Convergence National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Key Challenge Areas for Convergence and Health, 2014-06-16

Convergence of the life sciences with fields including physical, chemical, mathematical, computational, engineering, and social sciences is a key strategy to tackle complex challenges and achieve new and innovative solutions. However, institutions face a lack of guidance on how to establish effective programs, what challenges they are likely to encounter, and what strategies other organizations have used to address the issues that arise. This advice is needed to harness the excitement generated by the concept of convergence and channel it into the policies, structures, and networks that will enable it to realize its goals. Convergence investigates examples of organizations that have established mechanisms to support convergent research. This report discusses details of current programs, how organizations have chosen to measure success, and what has worked and not worked in varied settings. The report summarizes the lessons learned and provides organizations with strategies to tackle practical needs and implementation challenges in areas such as infrastructure, student education and training, faculty advancement, and inter-institutional partnerships.

Dolmens in the Levant James A. Fraser, 2018-01-17 When Western explorers first encountered dolmens in the Levant, they thought they had discovered the origins of a megalithic phenomenon that spread as far as the Atlantic coast. Although European dolmens are now considered an unrelated tradition, many researchers continue to approach dolmens in the Levant as part of a trans-regional phenomenon that spanned the Taurus mountains to the Arabian peninsula. By tightly defining the term 'dolmen' itself, this book brings these mysterious monuments into sharper focus. Drawing on historical, archaeological and geological sources, it is shown that dolmens in the Levant mostly concentrate in the eastern escarpment of the Jordan Rift Valley, and in the Galilean hills. They cluster near proto-urban settlements of the Early Bronze I period (3700–3000 BCE) in particular geological zones suitable for the extraction of megalithic slabs. Rather than approaching dolmens as a regional phenomenon, this book considers dolmens as part of a local burial tradition whose tomb forms varied depending on geological constraints. *Dolmens in the Levant* is essential for anyone interested in the rise of civilisations in the ancient Middle East, and particularly those who have wondered at the origins of these enigmatic burial monuments that dominate the landscape.

(Re-)Framing the Arab/Muslim Silke Schmidt, 2014-10-31 Media depictions of Arabs and Muslims continue to be framed by images of camels, belly dancers, and dagger-wearing terrorists. But do only Hollywood movies and TV news have the power to frame public discourse? This interdisciplinary study transfers media framing theory to literary studies to show how life writing (re-)frames Orientalist stereotypes. The innovative analysis of the post-9/11 autobiographies »West of Kabul, East of New York«, »Letters from Cairo«, and »Howling in Mesopotamia« makes a powerful claim to approach literature based on a theory of production and reception, thus enhancing the multi-disciplinary potential of framing theory.
