z/VM and Linux on IBM System z: The Virtualization Cookbook for SLES9 Michael MacIsaac,Jin Xiong,IBM Redbooks,2006-04-18 This IBM IBM Redbooks publication describes how to

setup your own Linux virtual servers on IBM zSeries and System z9 under z/VM . It adopts a cookbook format that provides a clearly documented set of procedures for installing and configuring z/VM in an LPAR and then installing and customizing Linux. You need a zSeries logical partition (LPAR) with associated resources, z/VM 5.2 media, and a Linux distribution. This book is based on SUSE Linux Enterprise Server 9 (SLES9) for zSeries and we address both 31-bit and 64-bit distributions. In addition, there are a few associated REXX EXECs and Linux scripts to help speed up the process. These tools are not IBM products nor formally supported. However, they are informally supported. They are available on the Web. In this book, we assume that you have a general familiarity with zSeries technology and terminology. We do not assume an in-depth understanding of z/VM and Linux. This book is written for those who want to get a quick start with z/VM and Linux on the mainframe.

Software Security - Theories and Systems Kokichi Futatsugi, Fumio Mizoguchi, Naoki Yonezaki, 2004-11-02 Following the success of the International Symposium on Software Security 2002 (ISSS 2002), held in Keio University, Tokyo, November, 2002, ISSS 2003 was held in the Tokyo Institute of Technology, Tokyo, on November 4-6, 2003. This volume is the collection of the papers that were presented at ISSS 2003. The proceedings of ISSS 2002 was published as LNCS 2609. Although the security and reliability of software systems for networked computer systems are major concerns of current society, the technology for software security still needs to be developed in many directions. Similar to ISSS 2002, ISSS 2003 aimed to provide a forum for research discussions and exchanges among world-leading scientists in the fields of both

theoretical and systems aspects of security in software construction. The program of ISSS 2003 was a combination of invited talks and selected research contributions. It included the most recent visions and researches of the 9 invited speakers, as well as 11 contributions of researches funded by the MEXT grant-in-aid for scientific research on the priority area "Implementation Scheme for Secure Computing" (AnZenKaken). We collected the original contributions after their presentation at the symposium and began a review procedure that resulted in the selection of the papers in this volume. They appear here in final form. ISSS 2003 required a lot of work that was heavily dependent on members of the program committee, and staffs and graduate students who participated in AnZenKaken. We sincerely thank them for their efforts and time.
