Smart Agents for the Industry 4.0 Max Hoffmann,2019-09-11 Max Hoffmann describes the realization of a framework that enables autonomous decision-making in industrial manufacturing processes by means of multi-agent systems and the OPC UA meta-modeling standard. The integration of communication patterns and SOA with grown manufacturing systems enables an upgrade of legacy environments in terms of Industry 4.0 related technologies. The added value of the derived solutions are validated through an industrial use case and verified by the development of a demonstrator that includes elements of self-optimization through Machine Learning and communication with high-level planning systems such as ERP. About the Author: Dr.-Ing. Max Hoffmann is a scientific researcher at the Institute of Information Management in Mechanical Engineering, RWTH Aachen University, Germany, and leads the group "Industrial Big Data". His research emphasizes on production optimization by means of data integration through interoperability and communication standards for industrial manufacturing and integrated analysis by using Machine Learning and stream-based information processing.

Intelligent Agents and Their Applications Zhengxin Chen,Nikhil Ichalkaranje,2013-03-20 Intelligent agents are one of the most promising business tools in our information rich world. An intelligent agent consists of a software system capable of performing intelligent tasks within a dynamic and unpredictable environment. They can be characterised by various attributes including: autonomous, adaptive, collaborative,

communicative, mobile, and reactive. Many problems are not well defined and the information needed to make decisions is not available. These problems are not easy to solve using conventional computing approaches. Here, the intelligent agent paradigm may play a major role in helping to solve these problems. This book, written for application researchers, covers a broad selection of research results that demonstrate, in an authoritative and clear manner, the applications of agents within our information society.

Intelligent Agents II - Agent Theories, Architectures, and Languages Michael Wooldridge,Jörg Müller,Milind Tambe,1996-01-17 This book is based on the second International Workshop on Agent Theories, Architectures, and Languages, held in conjunction with the International Joint Conference on Artificial Intelligence, IJCAI'95 in Montreal, Canada in August 1995. The 26 papers are revised final versions of the workshop presentations selected from a total of 54 submissions; also included is a

comprehensive introduction, a detailed bibliography listing 355 relevant publications, and a subject index. The book is structured into seven sections, reflecting the most current major directions in agent-related research. Together with its predecessor, Intelligent Agents, published as volume 890 in the LNAI series, this book provides a timely and comprehensive state-of-the-art report.

Intelligent Agents for Telecommunication Applications Sahin Albayrak,Francisco J. Garijo,1998-06-24 This book constitutes the refereed proceedings of the Second International Workshop on Intelligent Agents for Telecommunication Applications, IATA'98, held in Paris, France, in July 1998, in conjunction with the 1998 Agents World Conference. The book presents 17 revised full papers carefully selected for inclusion in the volume. The book is divided into topical sections on network architecture, network configuration and planning, network optimization, network management, agent-based architectures for service applications.

Intelligent Agents and Multi-Agent Systems Bui The Duy,Tuong Vinh Ho,Quang Thuy Ha,2008-12-11 PRIMA 2008 was the 11th in a series of conferences gathering researchers - voted to developing intelligent agents and multi-agent technologies from Asia and the Paci?c regions. From its ?rst incarnation over a decade ago, PRIMA has emerged as a signi?cant international forum, facilitating the exchange and dissemination of innovative research from around the globe. PRIMA 2008 was held in Vietnam, a tribute to this country's emerging s- enti?c vitality and importance as a developing innovation center. The Program Committee received 56 submissions from 20 countries. Many of these papers are the work of PhD or Masters students from Asian countries including - rea,

Japan, Indonesia, Malaysia, Iran, India, and Vietnam. In accordance with the rules, each submission was carefully peer-reviewed by three Program C- mittee referees. Only 19 submissions were accepted as regular papers, with a competitive rate of 33%. Additionally, the Program Committee decided to accept 22 short papers mainly written by graduate students, allowing our young colleagues an opp- tunity to present their work and new perspectives. These fresh perspectives enhanced our experienced of the conference and complemented the high quality of the professional papers submitted.

Intelligent Agents for Telecommunications Applications Sahin Albayrak,1998 Intelligent agent and distributed AI (DAI) approaches attach specific conditions to cooperative exchanges between intelligent systems, that go far beyond simple functional interoperability. Ideally, systems that pursue local or global goals, coordinate their actions, share knowledge, and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse-grained systems. The infrastructure of telecommunications is a world in transition. There are a number of trends that contribute to this: convergence of traditional telephony and data network worlds, blurring of boundaries between public and private networks, complementary evolution of wireline, wireless, and cable network infrastructures, the emergence of integrated broadband multimedia networks and, of course, the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems. Telecommunications applications pose strong requirements to agents such as: reliability, real-time performance, openness, security management and other integrated management, and mobility. In order to fulfil

their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.

This makes the Handbook of New Media de facto required reading for anybody involved in new media and its understanding.… The aim of this book was ambitious and the size of the book is impressive but the result is there, a handbook of new media, which will remain a key referance in new media research for some considerable time´ - Learning Media Technology `A landmark volume that provides a foundation stone for a new subject - the study of new media. It is stunningly well-edited, offering a very high standard of original contributions in a skilfully orchestrated and organised textbook´ - James Curran, Goldsmiths College, University of London `This is the first major review of interactive technologies and their cultural and social context. This is more than a welcome addition to one´s library; it is the authoritative overview of international research perspectives on interactive media technologies by leading scholars around the world´ - Ellen Wartella, University of Texas, Austin `The Handbook of New Media is a landmark for the study of information and communication technologies within the field of communication. Its international team of editors and authors has brought together insights gained from over two decades of scholarly research. This indispensable reference demonstrates an increased maturity and stature for new media research within the field´ -

William H Dutton, University of Southern California `A truly comprehensive and authoritative volume. This Handbook will be an absolutely essential text for anyone concerned with social aspects of the new media´ - Kevin Robins, Goldsmiths College, University of London The past 20 years have seen remarkable growth in research and scholarship addressing new information and communication technologies and their social contexts. Often called `new media´ research, this growing field is both international and interdisciplinary. The Handbook of New Media sets out boundaries of new media research and scholarship and provides a definitive statement of the current state-of-the-art of the field. Divided into six sections covering major problem areas of research, the Handbook includes an introductory essay by the editors and a concluding essay by Ron Rice. Each chapter, written by an internationally renowned scholar, provides a review of the most significant social research findings and insights. This Handbook will be an indispensable volume on the personal bookshelves of all scholars working in the area, required reading for graduate students, a reference work for established researchers and newcomers to new media scholarship, and an intellectual benchmark for the field.

Results Matter Nancy Gardner,2015-11-05 Real estate is the single most expensive investment most people make. How is it then that we find ourselves hiring real estate agents who aren't up to the task? As a buyer or seller of real estate you'll spend thousands of dollars on commission fees. Now more than ever, you want your money working for you in buying and selling decisions. Results Matter is written for buyers and sellers who want the objective information they will need to hire a qualified real estate professional - based on the agent's track record of getting results for their clients. Written by an industry

insider, the book is divided into two sections: The first section is written for Sellers. It provides the questions to ask an agent that focus on their results as well as shedding light on possible conflicts of interest and what you should expect, as a Seller working with a skilled real estate professional who is representing your interests. Questions for Sellers How can you be sure you're hiring a skilled real estate professional? Does a relationship with an agent guarantee you anything? How can you determine whether the real estate agent you are interviewing has a track record of getting results for their clients? Does the agent understand current market conditions and how they can affect your ability to sell? The second section is written for Buyers. The focus is on hiring a qualified agent based on their track record of results, provides the essential questions to ask and the answers that matter most to Buyers. This section also illustrates the real value a skilled consumer-centric agent can provide for the Buyer in a real estate transaction. Questions for Buyers Are you getting pricing guidance from an agent with a solid pricing track record? How can you better insure that your agent is acting in your best interests? Does the agent understand current market conditions and how they can affect your ability to buy? A skilled agent can save you time and money - Results Matter - How smart people hire smart real estate agents can show you how to find the right agent that will get you the results you're looking for.

Advances in Cognitive Research, Artificial Intelligence and Neuroinformatics Boris M. Velichkovsky,Pavel M. Balaban,Vadim L. Ushakov,2021-04-17 This book reports on theoretical and experimental research answering key questions in neuroscience, philosophy of mind, and cognitive research. It gives a special emphasis on findings achieved within the territory of the former U.S.S.R, which has remained largely unknown to an international readership. The volume gathers authoritative studies on cognitive development, consciousness, attention and perception. It covers research on eye movements, language, speech and semantics, emotion, as well as brain functional states, and a variety of decision-making processes. It also highlights important advances in cognitive robotics and artificial intelligence, discussing brain-computer interfaces and other practically-relevant technologies. It includes studies on human subjects, in both healthy and disease conditions, and investigations on the molecular mechanisms of cognition in animal models. Chapters are based on invited lectures and peer-reviewed contributions to the 9th International Conference on Cognitive Sciences, Intercognsci–2020, held on October 10-16, 2020, in Moscow. The conference was organized by the Interregional Association of Cognitive Studies, with the participation of the Pavlov Society for Neurophysiology and Higher Nervous Activity, and supported by the Russian Academy of Sciences, the Russian Foundation for Basic Research and a number of

the north eastern European research institutions. All in all, this book provides cognitive scientists around the world with a timely snapshot of interdisciplinary research and cutting-edge models, and a major source of inspiration for future collaborations in the areas of artificial intelligence and cognitive neuroscience.

Building Intelligent Agents Gheorghe Tecuci,1998-06-23 Building Intelligent Agents is unique in its comprehensive coverage of the subject. The first part of the book presents an original theory for building intelligent agents and a methodology and tool that implement the theory. The second part of the book presents complex and detailed case studies of building different types of agents: an educational assessment agent, a statistical analysis assessment and support agent, an engineering design assistant, and a virtual military commander. Also featured in this book is Disciple, a toolkit for building interactive agents which function in much the same way as a human apprentice. Disciple-based agents can reason both with incomplete information, but also with information that is potentially incorrect. This approach, in which the agent learns its behavior from its teacher, integrates many machine learning and knowledge acquisition techniques, taking advantage of their complementary strengths to compensate for each others weakness. As a consequence, it significantly reduces (or even eliminates) the involvement of a knowledge engineer in the process of building an intelligent agent.

Ontology-Based Multi-Agent Systems Maja Hadzic,Elizabeth J. Chang,Pornpit Wongthongtham,2009-07-07 During the last two decades, the idea of Semantic Web has received a great deal of attention. An extensive body of knowledge has emerged to describe technologies that seek to help us create and use aspects of the Semantic Web.

Ontology and agent-based technologies are understood to be the two important technologies here. A large number of articles and a number of books exist to describe the use individually of the two technologies and the design of systems that use each of these technologies individually, but little focus has been given on how one can - sign systems that carryout integrated use of the two different technologies. In this book we describe ontology and agent-based systems individually, and highlight advantages of integration of the two different and complementary te- nologies. We also present a methodology that will guide us in the design of the - tegrated ontology-based multi-agent systems and illustrate this methodology on two use cases from the health and software engineering domain. This book is organized as follows: • Chapter I, Current issues and the need for ontologies and agents, describes existing problems associated with uncontrollable information overload and explains how ontologies and agent-based systems can help address these - sues. • Chapter II, Introduction to multi-agent systems, defines agents and their main characteristics and features including mobility, communications and collaboration between different agents. It also presents different types of agents on the basis of classifications done by different authors.

DigiMarketing Kent Wertime,Ian Fenwick,2011-12-19 We are all DigiMarketers now - or we should be. The authors have for the first time provided a lucid, hype-free, business-based and practical guide to the new age of marketing: it is a kind of digital Baedeker, which should be on every businessman's book-shelf. —Miles Young, Chairman, Ogilvy & Mather Asia Pacific The digital frontier is now the center of our universe. As Kent Wertime and Ian Fenwick show, marketers must seize this digital opportunity to accelerate their market growth. —John A. Quelch, Senior Associate Dean and Lincoln Filene Professor of Business Administration, Harvard Business School Too many advertisers are stuck in the primordial soup when it comes to their digital marketing strategy. However, they need to evolve fast if they are to survive in a multi-channel landscape. This timely book acts like an Origin of the Species, steering hesitant brand owners through the complexities of the digital ecosystem. An impressive blend of academic theory, professional insight and practical advice. —Paul Kemp-Robertson, Co-founder & Editorial Director, Contagious www.contagiousmagazine.com DigiMarketing: The Essential Guide to New Marketing &

Digital Media is a clear call for companies to evolve their marketing practice. This book is essential reading for anyone seeking a roadmap to the future of business. —Dipak C. Jain, Dean, Kellogg School of Management The rise of conversational media new forms of distribution - from blogs to mobile platforms - challenge traditional approaches to marketing, and require every business to have a transition plan. Kent Wertime and Ian Fenwick have written a book that is required reading for any marketers interested in successfully making that transition. —John Battelle, CEO and Founder, Federated Media Publishing and Author, The Search Kent Wertime and Ian Fenwick have written the definitive guide to marketing in the digital age. But Digimarketing does more than educate marketing professionals. It describes the new media landscape brilliantly, making it an essential read for anyone who hopes to understand the most important technological revolution of the past fifty years. I wore out three yellow highlighters before realizing that every sentence and every paragraph is worth committing to memory. —Norman Pearlstine, Former Editor-in-Chief, Time Inc. and Managing Editor, The Wall Street Journal, Senior Advisor, Telecommunications & Media, The Carlyle Group

  Intelligent Software Agents Walter Brenner,Rüdiger Zarnekow,Hartmut Wittig,2012-12-06 2 chapter contains examples of intelligent agents, arranged according to their appli cation areas. Chapter 7 closes with a prospective view of the future development of intelligent agents. Everyone concerned with the Internet and the new possibilities of information and communication technology knows that nowadays there is no area that is devel oping faster. The authors are aware of the dynamics of this research area and its effects when they describe such a fast developing area in a slow, traditional

me dium like a book. One thing is sure today: when the book appears on the market, new intelligent agents will already exist and some of the hypotheses made by this book will have been shown to be incorrect. Why, despite this, does it make sense to write a classical book on this subject? Is there an alternative? Experience shows that the majority of the people in business and public life who make decisions on the use of new technologies continue to prefer books and articles in periodicals rather than electronic sources such as the Internet. Or is there some other reason for the enormous success of Nicolas Negroponte's book Being Digital, which we thank for multimedia and many concepts of the digital and networked world, and even intelligent agents? Today, a book is still the only way to establish a new area.

5th International Conference on Digital Enterprise Technology Alain Bernard,2010 Digital Enterprise Technology (DET) is more than a concept. Companies arc facing new challenges in a context where the references are mostly numerical. Nowadays, digital methods and tools arc widely generalized. DET 2008 allowed excellent exchanges about the collection of systems and methods for the digital modelling and analysis of the global product development and realisation process, in the context of lifecycle management. This book of proceedings gives a short vices of the keynotes and proposes the text of the papers that have been presented during DET 2008. This gives a clear view of the actual state of the art and of the industrial needs. This book of proceedings is organized with respect to the topics that were addressed during the conference.
