SNIPPETS (bits and Pieces of Love and Life) by CAROLE Carole Christie Moore Adams, 2004-09 SNIPPETS (bits and pieces of love and life) by CAROLE, written in short chapters for picking up, reading a bit, and setting down, is one you will enjoy so much that you will be reluctant to set it down. The inspirational story of the love and life of Carole and John, her husband, who both view his Parkinson's Disease as just another facet of daily living, is told in vignettes of themselves and of their families, friends, homes, and animals. The witty, poignant sketches will cause you to laugh, cry, empathize, wonder, think, or feel the Snippet refers to you or someone you know. Her writing style scrambles together those of Erma Bombeck, Andy Rooney, and James Joyce. The book describes the couple's real life experience as their numerous gray hairs, wrinkles and bruises from stress, heartaches, headaches, accidents, diseases, and their working, dancing, playing, and laughing together will attest. Some of Carole's life before meeting John is revealed as she chats about a Perfect Family, Afraid, Running Away, A Single Stitch, Skates, Periwinkle Soup, Psychic, Kidnapping, Long Hair, Hurricanes, Bassoons, Blue Lips, and other topics. People of all ages will find these revelations by Carole Christie Moore Adams fascinating!

Search-based Applications Gregory Grefenstette, Laura Wilber, 2011 We are poised at a major turning point in the history of information management via computers. Recent evolutions in computing, communications, and commerce are fundamentally reshaping the ways in which we humans interact with information, and generating enormous volumes of electronic data along the way. As a result of these forces, what will data management technologies, and their supporting software and system architectures, look like in ten years? It is difficult to say, but we can see the future taking shape now in a new

generation of information access platforms that combine strategies and structures of two familiar -- and previously quite distinct -- technologies, search engines and databases, and in a new model for software applications, the Search-Based Application (SBA), which offers a pragmatic way to solve both well-known and emerging information management challenges as of now. Search engines are the world's most familiar and widely deployed information access tool, used by hundreds of millions of people every day to locate information on the Web, but few are aware they can now also be used to provide precise, multidimensional information access and analysis that is hard to distinguish from current database applications, yet endowed with the usability and massive scalability of Web search. In this book, we hope to introduce Search Based Applications to a wider audience, using real case studies to show how this flexible technology can be used to intelligently aggregate large volumes of unstructured data (like Web pages) and structured data (like database content), and to make that data available in a highly contextual, quasi real-time manner to a wide base of users for a varied range of purposes. We also hope to shed light on the general convergences underway in search and database disciplines, convergences that make SBAs possible, and which serve as harbingers of information management paradigms and technologies to come. Table of Contents: Search Based Applications / Evolving Business Information Access Needs / Origins and Histories / Data Models and Storage / Data Collection/Population / Data Processing / Data Retrieval / Data Security, Usability, Performance, Cost / Summary Evolutions and Convergences / SBA Platforms / SBA Uses and Preconditions / Anatomy of a Search Based Application / Case Study: GEFCO / Case Study: Urbanizer / Case Study: National Postal Agency / Future Directions

Patents and Technological Progress in a Globalized World Wolrad Prinz zu Waldeck und Pyrmont, Martin J. Adelman, Robert Brauneis, Josef Drexl, Ralph Nack, 2008-11-20 In the last two decades, accelerating technological progress, increasing economic globalization and the proliferation of international agreements have created new challenges for intellectual property law. In this collection of articles in honor of Professor Joseph Straus, more than 60 scholars and practitioners from the Americas, Asia and Europe provide legal, economic and policy perspectives on these challenges, with a particular focus on the challenges facing the modern patent system. Among the many topics addressed are the rapid development of specific technical fields such as biotechnology, the relationship of exclusive rights and competition, and the application of territorially limited IP laws in cross-border scenarios.

Microsoft .NET - Architecting Applications for the Enterprise Dino Esposito, Andrea Saltarello, 2014-08-28 A software architect's digest of core practices, pragmatically applied Designing effective architecture is your best strategy for managing project complexity-and improving your results. But the principles and practices of software architecting-what the authors call the "science of hard decisions"-have been evolving for cloud, mobile, and other shifts. Now fully revised and updated, this book shares the knowledge and real-world perspectives that enable you to design for success-and deliver more successful solutions. In this fully updated Second Edition, you will: Learn how only a deep understanding of domain can lead to appropriate architecture Examine domain-driven design in both theory and implementation Shift your approach to code first, model later-including multilayer architecture Capture the benefits of prioritizing software maintainability See how readability, testability, and extensibility lead to code quality Take a user experience (UX) first approach, rather than designing for data Review patterns for organizing business logic Use event sourcing and CQRS together to model complex business domains more effectively Delve inside the persistence layer, including patterns and implementation.

Compiler Construction Björn Franke, 2015-03-31 This book constitutes the proceedings of the 24th International Conference on Compiler Construction, CC 2015, held as part of the European Joint Conferences on Theory and Practice

Computational Actuarial Science with R Arthur Charpentier, 2014-08-26 A Hands-On Approach to Understanding and Using Actuarial Models Computational Actuarial Science with R provides an introduction to the computational aspects of actuarial science. Using simple R code, the book helps you understand the algorithms involved in actuarial computations. It also covers more advanced topics, such as parallel computing and C/C++ embedded codes. After an introduction to the R language, the book is divided into four parts. The first one addresses methodology and statistical modeling issues. The second part discusses the computational facets of life insurance, including life contingencies calculations and prospective life tables. Focusing on finance from an actuarial perspective, the next part presents techniques for modeling stock prices, nonlinear time series, yield curves, interest rates, and portfolio optimization. The last part explains how to use R to deal with computational issues of nonlife insurance. Taking a do-it-yourself approach to understanding algorithms, this book demystifies the computational aspects of actuarial science. It shows that even complex computations can usually be done without too much trouble. Datasets used in the text are available in an R package (CASdatasets).

Listening in Eric Prieto, 2002-01-01 What can music teach a novelist, autobiographer, or playwright about the art of telling stories? The musical play of forms and sounds seems initially to have little to do with the representational function of the traditional narrative genres. Yet throughout the modernist era, music has been invoked as a model for narrative in its specifically mimetic dimension. Although modernist writers may conceive of musical communication in widely divergent ways, they have tended to agree on one crucial point: that music can help transform narrative into a medium better adapted to the representation of consciousness. Eric Prieto studies the twentieth-century evolution of this use of music, with particular emphasis on the postwar Parisian avant-garde. For such writers as Samuel Beckett, Michel Leiris, and Robert Pinget, music provides a number of guiding metaphors for the inwardly directed mode of mimesis that Prieto calls listening in, where the object of representation is not the outside world but the subtly modulating relations between consciousness and world. This kind of semiotic boundary crossing between music and literature is inherently metaphorical, but, as Prieto's analyses of Beckett, Leiris, and Pinget show, these interart analogies provide valuable clues for bringing to light the unspoken assumptions, obscurely understood principles, and extra-literary aspirations that gave such urgency to the modernist quest to better represent the mind in action.

Mountain Climber Bill Katra, 2020-02-11 Nearing his sixth decade as a dedicated climber, William Bill Katra describes himself as not a great climber, but a persistent one. In his memoir, the author details his climbs in vivid detail, describing some of the world's most popular routes while emphasizing that scenic beauty is as important to a hike as technical difficulty. From his early partner-belayed adventures to his more recent unassisted solo scamper-climbs, Bill's techniques have evolved, but his love for the experience remains steadfast. Within recent years, Bill has again summited a few climbs from his younger days, often reflecting on where senior climbers fit in the sport's changing social--and environmental--landscape. This memoir is a relatable and nostalgic account of a life well-spent in nature, as the author muses on his long-past adventures enriched and nurtured by the wisdom of the present.
