Intercultural User Interface Design Rüdiger Heimgärtner,2019-06-25 The path for developing an internationally usable product with a human-machine interface is described in this textbook, from theory to conception and from design to practical implementation. The most important concepts in the fields of philosophy, communication, culture and Ethnocomputing as the basis of intercultural user interface design are explained. The book presents directly usable and implementable knowledge that is relevant for the processes of internationalization and localization of software. Aspects of software ergonomics, software engineering and human-centered design are presented in an intercultural context; general and concrete recommendations and checklists for immediate use in product design are also provided. Each chapter includes the target message, its motivation and theoretical justification as well as the practical methods to achieve the intended benefit from the respective topic. The book opens with an introduction illuminating the background necessary for taking culture into account in Human Computer Interaction (HCI) design. Definitions of concepts are followed by a historical overview of the importance of taking culture into account in HCI design. Subsequently, the structures, processes, methods, models, and approaches concerning the relationship between culture and HCI design are illustrated to cover the most important questions in practice.

**Population Biobank Studies: A Practical Guide** Zhengming Chen,2020-12-09 This book describes some of the key epidemiological principles, scientific approaches and quality assurance frameworks required to design and conduct

biobank studies in various settings. Using examples from contemporary biobanks, the book addresses the design features and practical procedures needed in order to launch and manage biobank studies, including consent and regulatory approval, the organisation of field work, management of data and biological samples, follow-up and verification of disease outcomes, development of IT systems for data collection, quality assurance and study management. Over the last two decades, several large biobank studies have been initiated in different populations, intended to greatly enhance the development of precision medicine. Contemporary biobank studies are extremely large and complex, and involve several decades of follow-up. Such studies pose major challenges in terms of ensuring rapid recruitment, obtaining high-quality data, minimising loss to follow-up, reliably classifying disease outcomes, and optimising the use of the biological samples collected. In this regard, the key to success lies not in planning the perfect study, but in planning the most appropriate, reliable, sustainable and future-proof study given the practical constraints of available resources, time and capacity. The authors of this handbook are epidemiologists, clinicians, software engineers, and laboratory and data scientists with extensive experience in conducting large biobank studies. The eight chapters can be read separately or together, and provide readers with essential information on how to design, implement and manage these studies. The state-of-the-art, innovative and scalable approaches and methodologies presented here are intended to stimulate the development of further population-based and hospital-based biobank studies in diverse populations.

Routledge Encyclopedia of Translation Technology Sin-Wai Chan, 2014-11-13  
The Routledge Encyclopedia of Translation Technology provides a state-of-the

art survey of the field of computer-assisted translation. It is the first definitive reference to provide a comprehensive overview of the general, regional and topical aspects of this increasingly significant area of study. The Encyclopedia is divided into three parts: Part One presents general issues in translation technology, such as its history and development, translator training and various aspects of machine translation, including a valuable case study of its teaching at a major university; Part Two discusses national and regional developments in translation technology, offering contributions covering the crucial territories of China, Canada, France, Hong Kong, Japan, South Africa, Taiwan, the Netherlands and Belgium, the United Kingdom and the United States Part Three evaluates specific matters in translation technology, with entries focused on subjects such as alignment, bitext, computational lexicography, corpus, editing, online translation, subtitling and technology and translation management systems. The Routledge Encyclopedia of Translation Technology draws on the expertise of over fifty contributors from around the world and an international panel of consultant editors to provide a selection of articles on the most pertinent topics in the discipline. All the articles are self-contained, extensively cross-referenced, and include useful and up-to-date references and information for further reading. It will be an invaluable reference work for anyone with a professional or academic interest in the subject.

**Institutional Translator Training** Tomáš Svoboda, Łucja Biel, Vilelmini Sosoni, 2022-12-30 This collection surveys the translator training landscape in international organizations on a global scale, offering a state-of-the-art view on institutional translator training research and practical takeaways for stakeholders. The volume's focus on training brings a unique perspective

to existing research on institutional translation, which has tended to single out such themes as agency, professionalism, and quality. The book is divided into three sections, with the first outlining the competences required of institutional translators, the second exploring training practices at the university level and on the job, for novices and professionals, across a range of settings, and the third providing a synthesis of the above. Contributions draw on findings from studies in both institutional desiderata and existing training programmes from diverse geographic contexts towards situating the discussion through a global lens. In linking together competences and training practices, the book enhances collective knowledge of institutional translation and provides valuable insights for universities and institutions that work with translators on both international and national scales. This book will be key reading for scholars in translation studies, particularly those interested in institutional translation and translator training, as well as active professionals. **Informationsstrukturierung in chinesischen und deutschen Texten** Jing Jin, 2015 Die unterschiedliche Informationsstrukturierung chinesischer und deutscher Texte bildet den Ausgangspunkt dieser Untersuchung. Während in der deutschen Kultur eine gewisse 'Direktheit' in der Themenentfaltung erwartet wird, wird in der chinesischen Kultur in ähnlichen Situationen eine stärkere 'Indirektheit' verlangt. In der Übersetzungspraxis wird diesen Unterschieden bis jetzt leider immer noch zu wenig Aufmerksamkeit geschenkt. Die meisten deutschsprachigen Übersetzungen chinesischer induktiver Texte sind hinsichtlich der Informationsstruktur ausgangstextnahe Übersetzungen. In dieser Arbeit wird zum ersten Mal die Problematik der unterschiedlichen Textorganisation von chinesischen und deutschen Firmen-Selbstdarstellungen im Internet aus der Perspektive der Übersetzungswissenschaft diskutiert. Ihre Ergebnisse können auch für die Untersuchung der Übersetzungsprobleme chinesischer induktiv strukturierter Texte in andere westliche Sprachen, deren Textorganisation deduktiv ist, von Nutzen sein.

**Translation and Localisation in Video Games** Miguel Á. Bernal-Merino, 2014-09-19 This book is a multidisciplinary study of the translation and localisation of video games. It offers a descriptive analysis of the industry - understood as a global phenomenon in entertainment - and aims to explain the norms governing present industry practices, as well as game localisation processes. Additionally, it discusses particular translation issues that are unique to the multichannel nature of video games, in which verbal and nonverbal signs must be cohesively combined with interactivity to achieve maximum playability and immerse players in the game's virtual world. Although positioned within the theoretical framework of descriptive translation studies, Bernal-Merino incorporates research from audiovisual translation, software localisation, computer assisted translation, comparative literature, and video game production. Moving beyond this framework, Translation and Localisation in Video Games challenges some of the basic tenets of translation studies and proposes changes to established and unsatisfactory processes in the video game and language services industries.

**Wavelength Converters in Optical Networks** K R Venugopal, 2008-07-25 The first generation networks built before the emergence of fiber optics and the second generation networks which used fiber as a replacement for copper links in Local Area network (LAN), Metropolitan Area Network (MAN) and Wide Area Network (WAN) are not adequate to meet the emerging integrated demands of the communication applications. Huge bandwidth must be provided to support applications such as super-computer interconnect, videoconferencing, etc., co-existing with smaller bandwidth requirements of data, audio, and many other applications for thousands of end-users. Wavelength Converters in Optical Networks deals with the third generation networks that use Wavelength

Division Multiplexing (WDM), wavelength routed optical networking technology. This technology can efficiently utilize the enormous bandwidth of the optical fiber and has been able to meet the emerging integrated demands of the communication applications.

*A Practical Guide to Localization* Bert Esselink, 2000 Translation technology has evolved quickly with a large number of translation tools available. Other major changes include the addition of chapters on internationalization, software quality assurance, desktop publishing and localization support. There is a focus on translators who want to learn about localization and translation technology.

*The Game Localization Handbook* Heather Chandler, Stephanie O'Malley Deming, 2011-09-19 Authored by two internationally known experts in game localization, this text is a comprehensive, up-to-date reference for information about how to localize software for games, whether they are developed for the PC, console, or other platforms.
