Welcome to the Universe in 3D Neil deGrasse Tyson, Michael A. Strauss, J. Richard Gott, Robert J. Vanderbei, 2022-04-19 Presenting a rich array of stereoscopic color images, which can be viewed in 3D using a special stereo viewer that folds easily out of the cover of the book, this book reveals your cosmic environment as you have never seen it before. Journey into the vast depths of the observable universe by visualising the most spectacular images in astronomy in stereoscopic 3D. *Welcome to the Universe in 3D* takes you on a grand tour of the observable universe, guiding you through the most spectacular sights in the cosmos in breathtaking 3D. Astronomy is the story of how humankind's perception of the two-dimensional dome of the sky evolved into a far deeper comprehension of an expanding three-dimensional cosmos. This book invites you to take part in this story by exploring the universe in depth, as revealed by cutting-edge astronomical research and observations. You will journey from the Moon through the solar system, out to exoplanets, distant nebulae, and galaxy clusters, until you finally reach the cosmic microwave background radiation (or CMB), the most distant light we can

observe. The distances to these celestial wonders range from 1.3 light-seconds to 13.8 billion light-years. Along the way, the authors explain the fascinating features of what you are seeing, including how the 3D images were made using the same technique that early astronomers devised to measure distances to objects in space. The dramatic 3D images in this one-of-a-kind book will astonish you, extending your vision out to the farthest reaches of the universe. You will never look up into the night sky the same way again.

An Apartment on Uranus Paul B.

Preciado, 2020-01-28 A “dissident of the gender-sex binary system” reflects on gender transitioning and political and cultural transitions in technoscientific capitalism. Uranus, the frozen giant, is the coldest planet in the solar system as well as a deity in Greek mythology. It is also the inspiration for uranism, a concept coined by the writer Karl Heinrich Ulrich in 1864 to define the “third sex” and the rights of those who “love differently.” Following Ulrich, Paul B. Preciado dreams of an apartment on Uranus where he might live beyond existing power, gender and racial strictures invented by modernity. “My trans condition is a new form of uranism,” he writes. “I am not a man. I am not a woman. I am not heterosexual. I am not homosexual. I am not bisexual. I am a dissident of the gender-sex binary system. I am the multiplicity of the cosmos trapped in a binary political and epistemological system, shouting in front of you. I am a uranist confined inside the limits of technoscientific capitalism.” This book recounts Preciado's

transformation from Beatriz into Paul B., but it is not only an account of gender transitioning. Preciado also considers political, cultural, and sexual transition, reflecting on issues that range from the rise of neo-fascism in Europe to the technological appropriation of the uterus, from the harassment of trans children to the role museums might play in the cultural revolution to come. *An Apartment on Uranus* is a bold, transgressive, and necessary book.

Cool Stuff 2.0 Chris Woodford, Jon Woodcock, 2007-09-17 *Cool Stuff 2.0: And How it Works* shows and explains, in a brilliantly visual and easy-to-understand way, exactly how the technology that shapes our world works. The Outer Planets Britannica Educational Publishing, 2011-05-01 As our ability to observe space improves with ever-progressing technology, we better grasp the farthest reaches of the cosmos and heighten our understanding of the universe in its entirety. Spacecraft exploration of the outermost planets in our solar system—Jupiter, Saturn, Uranus, and Neptune—reveals many features of these seemingly harsh environments and moves us

closer to comprehending the origins of our own planet as well as others. This insightful volume examines the characteristics of these remote planets and the paths they illuminate in our quest for celestial knowledge.

Sizing Up the Universe J. Richard Gott, Robert J. Vanderbei, 2011 Using space photographs and scaled maps, demonstrates the actual size of objects in the cosmos, from Buzz Aldrin's historic footprint on the Moon to the entire visible universe, with a gatefold of the Gott-Juric Map of the Universe.

Encyclopedia of the Solar System Lucy-Ann McFadden, Torrence Johnson, Paul Weissman, 2006-12-18 Long before Galileo published his discoveries about Jupiter, lunar craters, and the Milky Way in the *Starry Messenger* in 1610, people were fascinated with the planets and stars around them. That interest continues today, and scientists are making new discoveries at an astounding rate. Ancient lake beds on Mars, robotic spacecraft missions, and new definitions of planets now dominate the news. How can you take it all in? Start with the new *Encyclopedia of the Solar System*, Second Edition. This self-contained reference follows the trail blazed by the bestselling first edition. Beyond the Galaxy Ethan Siegel, 2015-11-26 A look up at the night sky reveals a treasury of wonders. Even to the naked eye, the Moon, stars, planets, the Milky Way and even a few star clusters and nebulae illuminate the heavens. For millennia, humans struggled to make sense of what's out there in the Universe, from all we can see to that which lies beyond the limits of even our most powerful telescopes. Beyond the Galaxy traces our journey from an ancient, Earth-centered Universe all the way to our modern, 21st century understanding of the cosmos. Touching on not only what we know but also how we know it, Ethan Siegel takes us to the very frontiers of modern astrophysics and

cosmology, from the birth of our Universe to its ultimate fate, and everything in between.--

Exploring Creation with Astronomy Jeannie K. Fulbright, 2004 This wonderful book uses the classical and Charlotte Mason methodology to give elementary school students an introduction to our solar system and the universe that contains it. Narration and notebooking are used to encourage critical thinking, logical ordering, retention, and record keeping. Each lesson in the book is organized with a narrative, some notebook work, an activity, and a project. The activities and projects use easy-to-find household items and truly make the lessons come alive! They include making a solar eclipse, making craters like those found on Mercury, simulating the use of radar to determine hidden landscape, keeping track of the phases of the moon, making a telescope, making fog, and making an astrometer to measure the brightness of a star. Although designed to be read by the parent to elementary students of various grade levels, it is possible for students with a 4th-grade reading level to read this book on their own. Grades K-6.
