Production Networks in Southeast Asia Lili Yan Ing, Fukunari Kimura, 2017-02-03 This book answers the recently topical questions of how China's processed trade affects the trade of Southeast Asia. What is Southeast Asia's role in Factory Asia, the region's complex of cross-border supply chains? What is Southeast Asia's involvement in building or joining production networks in the region? And, most important, how can Southeast Asia increase the value added of its products and improve its competitiveness? This book provides rigorous analysis of how trade policy affects value added, highly disaggregated at the firm and product level, of the six Southeast Asian countries - Indonesia, Malaysia, the Philippines, Singapore and Viet Nam - and combines this with thorough

examinations of their trade, industrial and labour policies.

The book addresses a wide range of problems that all levels of SMS administrators have reported to our authors in the course of their real-world jobs. Some are simple, beginning implementation solutions, while others address high-end automation techniques. The recipes in this book were not selected whimsically, nor on the basis of what the authors found cool or interesting, but rather on the frequency and importance of complaints experienced by the authors in practical business environments.

Economic and Environmental Impact of Free Trade in East and South East Asia Kakali Mukhopadhyay, Paul J. Thomassin, 2009-12-18 In recent years, the East and South East Asian region has witnessed a rapid expansion of regional economic cooperation through bilateral and plurilateral free trade agreements. The current book attempts to comprehensively analyze the economic and environmental impacts of regional economic integration in East and South East Asia to the year 2020. This region has some of the fastest growing economies of the world. A global economic model was used to undertake the analysis. A rare feature of the book is the detailed environmental implications of the Regional Trade Agreements focusing on air, water, and waste pollution. Economic integration among the East and South East Asian region has been an important agenda item for the academic and policy communities in recent years. The study provides insight into pursuing a concrete multilateral trade liberalization policy (combining ASEAN and other countries in East Asia) and throws more light on the on-going trade and environment debate. This book will be a good addition to the field of trade and the environment. The academic community - primarily researchers and policy makers, and world bodies, such as the WTO, ADB and the World Bank, will benefit from the book.

Introduction to Development Engineering Temina Madon, Ashok J. Gadgil, Richard Anderson, Lorenzo Casaburi, Kenneth Lee, Arman Rezaee, 2022-09-08 This open access textbook introduces the emerging field of Development Engineering and its constituent theories, methods, and applications. It is both a teaching text for students and a resource for researchers and practitioners engaged in the design and scaling of technologies for low-resource communities. The scope is broad, ranging from the development of mobile applications for low-literacy users to hardware and software solutions for providing electricity and water in remote settings. It is also highly interdisciplinary, drawing on methods and theory from the social sciences as well as engineering and the natural sciences. The opening section reviews the history of "technology-for-development" research, and presents a framework that formalizes this body of work and begins its transformation into an academic discipline. It identifies common challenges in development and explains the book's iterative approach of "innovation, implementation, evaluation, adaptation." Each of the next six thematic sections focuses on a different sector: energy and environment; market performance; education and labor; water, sanitation and health; digital governance; and connectivity. These thematic sections contain case studies from landmark research that directly integrates engineering innovation with technically rigorous methods from the social sciences. Each case study describes the design, evaluation, and/or scaling of a technology in the field and follows a single form, with common elements and discussion questions, to create continuity and pedagogical consistency. Together, they highlight successful solutions to development challenges, while also analyzing the rarely discussed failures. The book concludes by reiterating the core principles of development engineering illustrated in the case studies, highlighting common challenges that engineers and scientists will face in designing technology interventions that sustainably accelerate economic development. Development Engineering provides, for the first time, a coherent intellectual framework for attacking the challenges of poverty and global climate change through the design of better technologies. It offers the rigorous discipline needed to channel the energy of a new generation of scientists and engineers toward advancing social justice and improved living conditions in low-resource communities around the world.
