The Last Warrior Andrew F Krepinevich,Barry D Watts,2015-01-06 Andrew Marshall is a Pentagon legend. For more than four decades he has served as Director of the Office of Net Assessment, the Pentagon's internal think tank, under twelve defense secretaries and eight administrations. Yet Marshall has been on the cutting edge of strategic thinking even longer than that. At the RAND Corporation during its golden age in the 1950s and early 1960s, Marshall helped formulate bedrock concepts of US nuclear strategy that endure to this day; later, at the Pentagon, he pioneered the development of net assessment -- a new analytic framework for understanding the long-term military competition between the United States and the Soviet Union. Following the Cold War, Marshall successfully used net assessment to anticipate emerging disruptive shifts in military affairs, including the revolution in precision warfare and the rise of China as a major strategic rival of the United States. In The Last Warrior, Andrew Krepinevich and Barry Watts -- both former members of Marshall's staff -- trace Marshall's intellectual development from his upbringing in Detroit during the Great Depression to his decades in Washington as an influential behind-the-scenes advisor on American defense strategy. The result is a unique insider's perspective on the changes in US strategy from the dawn of the Cold War to the present day. Covering some of the most pivotal episodes of the last half-century and peopled with some of the era's most influential figures, The Last Warrior tells Marshall's story for the first time, in the process providing an unparalleled history of the evolution of the American defense establishment.

Gender and Transport ,2007 The Bulletin is an annual peer-reviewed journal of the Transport and Tourism Division of the Economic and Social Commission for Asia and the Pacific (ESCAP). Intelligence, Surveillance, and Reconnaissance United States. Government Accountability Office,2008 The Department of Defense's (DOD) intelligence, surveillance, and reconnaissance (ISR) capabilities-such as satellites and unmanned aircraft systems-are crucial to military operations, and demand for ISR capabilities has increased. For example, DOD plans to invest $28 billion over the next 7 years in 20 airborne ISR systems alone. Congress directed DOD to fully integrate its ISR capabilities, also known as the ISR enterprise, as it works to meet

current and future ISR needs. GAO was asked to (1) describe the challenges, if any, that DOD faces in integrating its ISR enterprise, (2) assess DOD's management approach for improving integration of its future ISR investments, and (3) evaluate the extent to which DOD has implemented key activities to ensure proposed new ISR capabilities fill gaps, are not duplicative, and use a joint approach to meeting warfighters' needs. GAO assessed DOD's integration initiatives and 19 proposals for new ISR capabilities. We supplemented this analysis with discussions with DOD officials.

  Inventing the Internet Janet Abbate,2000-07-24 Janet Abbate recounts the key players and technologies that allowed the Internet to develop; but her main focus is always on the social and cultural factors that influenced the Internet's design and use. Since the late 1960s the Internet has grown from a single experimental network serving a dozen sites in the United States to a network of networks linking millions of computers worldwide. In Inventing the Internet, Janet Abbate recounts the key players and technologies that allowed the Internet to develop; but her main focus is always on the social and cultural factors that influenced the Internets design and use. The story she unfolds is an often twisting tale of collaboration and conflict among a remarkable variety of players, including government and military agencies, computer scientists in academia and industry, graduate students, telecommunications companies, standards organizations, and network users. The story starts with the early networking breakthroughs formulated in Cold War think tanks and realized in the Defense Department's creation of the ARPANET. It ends with the emergence of the Internet and its rapid and seemingly chaotic growth. Abbate looks at how academic and military influences and attitudes shaped both networks; how the usual lines between producer and user of a technology were crossed with interesting and unique results; and how later users invented their own very successful applications, such as electronic mail and the World Wide Web. She concludes that such applications continue the trend of decentralized, user-driven development that has characterized the Internet's entire history and that the key to the Internet's success has been a commitment to flexibility and diversity, both in technical design and in organizational culture.

Blues, Ideology, and Afro-American Literature Houston A. Baker, Jr.,2013-11-22 Relating the blues to American social and literary history and to Afro-American expressive culture, Houston A. Baker, Jr., offers the basis for a broader study of American culture at its vernacular level. He shows how the blues voice and its economic undertones are both central to the American narrative and characteristic of the Afro-American way of telling it.

Crossing Borders Through Folklore Alma Jean Billingslea-Brown,1999 Examining works by Toni Morrison, Paule Marshall, Faith Ringgold, and Betye Saar, this innovative book frames black women's aesthetic sensibilities across art forms. Investigating the relationship between vernacular folk culture and formal expression, this study establishes how each of the four artists engaged the identity issues of the 1960s and used folklore as a strategy for crossing borders in the works they created during the following two decades. Because of its interdisciplinary approach, this study will appeal to students and scholars in many fields, including African American literature, art history, women's studies, diaspora studies, and cultural studies.

Computer Martin Campbell-Kelly,2013 Computer: A History of the Information Machine traces the history of the computer and shows how business and government were the first to explore its unlimited, information-processing potential. Old-fashioned entrepreneurship combined with scientific know-how inspired now famous computer engineers to create the technology that became IBM. Wartime needs drove the giant ENIAC, the first fully electronic computer. Later, the PC enabled modes of computing that liberated people from room-sized, mainframe computers.

This third edition provides updated analysis on software and computer networking, including new material on the programming profession, social networking, and mobile computing. It expands its focus on the IT industry with fresh discussion on the rise of Google and Facebook as well as how powerful applications are changing the way we work, consume, learn, and socialize. Computer is an insightful look at the pace of technological advancement and the seamless way computers are integrated into the modern world. Through comprehensive history and accessible writing, Computer is perfect for courses on computer history, technology history, and information and society, as well as a range of courses in the fields of computer science, communication, sociology, and management.
