Recently, smart soft materials that can respond to an external stimulus (such as an electric field, magnetic field, sound, light, temperature, pH, and so on) as well as functional soft materials that are electronically, magnetically, or thermally conductive have attracted considerable attention. They have application potentials in various fields. To some extent, they are the way to fulfill most of the black technology described in the world of science fiction. This book introduces several smart soft materials and functional soft materials, which are of interest to scholars in related fields.

Mania and Literary Style Clement Hawes,1996-01-26 This highly original study of the 'manic style' in enthusiastic writing of the seventeenth and eighteenth centuries identifies a literary tradition and line of influence running from the radical visionary and prophetic writing of the Ranters and their fellow enthusiasts to the work of Jonathan Swift and Christopher Smart. Clement Hawes offers a counterweight to recent work which has addressed the subject of literature and madness from the viewpoint of contemporary psychological medicine, putting forward instead a stylistic and rhetorical analysis. He argues that the writings of dissident 'enthusiastic' groups are based in social antagonisms; and his account of the dominant culture's ridicule of enthusiastic writing (an attitude which persists in twentieth-century literary history and criticism) provides a powerful and daring critique of pervasive assumptions about madness and sanity in literature.

Urban Re-industrialization Krzysztof Nawratek,2017-07-24 Urban re-industrialisation could be seen as a method of increasing business effectiveness in the context of

a politically stimulated 'green economy'; it could also be seen as a nostalgic mutation of a creative-class concept, focused on 3D printing, 'boutique manufacturing' and crafts. These two notions place urban re-industrialisation within the context of the current neoliberal economic regime and urban development based on property and land speculation. Could urban re-industrialisation be a more radical idea? Could urban re-industrialization be imagined as a progressive socio-political and economic project, aimed at creating an inclusive and democratic society based on cooperation and a symbiosis that goes way beyond the current model of a neoliberal city? In January 2012, against the backdrop of the 2008 financial crisis, Krzysztof Nawratek published a text in opposition to the fantasy of a 'cappuccino city,' arguing that the post-industrial city is a fiction, and that it should be replaced by 'Industrial City 2.0.' Industrial City 2.0 is an attempt to see a post-socialist and post-industrial city from another perspective, a kind of negative of the modernist industrial city. If, for logistical reasons and because of a concern for the health of residents, modernism tried to separate different functions from each other (mainly industry from residential areas), Industrial City 2.0 is based on the ideas of coexistence, proximity, and synergy. The essays collected here envision the possibilities (as well as the possible perils) of such a scheme.

SMART Methodology Peter Thompson,2004 The New Discipline in IT: Applications Support and Maintenance (ASM) Today's CIOs are charged with an ever-broadening range of responsibilities, chief among them aligning IT with business objectives, and using IT to move the business forward. New technologies and applications that provide businesses with efficiency improvements or competitive advantages are where CIOs' careers are made...or broken. Now consider the fact that up to 90% of enterprise IT spending, and the bulk of CIO attention, is paid not to strategic priorities or future developments, but to the support of existing systems. Only recently have IT leaders begun to appreciate this fact, and that Applications Support and Maintenance (ASM) requires its own skill sets, culture and best practices. Formerly the silent majority of IT spending, ASM today is the newest IT discipline. SMART Methodology: Best Practices in ASM SMART Methodology: The Only Authoritative Guide to Creating a Successful Applications Support and Maintenance Environment, details what amounts to the industry's first established best practices in supporting, maintaining and enhancing existing applications. Based on more than 25 years of research, development and implementation, SMART Methodology details practices including: The Continuous Lifecycle Methodology Application Taxonomy Benchmarks and Service Levels Support and Maintenance Tools Support and Maintenance Maturity Levels Governance and Change Control Reporting and Documentation Corporate Culture For more information about RIS, please go to www.risglobal.com Rave Reviews for SMART Methodology The industry has been in need of a book like SMART Methodology for years Finally a detailed, thorough and established set of best practices for ASM Clearly based on seasoned, focused experience in supporting mission-critical IT applications Thorough, well thought out, and the first book of its kind SMART is a leading edge practice and should soon be the industry standard.
