SmartCode & Manual ,2004 The SmartCode is the innovative model design and development code released by Duany Plater-Zyberk and Company (DPZ) in 2003, after two decades of research and internationally acclaimed built results. The SmartCode is the only unified transect-based design and development code available for all scales of planning, from the region to the community to the block and building. It keeps towns compact and rural lands open, while reforming the destructive sprawl-producing patterns of separated-use zoning.

Qualitative Analysis Using ATLAS.ti Nicholas H. Woolf,Christina Silver,2017-09-11 Software is cut-and-dried – every button you press has a predictable effect – but qualitative analysis is open-ended and unfolds in unpredictable ways. This contradiction is best resolved by separating analytic strategies – what you plan to do – from software tactics – how you plan to do it. Expert ATLAS.ti users have unconsciously learned to do this. The Five-Level QDA® method unpacks the process so that you can learn it consciously and efficiently. The first part of the book explains how the contradiction between analytic strategies and software tactics is reconciled by translating between them. The second part provides both an in-depth description of how ATLAS.ti works and comprehensive instruction in the five steps of translation. these steps are illustrated with examples from a variety of research projects. The third part contains real-world qualitative research projects from a variety of disciplines, methodologies, and kinds of qualitative analysis, all illustrated in ATLAS.ti using the Five-Level QDA method. The book is accompanied by three sets of videos demonstrations on the Companion Website. While this book uses screenshots from the current ATLAS.ti Version 8, it is still fully applicable to users of older versions. The book and accompanying videos illustrate the Windows version of ATLAS.ti. As there are some differences in screen and interface design between the Mac and Windows versions please watch the video 'The ATLAS.ti Mac Interface' in the Component Orientation series of videos (available September 2017) The Five-Level QDA method is based on the authors' combined 40 years of experience teaching ATLAS.ti and other software packages used as platforms for conducting qualitative analysis. After many years observing their students' challenges they developed the Five-Level QDA method to describe the process that long-time ATLAS.ti experts unconsciously adopt. The Five-Level QDA method is independent of software program or methodology, and the principles apply to any type of qualitative project. The SmartCode Solution to Sprawl Chad Emerson,2007 The SmartCode Solution to Sprawl, a practical guide to the implementation of the comprehensive zoning tool designed by a diverse group of land planners, designers, attorneys, developers and concerned citizens, explains how the SmartCode works and how to customize it for local use.

Form Based Codes Daniel G. Parolek, AIA,Karen Parolek,Paul C. Crawford, FAICP,2008-03-21 A comprehensive, illustrative guide to Form-Based Codes This volume describes in clear argument and significant detail the issues and techniques associated with the design and management of Form-Based Codes as an antidote to zoning and sprawl. Reading it and putting it to practice is an excellent point of departure for individuals and municipalities to safeguard and to grow their communities. - From the Foreword by noted architect and urbanist Stefanos Polyzoides Form-Based Codes are the latest evolutionary step in the practice of development and land-use regulation. A growing alternative to conventional zoning laws, Form-Based Codes go beyond land use to address not just the physical form of buildings but also surrounding streets, blocks, and public spaces in order to create, protect, and revitalize sustainable communities. Written by three recognized leaders in the field of New Urbanism, including an urban planner and an architect, this book is the first to address this subject comprehensively. After defining Form-Based Codes and explaining why they are a necessary alternative to conventional zoning regulations, the authors detail the various components of Form-Based Codes and then go step by step through the process of creating and implementing them. Finally, a series of case studies illustrates best practice applications of Form-Based Coding at various scales from county-wide to site specific, and various project types from city-wide development code replacement to the preservation or evolution of downtowns. This timely and accessible text features: * More than 200 clear illustrations of Form-Based Codes * Studies of real-world applications of Form-Based Coding by leading planners, urban designers, and architects Form-Based Codes is a must-read for today's urban designers, urban planners, architects, and anyone with a vested interest in utilizing the latest regulatory tool to help create compact, walkable, and sustainable communities.

21st Century Security and CPTED Randall I. Atlas, 2013-06-25 The concept of Crime Prevention Through Environmental Design (CPTED) has undergone dramatic changes over the last several decades since C. Ray Jeffery coined the term in the early 1970s, and Tim Crowe wrote the first CPTED applications book. The second edition of 21st Century Security and CPTED includes the latest theory, knowledge, and practice of CPTED as it relates to the current security threats facing the modern world: theft, violent crime, terrorism, gang activity, and school and workplace violence. This significantly expanded edition includes the latest coverage of proper lighting, building design—both the interior and exterior—physical security barriers, the usage of fencing, bollards, natural surveillance, landscaping, and landscape design. Such design concepts and security elements can be applied to address a wide variety of threats including crime prevention, blast mitigation, and CBRNE threat protection. Authored by one of the U.S.'s renowned security experts—and a premiere architect and criminologist—the book is the most comprehensive examination of CPTED and CPTED principles available. This edition includes a complete update of all chapters in addition to five new chapters, over 700 figure illustrations and photos, numerous tables and checklists, and a 20-page color plate section. This latest edition: Features five new chapters including green and sustainable buildings, infrastructure protection, and premises liability Presents step-by-step guidelines and real-world applications of CPTED concepts, principles and processes—from risk assessment to construction and post-occupancy evaluation Outlines national building security codes and standards Examines architectural surety from the perspective of risk analysis and premises liability Demonstrates CPTED implementation in high-security environments, such as hospitals, parks, ATMs, schools, and public and private sector buildings A practical resource for architects, urban planners and designers, security managers, law enforcement, CPTED practitioners, building and property managers, homeland security professionals, and students, 21st Century Security and CPTED, Second Edition continues to serve as the most complete and up-to-date reference available on next-generation CPTED practices today.

An Extensible Component & Connector Architecture Description Infrastructure for Multi-Platform Modeling Andreas Wortmann, 2016-11-08 Software engineering for complex systems requires abstraction, multi-domain expertise, separation of concerns, and reuse. Domain experts rarely are software engineers and should formulate solutions using their domain's vocabulary instead of general purpose programming languages (GPLs). Successful integration of domain-specific languages (DSLs) into a software system requires a separation of concerns between domain issues and integration issues while retaining a loose enough coupling to support DSL reuse in different contexts. Component-based software engineering (CBSE) increases reuse and separation of concerns by encapsulating functionalities in components. Components are GPL artifacts, which raises accidental complexities. Model-driven engineering (MDE) abstracts from GPLs by lifting models to primary development artifacts. Models can be abstract and better comprehensible by using domain vocabulary instead of a GPL. They can be platform-independent and translated into GPLs for different target platforms. Component & connector (C&C) architecture description languages (ADLs) combine CBSE and MDE to compose of architectures from component models. We present concepts for engineering software systems with exchangeable component behavior languages. The concepts are realized in a software architecture modeling infrastructure that comprises modeling languages to develop applications based on C&C software architectures with exchangeable component behavior DSLs. It supports transformations from platform-independent to platform-specific software architectures and compositional code generation. With this, it enables domain experts to (re-)use the most appropriate component behavior DSL and facilitates composition of domain solutions through encapsulation in components.
