How to Make Sense of Any Mess Abby Covert, 2014 Everything is getting more complex. It is easy to be overwhelmed by the amount of information we encounter each day. Whether at work, at school, or in our personal endeavors, there's a deepening (and inescapable) need for people to work with and understand information. Information

architecture is the way that we arrange the parts of something to make it understandable as a whole. When we make things for others to use, the architecture of information that we choose greatly affects our ability to deliver our intended message to our users. We all face messes made of information and people. This book defines the word mess the same way that most dictionaries do: A situation where the interactions between people and information are confusing or full of difficulties. - Who doesn't bump up against messes made of information and people every day? How to Make Sense of Any Mess provides a seven step process for making sense of any mess. Each chapter contains a set of lessons as well as workbook exercises architected to help you to work through your own mess.

Professional Search Engine Optimization with PHP Cristian Darie, Jaimie Sirovich, 2007-04-18 Maybe you're a great programmer or IT professional, but marketing isn't your thing. Or perhaps you're a tech-savvy search engine marketer who wants a peek under the hood of a search engine optimized web site. Search engine marketing is a field where technology and marketing are both critical and interdependent, because small changes in the implementation of a web site can make you or break you in search engine rankings. Furthermore, the fusion of technology and marketing know-how can create web site features that attract more visitors. The mission of this book is to help web developers create web sites that rank well with the major search engines, and to teach search engine marketers how to use technology to their advantage. We assert that neither marketing nor IT can exist in a vacuum, and it is essential that they not see themselves as opposing forces in an organization. They must work together. This book aims to educate both sides in that regard.

Apollo's Eye Denis Cosgrove, 2003-10-17 This award-winning science history explores our evolving image of the globe—and how it has shifted our relationship to the world. Long before we had the ability to photograph the earth from space—to see our planet as it would be seen by the Greek god Apollo—images of the earth as a globe had captured popular imagination. In *Apollo's Eye*, geographer Denis Cosgrove examines the historical implications for the West of conceiving and representing the earth as a globe: a unified, spherical body. Cosgrove traces how ideas of globalism and globalization have shifted historically in relation to changing images of the earth, from antiquity to the Space Age. He connects the evolving image of a unified globe to politically powerful conceptions of human unity. Winner of the Association of American Publishers Professional and Scholarly Publishing Award in Geography & Earth Sciences

The Age of Agility Veronica Schmidt Harvey, Kenneth P. De Meuse, 2021 The Age of Agility: Building Learning Agile Leaders and Organizations focuses on learning agility, one of the most important trends in the business world during the past decade. Some surveys have found it was the most frequently used criterion to measure leadership potential. Despite this popularity there are fundamental questions that need to be answered such as (a) What specifically is learning agility? (b) How many facets or dimensions does it have? (c) How do we measure it? and (d) Can it be developed? It appears that much of what is known about the construct of learning agility has been gleaned from its application by practitioners. While this knowledge is an extremely useful place to begin, there is an urgent need to undergird this understanding with science. The purpose of this edited book is to systematically examine the construct through a more scholarly lens. Over 50 authors - both academic researchers and talent management practitioners - have contributed to the contents. The goal is to enhance knowledge of learning agility, distilling and synthesizing scientific evidence with best practices--
