**The Planets** DK,2014-09-01 See the Solar System like never before The Planets is an awe-inspiring and informative journey through the Solar System, with all-new 3D globes and models built using the latest data gathered by NASA and the European Space Agency that can be viewed from any angle and layer by layer. You can even move in for a closer look with 3D terrain models that take you on a trip to the surfaces of the rocky planets. As well as covering the Sun, the planets, hundreds of moons and thousands of asteroids and comets, The Planets includes all the major Solar System missions, right up to the latest Mars rovers. Timelines explore our relationship with each planet and infographics present fascinating Solar System facts and planet facts. The Planets is ideal for anyone interested in space exploration and all armchair astronauts or astronomers.

**The Solar System** Robin Birch,2003-10-01 Discusses the history, movement, atmosphere, moons, and exploration of Mars.

**Cool Stuff 2.0** Chris Woodford,Jon Woodcock,2007-09-17 Cool Stuff 2.0: And How it Works shows and explains, in a brilliantly visual and easy-to-understand way, exactly how the technology that shapes our world works. Find out when and how things were invented-from mobile phones and games consoles to smart cards and space planes. Cool Stuff 2.0: And How it Works will take you on an eye-opening journey from the engine of a hydrogen-fuelled car, into the virtual world of Second Life, and up the earthquake-proofed structure of the world's tallest office building. Cool Stuff 2.0: And How it Works will help you learn about the science behind every machine and gadget.

**The NASA Kepler Mission** Steve B. Howell,2020-09-15 This book covers the numerous, paradigm changing scientific discoveries in

exoplanets and other areas of astrophysics made possible by the NASA Kepler and K2 Missions. It is suitable for the interested layperson, pupils of science and space missions, and advanced science students and researchers.

In the Shadow of Deimos Jane Killick, 2021-08-03 Mars is the new frontier for humanity, as we launch an epic saga of inspiring planetary exploration set in the award-winning Terraforming Mars boardgame Mars, 2316. The recently created Terraforming Committee arbitrates the dramatic development of Mars by powerful rival corporations. When a rogue asteroid crashes into a research center and kills its lone technician, the fragile balance between corporations is shattered. The World Government's investigation into the accident reveals a multitude of motives, while a corporation insider stumbles on a dark conspiracy. Two Martians with very different agendas must navigate a trail of destruction and treachery to uncover the truth and expose those responsible, before Mars falls to Earth's corruption. As lines blur between progress and humanity, Mars itself remains the biggest

adversary of all.

*Mars Exploration* Giuseppe Pezzella, Antonio Viviani, 2020-09-09

More than 50 years after the Mariner 4 flyby on 15 July 1965, Mars still represents the next frontier of space explorations. Of particular focus nowadays is crewed missions to the red planet. Over three sections, this book explores missions to Mars, in situ operations, and human-rated missions. Chapters address elements of design and possible psychological effects related to human-rated missions. The information contained herein will allow for the development of safe and efficient exploration missions to Mars.

One Million Things: Space Carole Stott, 2010-06-21 A photographic feast serves up imagery and information about all things cosmic: from planets, moons, and comets, to black holes, nebulae, distant solar systems, and more. Following on the incredible success of the One Million Things series, this spectacular book features dynamic photographs that beautifully showcase the stars, moons, asteroids, spacecraft, satellites, and brand-new discoveries that make up our universe. There are millions of things to learn about space!

**Sizing Up the Universe** J. Richard Gott, Robert J. Vanderbei, 2011

Using space photographs and scaled maps, demonstrates the actual size of objects in the cosmos, from Buzz Aldrin's historic footprint on the Moon to the entire visible universe, with a gatefold of the Gott-Juric Map of the Universe.

*Welcome to the Universe in 3D* Neil deGrasse Tyson, Michael A. Strauss, J. Richard Gott, Robert J. Vanderbei, 2022-04-19 Presenting a rich array of stereoscopic color images, which can be viewed in 3D using a special stereo viewer that folds easily out of the cover of the

book, this book reveals your cosmic environment as you have never seen it before. Journey into the vast depths of the observable universe by visualising the most spectacular images in astronomy in stereoscopic 3D. *Welcome to the Universe in 3D* takes you on a grand tour of the observable universe, guiding you through the most spectacular sights in the cosmos in a breathtaking 3D. Astronomy is the story of how humankind's perception of the two-dimensional dome of the sky evolved into a far deeper comprehension of an expanding three-dimensional cosmos. This book invites you to take part in this story by exploring the universe in depth, as revealed by cutting-edge astronomical research and observations. You will journey from the Moon through the solar system, out to exoplanets, distant nebulae, and galaxy clusters, until you finally reach the cosmic microwave background radiation (or CMB), the most distant light we can observe. The distances to these celestial wonders range from 1.3 light-seconds to 13.8 billion light-years. Along the way, the authors explain the fascinating features of what you are seeing, including how the 3D images were made using the same technique that early astronomers devised to measure distances to objects in space. The dramatic 3D images in this one-of-a-kind book will astonish you, extending your vision out to the farthest reaches of the universe. You will never look up into the night sky the same way again.

*The Solar System and its Dwarf Planet*, 2018-08-28

**Discovery of Our Galaxy** Charles A. Whitney, 2012-06-06 This is a book about the mystery and the passion, the imagination, religion, and poetry, the philosophy, the intellectual flights—and, above all, the people—that have created the science of astronomy, from Thales of Miletus predicting eclipses in the sixth century B.C. to today's scientists probing the cosmic significance of the mysterious “black

holes” discovered in 1970. With authority and charm, the distinguished Harvard astronomer Charles A. Whitney here re-creates the lives and temperaments of the great astronomers and retraces the ingenious arguments, the feats of observation and deduction, and the leaps of intuition by which they have gradually unveiled a picture of the universe and have brought us to an understanding of our own planet’s place in it. Among them: KEPLER, searching the solar system for visible evidence of the transcendent order he believed in GALILEO, constructing the first telescope and proposing the concept of universal gravitation NEWTON, paragon of logic, paradoxically driven by an unshakable belief in himself as God’s appointed prophet to create a world of mathematical certainty and thus expose the wonder of his Father in Heaven WILLIAM HERSCHEL, the nineteenth-century German who may well be considered the father of modern astronomy, first man to chart the nebulae EDWIN HUBBLE, in the present century, discovering and exploring galaxies beyond our own Finally, Professor Whitney makes clear for the layman the fascinating problems astronomers wrestle with today: the mysterious nature of quasars, strange cosmic bodies discovered in 1963; the unknown forces behind cataclysmic explosions recently glimpsed in other galaxies; the elusive nature of “interstellar dust”; the eternal question of how it all began.

*My First Book of Planets* Bruce Betts, 2021-10-19 Blast off on an exploration of our solar system—a fun space book for kids 3 to 5 Get even the smallest astronomer excited for the big universe of space, from the bright and burning sun to our own blue Earth to ice-capped Pluto and every planet in between. With this book, kids will explore the entire solar system through incredible photos and fascinating facts on what makes each planet so special—like their size, distance from

the sun, what the surface is like, how many moons they have, and more! This planets for kids book includes: Big, beautiful images—Vibrant photos will take kids deep into space and onto each planet—no telescope required. Astronomy for kids—Learn all about the eight planets in our solar system, plus dwarf planets Ceres, Pluto, Eris, Haumea, and Makemake. Fun space facts—Did you know the bubbles in soda are the same gas that's on Venus? Out of this world facts will keep kids glued to the page and excited to explore the sky. Show kids the amazing universe that surrounds them with this fun and engaging astronomy book.

*The Geometry Code* Bruce Rawles,2012-04 Integrate practical insights from modern physics, ancient Hermetic Laws, non-dual metaphysics, transpersonal psychology, and humor, as tools for undoing conflicting beliefs we've dreamed ourselves into. The seven Hermetic laws are explored in depth and demonstrate how a mindfulness that embraces 'other' as 'self' can reverse the typical misapplication of these inescapable laws of Mentalism, Correspondence, Vibration, Polarity, Rhythm, Cause & Effect and Generation. Ubiquitous geometric symbols, paired to each of these laws - the circle, vesica piscis, sine wave, line, spiral, fractal and yin-yang - and their countless commonplace variations, seen from the vantage point of shared interests, reflect these ideas. The inspired use of natural law restores attributes of life, love, strength, purity, beauty, perfection and gratitude to our awareness.

*Global Trends 2040* National Intelligence Council,2021-03 The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come. -Global Trends 2040 (2021) Global Trends 2040-A More Contested World

(2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics- by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.
