Be Angry, But Don't Blow It Lisa Bevere,2019-08-27 New York Times best-selling author Lisa Bevere encourages women to stop hurting the ones they love, to learn to say things so they'll be heard, to get rid of bitterness, and to find forgiveness for themselves. Conflict – it's unavoidable. Therefore, each of us must learn to manage it successfully. But what if we can't? What if anger has us out of control and out of hand? You're passionate and losing your cool. Or perhaps worse – you're depressed and wrought with fear because you've turned the destructive force of rage on yourself. Anger controlled Lisa for years, exacting a devastating toll upon her life and relationships. Desperate, Lisa cried out to God . . . and found help. If you, too, are at a turning point – longing for change yet stuck in a whirlwind of fury and rage – Be Angry, But Don't Blow It will help you regain control. Sharing all she has learned about handling this powerful emotion, Lisa discusses how you can: Learn to say things so you'll be heard Move beyond mere apologies into genuine confession Yank the defiling root of bitterness Find forgiveness and release for yourself This book interweaves powerful scriptural truths with practical, personal examples and prayer. Readers will learn to channel passionate emotions constructively. Anger is not wrong, it is how we express it and how far we take it that determines the outcome. For those really ready to be honest and get free, this book will light the way. Be Angry, But Don't Blow It also includes a three-week program to help move you from destructive to constructive anger and recapture the healthy passion God wants you to have.

Type II Blow Up Manifolds for the Energy Supercritical Semilinear Wave Equation Charles Collot,2018-03-19 Our analysis adapts the robust energy method developed for the study of energy critical bubbles by Merle-Raphaël-Rodnianski, Raphaël-Rodnianski and Raphaël-Schweyer, the study of this issue for the supercritical semilinear heat equation done by Herrero-Velázquez, Matano-Merle and Mizoguchi, and the analogous result for the energy supercritical Schrödinger equation by Merle-Raphaël-Rodnianski.

On Stability of Type II Blow Up for the Critical Nonlinear Wave Equation in \mathbb{R}^{3+1} Joachim K Krieger,2021-02-10 The author shows that the finite time type II blow up solutions for the energy critical nonlinear wave equation $\Box u = -u^5$ on \mathbb{R}^{3+1} constructed in Krieger, Schlag, and Tataru (2009) and Krieger and Schlag (2014) are stable along a co-dimension three manifold of radial data perturbations in a suitable topology, provided the scaling parameter $\lambda(t) = t^{-1-\nu}$ is sufficiently close to the self-similar rate, i. e. $\nu > 0$ is sufficiently small. Our method is based on Fourier techniques adapted to time dependent wave operators of the form $-\partial_t^2 + \partial_r^2 + \frac{2r}{t}\partial_r + V(\lambda(t)r)$ for suitable monotone scaling parameters $\lambda(t)$ and potentials $V(r)$ with a resonance at zero.

Blow-up for Higher-Order Parabolic, Hyperbolic, Dispersion and Schrödinger Equations Victor A. Galaktionov,Enzo L. Mitidieri,Stanislav I. Pohozaev,2014-09-22 Blow-up for Higher-Order Parabolic, Hyperbolic, Dispersion and Schrödinger Equations shows how four types of higher-order nonlinear evolution partial differential equations (PDEs) have many commonalities through their special quasilinear degenerate representations. The authors present a unified approach to deal with these quasilinear PDEs. The book first studies the particular self-similar singularity solutions (patterns) of the equations. This approach allows four different classes of nonlinear PDEs to be treated simultaneously to establish their striking common features. The book describes many properties of the equations and examines traditional questions of existence/nonexistence, uniqueness/nonuniqueness, global asymptotics, regularizations, shock-wave theory, and various blow-up singularities. Preparing readers for more advanced mathematical PDE analysis, the book demonstrates that quasilinear degenerate higher-order PDEs, even exotic and awkward ones, are not as daunting as they first appear. It also illustrates the deep features shared by several types of nonlinear PDEs and encourages readers to develop further this unifying PDE approach from other viewpoints.

Blow the House Down Robert Baer,2007-01-02 Former CIA operative Robert Baer pushes fiction to the absolute limit in this riveting and unnervingly plausible alternative history of 9/11. Veteran CIA officer Max Waller has long been obsessed with the abduction and murder of his Agency mentor. Though years of digging yield the name of a suspect—an Iranian math genius turned terrorist—the trail seems too cold to justify further effort. Then Max turns up a photograph of the man standing alongside Osama bin Laden and a mysterious westerner whose face has been cut out, feeding Max’s suspicion. When the first official to whom Max shows the photo winds up dead, the out-of-favor agent suddenly finds himself the target of dark forces within the intelligence community who are desperate to muzzle him. Eluding a global surveillance net, Max—in the summer of 2001—begins tracking the spore of a complex conspiracy, meeting clandestinely with suicide bombers and Arab royalty and ultimately realizing the Iranian he’d sought for a decades-old crime is actually at the nexus of a terrifying plot. Showing off dazzling tradecraft and an array of richly textured backdrops, and filled with real names and events, *Blow the House Down* deftly balances fact and possibility to become the first great thriller to spring from the war on terrorism.
