**The Aspen Institute Guide to Socially Responsible MBA Programs: 2008-2009** The Aspen Institute, 2008-06-23 The Aspen Institute, a premier non-profit, research organization for corporate social responsibility, offers the first comprehensive guide to the world's leading global MBA programs in CSR—an indispensable guide for prospective students, universities, hiring companies, and libraries. This guide provides an overview of how global MBA programs bring social impact management into their curricular and extracurricular programs. Social impact management, which includes environmental, ethical, and corporate governance issues, is the field of inquiry at the intersection of business needs and wider societal concerns that reflects their complex interdependency. Without an understanding of this interdependency, neither business nor the society in which it operates can thrive. Each year business schools from around the world strive to differentiate themselves and attract the best and the brightest future business leaders, while prospective MBAs are looking for a program that will provide effective management skills to succeed in the changing face of business. The bottom line is no longer exclusively dedicated to financial returns. Rather, business leaders must also consider the environmental and social impacts of their decisions

in order to compete in today's marketplace. The MBA schools that participate in the Aspen Institute's survey, and are therefore highlighted in the Aspen Institute Guide for Socially Responsible MBA Programs: 2008-2009, are leaders in integrating these issues into their MBA curricula.

**Social Complexity and Complex Systems in Archaeology** Dries Daems, 2021-02-22 Social Complexity and Complex Systems in Archaeology turns to complex systems thinking in search of a suitable framework to explore social complexity in Archaeology. Social complexity in archaeology is commonly related to properties of complex societies such as states, as opposed to so-called simple societies such as tribes or chiefdoms. These conceptualisations of complexity are ultimately rooted in Eurocentric perspectives with problematic implications for the field of archaeology. This book provides an in-depth conceptualisation of social complexity as the core concept in archaeological and interdisciplinary studies of the past, integrating approaches from complex systems thinking, archaeological theory, social practice theory, and sustainability and resilience science. The book covers a long-term perspective of social change and stability, tracing the full cycle of complexity trajectories, from emergence and development to collapse, regeneration and transformation of communities and societies. It offers a broad vision on social complexity as a core concept for the present and future development of archaeology. This book is intended to be a valuable resource for students and scholars in the field of archaeology and related disciplines such as history, anthropology, sociology, as well as the natural sciences studying human-environment interactions in the past.
