**Anticancer Genes** Stefan Grimm,2014-07-08 This book discusses the emergence of a new class of genes with a specific anticancer activity. These genes, recently defined as “Anticancer Genes”, are reviewed in individual chapters on their mode of action, the specific cell death signals they induce, and the status of attempts to translate them into clinical application. Anticancer Genes provides an overview of this nascent field, its genesis, current state, and prospect. It discusses how Anticancer Genes might lead to the identification of a repertoire of signaling pathways directed against cellular alterations that are specific for tumor cells. With contributions from experts worldwide, Anticancer Genes is an essential guide to this dynamic topic for researchers and students in cancer research, molecular medicine, pharmacology and toxicology and genetics as well as clinicians and clinical researchers interested in the therapeutic potential of this exciting new field.

Interventional Procedures in Hepatobiliary Diseases, An Issue of Clinics in Liver Disease, Andres Cardenas,2015-06-03 The field of hepatobiliary diseases has advanced enormously in the past 3 decades. The incorporation of new diagnostic and therapeutic interventions in clinical hepatology as well as liver transplantation has exponentially grown and specialty fields have emerged within the liver disease arena. Interventional procedures play a critical role in the management of patients with hepatobiliary diseases as they offer diagnostic and definite treatment options for an array of conditions. Interventions include those that directly measure portal pressure, perform transjugular liver biopsy and place transjugular intrahepatic portosystemic shunts as therapy for complications of portal hypertension. Other commonly performed intervention is digestive and hepatobiliary endoscopy which offers not only diagnostic but also therapeutic choices in various areas such as portal hypertension and hepatobiliary disease. Endoscopy plays a fundamental role in the management of patients with almost all types of liver disease. Additionally, both the fields of hepatology and endoscopy have become very specialized and thus a thorough knowledge of the indications, findings, therapeutic possibilities and complications that arise from endoscopic interventions is a must for the practicing clinician. The rising incidence of liver cancer has also placed radiofrequency ablation and chemoembolization of liver lesions at the forefront of interventional therapies for hepatocellular carcinoma. Finally the management of acute liver failure has certainly evolved with new therapeutic options such as liver assist devices that can help manage these patients in the intensive care unit. This issue of Clinics in Liver Disease devoted to Interventional Hepatology is a timely and unique one. The Guest Editors have assembled an outstanding group of experts in several fields that can provide practitioners with state of the art and evidence based articles that help manage patients with

hepatobiliary disease.

**Consultations in Liver Disease, An Issue of Clinics in Liver Disease**, Steven L. Flamm, 2014-12-24 Dr. Flamm has invited a group of distinguished hepatologists to provide insight into the assessment of a variety of scenarios where clinical judgment based on experience and published literature is an invaluable addition to the care of individual patients. Articles included in the issue address the following topics: Evaluation and Management of Portal Vein Thrombosis, Liver Disease in the HIV patient, Hepatocellular Carcinoma, Evaluation of Renal Insufficiency in the Cirrhotic Patient, Contemporary Management of Autoimmune Hepatitis, Diagnosis and Treatment of Overlap Syndromes, Ins and Outs of Liver Imaging for the Gastroenterologist, Contemporary Assessment of Hepatic Fibrosis, A Primer on Liver Transplantation Immunosuppressive Agents for the Gastroenterologist, Evaluation of Jaundice in the Hospitalized Patient, Liver Disease in the Adolescent, Evaluation and Management of Hemochromatosis and How and When to Administer Hepatitis A and B Virus Vaccinations. These are all common contemporary reasons for consultations for Gastroenterologists and Hepatologists and this issue will address the issues in a pragmatic way.

*Mutant p53 and MDM2 in Cancer* Swati Palit Deb, Sumitra Deb, 2014-09-08 This book provides the readers with an overview of research on p53, which has been shown to play a role in numerous crucial biological pathways in normal and cancer cells. Leading scientist in the field, who have all made direct contributions to the understanding of the molecular events underpinning p53 function, have been invited to contribute the various chapters, which discuss the current knowledge of the signaling cascades that are activated by mutations in p53 and overexpression of MDM2, frequently found in human cancer and are major causes of oncogenesis. This book features chapters on the molecular basis of oncogenesis induced by gain of function mutation of p53, signaling pathways induced by MDM2 overexpression, control of mutant or wild-type p53 function by MDM2 and MDMX, p53 mutation in hereditary cancer and structural aspects that activate mutant p53 which can be targeted by drug therapy. This book should be useful for scientists at all levels.

*Neurobiology of Epilepsy and Aging* R. Eugene Ramsay, 2007-04-16 This volume in the International Review of Neurobiology series addresses the epidemiology, pathophysiology, and treatment of epilepsy in elderly patients.

Demographically, the elderly comprise both the fastest-growing segment of the U.S. population and the adult age group with the highest incidence of epilepsy, yet there are relatively few publications devoted to this clinical subgroup. The intersection of these two complex processes—epilepsy and advancing age—will have an increasing impact on medical and community care. The etiology, prognosis, and differential diagnosis of epilepsy can all be affected by the normal aging process and by the frequent comorbidities encountered in an elderly population. Chapters in this book review the effects of aging on brain function and on drug metabolism and interactions, covering the gamut of research from animal models of aging and epilepsy to clinical trials and outcomes. Topics also include the dangers of misdiagnosing status epilepticus, the special issues encountered in recruiting and retaining elderly clinical trial participants, and the use of antiepileptic drugs in the elderly. In both the clinic and the research laboratory, a better understanding of how epilepsy may differ between younger and older patients will be valuable in determining the best possible care for geriatric patients with epilepsy.

**Pharmacological Aspects of Drug Dependence** Charles R. Schuster, Michael J. Kuhar, 2012-12-06 Now, in one volume, the latest research from the areas of molecular biology, neurochemistry and behavior analysis of drug abuse and dependence, with, wherever possible, an integration of the data from these various levels of analysis. The ensuing reports point to the complexity of the phenomenon of abuse and dependence and clearly demonstrate that it is determined by a variety of variables from molecular biology and genetics through behavioral history. This complexity is shown, however, to be responsive to rigorous scientific analysis and our success to date gives rise to hope that this distressing public health problem can ultimately be brought under control. Each of the chapters is written by a leading researcher in the field.
