Fat for Fuel Joseph Mercola, 2017 For over a century, we've accepted the scientific consensus that cancer results from genetic disease due to

chromosomal damage in cell nuclei. But what if cancer isn't a genetic disease after all? What if scientists are chasing a flawed paradigm, and cancer isn't a disease of damaged DNA but rather of defective metabolism as a result of mitochondrial dysfunction? What if that startling truth could revolutionize our understanding of other diseases as well--and show us a radical new path to optimal health? In this groundbreaking guide, the first of its kind, New York Times best-selling author and leading natural-health practitioner Joseph Mercola explains how nearly all disease is caused by defective metabolic processes. Then he reveals what's really causing your metabolism to go haywire: damage and dysfunction in the mitochondria, thousands of which are at work in nearly every cell in your body, generating 90 percent of the energy you need to stay alive and well. When mitochondria become damaged in large numbers, it is impossible to stay healthy. Dr. Mercola shows you that you can take control of your health simply by giving your body the proper fuel--and it's not what you've likely been led to believe. A ketogenic diet, very low in carbohydrates and high in healthy fats, is the way to optimize the biochemical pathways that suppress disease and support healing. And the benefits can be astonishing--not only in treating or preventing serious illness, but in boosting your brainpower, increasing your energy, helping you lose weight and keep it off, and much more. As you read this book, you'll learn in clear, rational terms how your body works at a molecular level. You'll finally understand the type of fuel it's designed to burn in the most

efficient way possible. You'll find detailed guidelines for starting and sticking with a ketogenic eating plan. And you won't have to wait a decade or two for metabolic mitochondrial therapy to make its way into the mainstream. You can build a healthier body and brain at the cutting edge of this exciting new discipline, starting right now.

Freedom from Violence and Lies Simon Karlinsky, 2013 *Freedom from Violence and Lies* is a collection of forty-one essays by Simon Karlinsky (1924–2009), a prolific and controversial scholar of modern Russian literature, sexual politics, and music who taught in the University of California, Berkeley's Department of Slavic Languages and Literatures from 1964 to 1991. Among Karlinsky's full-length works are major studies of Marina Tsvetaeva and Nikolai Gogol, Russian Drama from Its Beginnings to the Age of Pushkin; editions of Anton Chekhov's letters; writings by Russian émigrés; and correspondence between Vladimir Nabokov and Edmund Wilson. Karlinsky also wrote frequently for professional journals and mainstream publications like the New York Times Book Review and the Nation. The present volume is the first collection of such shorter writings, spanning more than three decades. It includes twenty-seven essays on literary topics and fourteen on music, seven of which have been newly translated from the Russian originals.

Riding Rockets Mike Mullane, 2007-02-06 Selected as a Mission Specialist in 1978 in the first group of shuttle astronauts, Mike Mullane completed three missions and logged 356 hours aboard the Discovery and Atlantis shuttles. It

was a dream come true. As a boy, Mullane could only read about space travel in science fiction, but the launch of Sputnik changed all that. Space flight became a possible dream and Mike Mullane set out to make it come true. In this absorbing memoir, Mullane gives the first-ever look into the often hilarious, sometime volatile dynamics of space shuttle astronauts - a class that included Vietnam War veterans, feminists, and propeller-headed scientists. With unprecedented candour, Mullane describes the chilling fear and unparalleled joy of space flight. As his career centred around the Challenger disaster, Mullane also recounts the heartache of burying his friends and colleagues. And he pulls no punches as he reveals the ins and outs of NASA, frank in his criticisms of the agency. A blast from start to finish, *Riding Rockets* is a straight-from-the-gut account of what it means to be an astronaut, just in time for this latest generation of stargazers.

EnvStats Steven P. Millard, 2013-10-16 This book describes EnvStats, a new comprehensive R package for environmental statistics and the successor to the S-PLUS module EnvironmentalStats for S-PLUS (first released in 1997). EnvStats and R provide an open-source set of powerful functions for performing graphical and statistical analyses of environmental data, bringing major environmental statistical methods found in the literature and regulatory guidance documents into one statistical package, along with an

extensive hypertext help system that explains what these methods do, how to use these methods, and where to find them in the environmental statistics literature. EnvStats also includes numerous built-in data sets from regulatory guidance documents and the environmental statistics literature. This book shows how to use EnvStats and R to easily:

- * graphically display environmental data
- * plot probability distributions
- * estimate distribution parameters and construct confidence intervals on the original scale for commonly used distributions such as the lognormal and gamma, as well as do this nonparametrically
- * estimate and construct confidence intervals for distribution percentiles or do this nonparametrically (e.g., to compare to an environmental protection standard)
- * perform and plot the results of goodness-of-fit tests
- * compute optimal Box-Cox data transformations
- * compute prediction limits and simultaneous prediction limits (e.g., to assess compliance at multiple sites for multiple constituents)
- * perform nonparametric estimation and test for seasonal trend (even in the presence of correlated observations)
- * perform power and sample size computations and create companion plots for sampling designs based on confidence intervals, hypothesis tests, prediction intervals, and tolerance intervals
- * deal with non-detect (censored) data
- * perform Monte Carlo simulation and probabilistic risk assessment
- * reproduce specific examples in EPA guidance documents

EnvStats combined with other R packages (e.g., for spatial analysis) provides the environmental scientist, statistician, researcher, and technician with

tools to “get the job done!”

MUMBLINGS FROM THE DEPTH JITHU BIJI THOMAS,2018-05-16 An amputated soldier yearns to see the world and gets a brief glimpse of the beauty around him through the loaned eye of another. A brash and over-confident star athlete on whom a nation's hope lies takes a walk down the memory lane. The dreams of an Iraqi football player gets shattered by the great dictator which leads him to yearn for death to come knocking on his door. A Titanic survivor reminisces his bitter survival. And many more. What did these people have in common? Or maybe, there must have been something that attached these different people who were spread across different walks of life with varying history and time periods. The truth is that these people aid heed to the voices in their heart. The mumblings of love, despair, dreams, gratitude, guilt, hope and many more. These mumblings made them common by a single thread. The book isn't a casual read and the author urges the reader to lend his mind. The collection of short stories along with the prose at the beginning of each story would take the reader to a roller coaster ride of reality and truth leaving aside all the mirage that our modern lifestyle has forced onto us. Passing through various seasons and times, join a journey that would make you also listen to the mumblings of your own heart – the mumblings from your own depth.
