borne zoonoses such as taeniasis, trichinellosis or toxoplasmosis may not been underestimated. According to WHO, FAO and OIE guidelines an emerging zoonotic disease can be defined as a zoonosis that is newly recognized or newly evolved, or that has occurred previously but shows an increase of incidence or expansion in geographical, host or vector range. There are many factors that can

provoke or accelerate the emergence of zoonoses, such as environmental changes, habitat modifications, variations of human and animal demography, pathogens and vectors anomalous mobilization related with human practices and globalization, deterioration of the strategies of vector control or changes in pathogen genetics. To reduce public health risks from zoonoses is absolutely necessary to acquire an integrative perspective that includes the study of the complexity of interactions among humans, animals and environment in order to be able to fight against these issues of primary interest for human health. In any case, although zoonoses represent significant public health threats, many of them still remain as neglected diseases and consequently are not prioritized by some health international organisms.

The Superstitious Muse David Bethea, 2018-05-30 For several decades David Bethea has written authoritatively on the mythopoetic thinking that lies at the heart of classical Russian literature, especially Russian poetry. His theoretically informed essays and books have made a point of turning back to issues of intentionality and biography at a time when authorial agency seems under threat of erasure and the question of how writers, and poets in particular, live their lives through their art is increasingly moot. The 'lichnost' (personhood, psychic totality) of the given writer is all-important, argues Bethea, as it is that which combines the specifically biographical and the capaciously mythical in verbal units that speak simultaneously to different planes of being. Pushkin's Evgeny can be one incarnation of the poet himself and an Everyman rising up to challenge Peter's new world order; Brodsky can be, all at once, Dante and Mandelstam and himself, the exile paying an Orphic visit to Florence (and, by ghostly association, Leningrad). This sort of metempsychosis, where the stories that constitute the Ur-texts of Russian literature are constantly reworked in the biographical myths shaping individual writers' lives, is Bethea's primary focus. This collection contains a liberal sampling of Bethea's most memorable previously published essays along with new studies prepared for this occasion.

Return Biao Xiang, Brenda S. A. Yeoh, Mika Toyota, 2013-10-10 Since the late 1990s, Asian nations have increasingly encouraged, facilitated, or demanded the return of emigrants. In this interdisciplinary collection, distinguished scholars from countries around the world explore the changing relations between nation-states and transnational mobility. Taking into account illegally trafficked migrants, deportees, temporary laborers on short-term contracts, and highly skilled émigrés, the contributors argue that the figure of the returnee energizes and redefines nationalism in an era of increasingly fluid and indeterminate national sovereignty. They acknowledge the diversity, complexity, and instability of reverse migration, while emphasizing its discursive, policy, and political significance at a moment when the tensions between state power and transnational subjects are particularly visible. Taken together, the essays foreground Asia as a useful site for rethinking the intersections of migration, sovereignty, and nationalism. Contributors: Sylvia Cowan, Johan Lindquist, Melody Chia-wen Lu, Koji Sasaki, Shin Hyunjoon, Mariko Asano Tamanoi, Mika Toyota, Carol Upadhyaya, Wang Cangbai, Xiang Biao, Brenda S. A. Yeoh

Boron in Soils and Plants R.W. Bell, Benjavan Rerkasem, 2012-12-06 The economic significance of boron (B) in agriculture, horticulture, and forestry has been beyond dispute for several decades. Even in the last two decades, the areas where B deficiency limits plant production has grown with increased reports from China, south Asia and southeast Asia. The present volume is reflective of the growing awareness of the significance of low soil B with reports from Australia, Bangladesh, Brazil, north, central and southern China, India, Nepal, and the North West Frontier Province of Pakistan contained herein. Boron deficiency also continues to be a problem for crop yield and quality in areas where B deficiency has been known for some time, for example in Germany and the USA. The problem of low soil B is not limited to effects on field crop yield, with papers reporting on depressed wood yield and quality in timber trees (Lambert et al.), and depressed fruit quality (Dong et al. ; Smith et al. ; Zude et al.) also appearing in the present volume. Globally, Shorrocks (1997) estimates that ?? tonnes of B fertiliser is applied annually in agriculture. The economic benefits from the use of B fertiliser have not been quantified but are clearly enormous. Paradoxically, the clear

economic imperatives for using B fertiliser on low B soils are not matched by a similar clarity of understanding of the role and functions of B in plants.

Addictive Substances and Neurological Disease Ronald Ross Watson, Sherma Zibadi, 2017-02-18 Addictive Substances and Neurological Disease: Alcohol, Tobacco, Caffeine, and Drugs of Abuse in Everyday Lifestyles is a complete guide to the manifold effects of addictive substances on the brain, providing readers with the latest developing research on how these substances are implicated in neurological development and dysfunction. Cannabis, cocaine, and other illicit drugs can have substantial negative effects on the structure and functioning of the brain. However, other common habituating and addictive substances often used as part of an individual's lifestyle, i.e., alcohol, tobacco, caffeine, painkillers can also compromise brain health and effect or accentuate neurological disease. This book provides broad coverage of the effects of addictive substances on the brain, beginning with an overview of how the substances lead to dysfunction before examining each substance in depth. It discusses the pathology of addiction, the structural damage resulting from abuse of various substances, and covers the neurobiological, neurodegenerative, behavioral, and cognitive implications of use across the lifespan, from prenatal exposure, to adolescence and old age. This book aids researchers seeking an understanding of the neurological changes that these substances induce, and is also extremely useful for those seeking potential treatments and therapies for individuals suffering from chronic abuse of these substances. Integrates current research on the actions of addictive substances in neurological disease Includes functional foods, such as caffeine beverages, that have habituating effects on the brain Provides a synopsis of key ideas associated with the consequences of addictive and habituating lifestyle substances

Against Expression Craig Dworkin, Kenneth Goldsmith, 2011-01-17 Charles Bernstein has described conceptual poetry pregnant with thought. Against Expression, the premier anthology of conceptual writing, presents work that is by turns thoughtful, funny, provocative, and disturbing. Editors Craig Dworkin and Kenneth Goldsmith chart the trajectory of the conceptual aesthetic from early precursors such as Samuel Beckett and Marcel Duchamp through major avant-garde groups of the past century, including Dada, Oulipo, Fluxus, and language poetry, to name just a few. The works of more than a hundred writers from Aasprong to Zykov demonstrate a remarkable variety of new ways of thinking about the nature of texts, information, and art, using found, appropriated, and randomly generated texts to explore the possibilities of non-expressive language. --Book Jacket.

Precolumbian Water Management Lisa J. Lucero, Barbara W. Fash, 2022-08-16 Among ancient Mesoamerican and Southwestern peoples, water was as essential as maize for sustenance and was a driving force in the development of complex society. Control of water shaped the political, economic, and religious landscape of the ancient Americas, yet it is often overlooked in Precolumbian studies. Now one volume offers the latest thinking on water systems and their place within the ancient physical and mental landscape of the region. Precolumbian Water Management examines water management from both economic and symbolic perspectives. Water management facilities, settlement patterns, shrines, and water-related imagery associated with civic-ceremonial and residential architecture provide evidence that water systems pervade all aspects of ancient society. Through analysis of such data, the contributors seek to combine an understanding of imagery and the religious aspects of water with its functional components, thereby presenting a unified perspective of how water was conceived, used, and represented in ancient greater Mesoamerica. The collection boasts broad chronological and geographical coverage—from the irrigation networks of Teotihuacan to the use of ritual water technology at Casas Grandes—that shows how procurement and storage systems were adapted to local conditions. The articles consider the mechanisms that were used to build upon the sacredness of water to enhance political authority through time and space and show that water was not merely an essential natural resource but an important spiritual one as well, and that its manipulation was socially far more complex than might appear at first glance. As these papers reveal, an understanding of materials associated with water can contribute

much to the ways that archaeologists study ancient cultural systems. Precolumbian Water Management underscores the importance of water management research and the need to include it in archaeological projects of all types.
