Rock and Roll Fantasy? Ronnie Phillips,2012-11-19 We are in an era where developments in both technology and musical style have coalesced to produce the greatest period of change in the music industry since the invention of recorded sound. Globalization, the Internet, and digital technology are now opening up possibilities for more artists to be innovative and financially successful. But new music requires new ways of doing business. For more artists to be better off requires new business models to replace those that dominated the 20th century. Integrating insights from economics, management, and intellectual property law, the author explores the dynamics of entrepreneurship and innovation in the music industry, and offers such provocative assessments as these: · The Beatles might never have broken up if they had the kind of two-tier contracts – as band members and as solo artists – that are common in the music industry today. · Buddy Holly would likely have avoided his tragic death in a plane crash at age 22 if his 1959 tour had been sponsored by a company like Coca Cola because today's corporatized tours are vastly better financed and organized than the haphazard efforts of the 1950s. · The economic value of albums by the likes of Elvis and Michael Jackson has risen significantly since their deaths – the ironic byproduct of the way their behavior tarnished their own brands while they were alive. · Diana Ross might never have quit The Supremes if she had known that one-third of the artists in the 1960s who quit the group had charting careers of only one year. · Thomas Edison's invention of the phonograph led to the modern record industry, but he is really the godfather of computer programs like Garageband which have created home recording studios. The collapse of the Soviet Union threatened the sound of rock and roll but an American entrepreneur saved the day.

The Audiovisual Cataloging Current Sandra K. Roe,2013-10-18 Examine crucial issues for audiovisual cataloging-from a variety of perspectives! This vital book addresses both current and historic issues related to audiovisual materials and cataloging. It covers the current cataloging rules for sound recordings (popular music and nonmusic recordings), videorecordings (including DVDs), electronic resources (whether accessed locally or remotely), three-dimensional objects and realia, and kits. Three historical articles chronicle the history of audiovisual catalog in general, the history of cataloging computer files, and the history of The Thesaurus for Graphic Materials. A section on audiovisual materials and subject access issues includes a chapter which proposes form/genre terms for moving-image materials and a special library's creation and use of a new thesaurus and its availability to assist online catalog users. Finally, four contributions examine audiovisual materials and cataloging from the perspectives of different library types: school, public, academic, and special. The Audiovisual Cataloging Current provides case studies that show: how the National Library of Medicine produces, collects, and catalogs non-print materials the differences between the Moving Image Genre-Form Guide and Library of Congress Subject Headings, with recommendations for improving LCSH as a tool and an exhaustive list of LCSH terms how libraries and organized cataloging groups developed the Chapter 9 descriptive cataloging rules in AACR2 how the Westchester Library System created a user-friendly online catalog for audiovisual materials how the Illinois Fire Service Library improved firefighters'subject access to nonprint fire emergency materials how the National Library of Medicine promotes audiovisual formats and much more!

Game Sound Technology and Player Interaction: Concepts and Developments Grimshaw, Mark,2010-09-30 Game Sound Technology and Player Interaction: Concepts and Developments researches both how game sound affects a player psychologically, emotionally, and physiologically, and how this relationship itself impacts the design of computer game sound and the development of technology. This compilation also applies beyond the realm of video games to other types of immersive sound, such as soundscape design, gambling machines, emotive and fantastical sound to name a few. The application for this research is wide-ranging, interdisciplinary, and of primary importance for academics and practitioners searching for the right sounds.

The Airwaves of New York Bill Jaker, Frank Sulek, Peter Kanze, 2015-05-07 From its inception in New York City, radio dramatically changed the city. The five boroughs became, in some ways, more united through the medium, as common concerns were aired and given wider attention. But as radio focused more on entertainment, the city lost the last of its small town origins, as people left the front stoop for the living room. This heavily illustrated history traces the development and influence of AM radio in the New York metropolitan area, as well as providing technical data and program schedules of the stations.

The Blues Lyric Formula Michael Taft, 2013-10-18 This book is the first rigorous and detailed exploration of exactly how blues singers used formulas to create songs, and it more than amply fills the gap in the the study of the blues, where the structure and content of the lyrics have been less fully explored than the musical form. Focusing on the songs recorded by African-American singers for pre-World War Two commercial recording companies, this is an excellent structural analysis of the formulaic composition of blues lyrics. This book gives a step-by-step description of the rules implicit in this formulaic structure and inspires new discussion of lyric structures. A wide array of readers will find this insightful and informative: from students of African-American music, cultural studies, history and linguistics, to Blues fans fascinated by exactly how the lyrics of this influential music style are written.
