My Icon Library Willemien Brand, 2021-04 My Icon Library is an essential collection of impactful images that will empower you to embark on your own journey of visual thinking and storytelling. The collection consist of the most common, interesting, weird and wonderful concepts created during the author's visual thinking workshops. The concepts are grouped into categories that regularly crop up at the workshops: finance, technology, innovation, agile and sales, as well as broader themes such as team dynamics, way-of-working, politics and the world we live in. This is not a definitive list: every story is different and has its own blend of icons and visuals. My Icon Library is a source of inspiration and a go-to reference for whenever you need a visual that's a tad too complicated for your imagination or a Google Images search. It also works as a great companion to author's other bestselling books: Visual Thinking and Visual Doing.

Preparing for Life in a Digital World Julian Fraillon, John Ainley, Wolfram Schulz, Tim

Friedman, Daniel Duckworth, 2020-02-13 This Open Access book summarizes the key findings from the second cycle of IEA's International Computer and Information Literacy Study (ICILS), conducted in 2018. ICILS seeks to establish how well schools around the globe are responding to the need to provide young people with the necessary digital participatory competencies. Effective use of information and communication technologies (ICT) is an imperative for successful participation in an

increasingly digital world. ICILS 2018 explores international differences in students' computer and information literacy (CIL), namely their ability to use computers to investigate, create, and communicate at home, at school, in the workplace, and in the community. Participating countries also had an option to administer an assessment of students' computational thinking (CT), focused on their ability to recognize aspects of real-world problems appropriate for computational formulation, and to evaluate and develop algorithmic solutions to those problems, so that the solutions could be operationalized with a computer. The data collected by ICILS 2018 show how digital competencies can be assessed using instruments representing authentic contexts for ICT use, and how students' CIL and CT skills relate to school learning experiences, out-of-school contexts, and student characteristics. Those data also show how learning technologies are used in classrooms around the world. Background questionnaires asked students about their use of ICT, and collected information from teachers, schools, and national education systems about the resourcing and teaching of CIL (and CT) within their countries. The results of ICILS 2018 will enable policymakers and education systems to develop a better understanding of the contexts and outcomes of CIL (and CT) education programs.

Software Technologies for Embedded and Ubiquitous Systems Tony Givargis,Stefano

Russo,2008-09-25 Embedded and ubiquitous computing systems have considerably increased their scope of application over the past few years, and they now also include mission- and business-critical scenarios. The advances call for a variety of compelling issues, including dependability, real-time, quality-of-service, autonomy, resource constraints, seamless interaction, middleware support, modeling, verification, validation, etc. The International Workshop on Software Technologies for Future Embedded and Ubiquitous Systems (SEUS) brings together experts in the field of embedded and ubiquitous computing systems with the aim of exchanging ideas and advancing the state of the art about the above-mentioned issues. I was honored to chair the sixth edition of the workshop, which continued the tradition of past editions with high-quality research results. I was particularly pleased to host the workshop in the wonderful scenario of Capri, with its stunning views and traditions. The workshop started in 2003 as an IEEE event, and then in 2007 it became a flagship event of the IFIP Working Group 10.2 on embedded systems. The last few editions, held in Hakodate (Japan), Vienna (Austria), Seattle (USA), Gyeongju (Korea), and Santorini (Greece), were co-located with the IEEE International Symposium on Object/Component/Service-Oriented Real-Time Distributed Computing (ISORC). This year, SEUS was held as a stand-alone event for the first time, and, despite the additional organizational difficulties, it resulted in a high-quality event, with papers from four continents

(from USA, Europe, East Asia and Australia), (co-) authored and presented from senior scientists coming from academia or leading industrial research centers.

After the Software Wars Keith Curtis,2009 Computers are an advancement whose importance is comparable to the invention of the wheel or movable type. While computers and the Internet have already changed many aspects of our lives, we still live in the dark ages of computing because proprietary software is still the dominant model. One might say that the richest alchemist who ever lived is my former boss, Bill Gates. (Oracle founder Larry Ellison, and Google co-founders Sergey Brin and Larry Page are close behind.) Human knowledge increasingly exists in digital form, so building new and better models requires the software to be improved. People can only share ideas when they also share the software to display and modify them. It is the expanded use of free software that will allow a greater ability for people to work together and increase the pace of progress. This book will demonstrate that a system where anyone can edit, share, and review the body of work will lead not

just to something that works, but eventually to the best that the world can achieve! With better cooperation among our scientists, robot-driven cars is just one of the many inventions that will arrive -- pervasive robotics, artificial intelligence, and much faster progress in biology, all of which rely heavily on software. - Publisher.
