Buzz Aldrin, Leonard David

Sams Teach Yourself Network Troubleshooting in 24 Hours

Jonathan Feldman,2003 Covers topics including black box troubleshooting strategies, documentation, cable modems, wireless infrastructure, enterprise routers, and lag problems.

Mission to Mars Buzz Aldrin,Leonard David,2013-05-07 Can astronauts reach Mars by 2035? Absolutely, says Buzz Aldrin, one of the first men to walk on the moon. Celebrated astronaut, brilliant engineer, bestselling author, Aldrin believes it is not only possibly but vital to America's future to keep pushing the space frontier outward for the sake of exploration, science, development, commerce, and security. What we need, he argues, is a commitment by the U.S. President as rousing as JFK's promise to reach the moon by the end of the 1960 - an audacious, inspiring goal-and a unified vision for space exploration. In *Mission to Mars*, Aldrin plots that trajectory, stressing that American-led space exploration is essential to the economic and technological vitality of the nation and the world. Do you dare to dream big? Then join Aldrin in his thought provoking and inspiring *Mission to Mars*.

Mental Models Indi Young,2008-02-01 There is no single methodology for creating the perfect product—but you can increase your odds. One of the best ways is to understand users' reasons for doing things. Mental Models gives you the tools to help you grasp, and design for, those reasons. Adaptive Path co-founder Indi Young has written a roll-up-your-sleeves book for designers, managers, and anyone else interested in making design strategic, and successful.

Liars and Outliers Bruce Schneier,2012-01-27 In today's hyper-connected society, understanding the mechanisms of trust is crucial. Issues of trust are critical to solving problems as diverse as corporate responsibility, global warming, and the political system. In this insightful and entertaining book, Schneier weaves together ideas from across the social and biological sciences to explain how society induces trust. He shows the unique role of trust in facilitating and stabilizing human society. He discusses why and how trust has evolved, why it works the way it does, and the ways the information society is changing everything.

The Cosmos on a Shoestring Liam Sarsfield,1998 Small

spacecraft have become popular for a number of reasons, most prominently the needs to reduce overall cost, be built more quickly, and spread mission risks. NASA has been challenged with crafting a program that continues to produce meaningful science within the constraints of the available budget. Still, pound for pound, small spacecraft are not precisely inexpensive, given the effects of complexity, launch costs, and a greater degree of risk. Historically, science spacecraft have demonstrated increasing reliability, but this trend might not continue, given the shift to managed risk. There is generally less money available to smaller programs to test spacecraft functions and operational procedures prior to launch. Small spacecraft are also generally less robust. Efforts to reduce failure potentials through the application of more reliable components, better testing, and advanced design techniques should receive greater attention. Despite the risks, however, small spacecraft fulfill important roles in earth science, astrophysics, space physics, and planetary science. NASA's current generation

of small spacecraft is capable of impressive levels of performance.

Space Systems Failures David M. Harland,Ralph

Lorenz,2007-09-14 The very first book on space systems failures written from an engineering perspective. Focuses on the causes of the failures and discusses how the engineering knowledge base has been enhanced by the lessons learned. Discusses non-fatal anomalies which do not affect the ultimate success of a mission, but which are failures nevertheless. Describes engineering aspects of the spacecraft, making this a valuable complementary reference work to conventional engineering texts.

Starcraft: Ghost--Nova Blizzard Entertainment,Keith R. A.

DeCandido,2007-05-01 Four years after the end of the Brood War, Emperor Arcturus Mengsk has rebuilt much of the Terran Dominion and consolidated a new military force despite an ever-present alien threat. Within this boiling cauldron of strife and subversion, a young woman known only as Nova shows the potential to become Mengsk's most lethal and promising Ghost operative. Utilizing a combination of pure physical aptitude, innate psychic power, and advanced technology, Nova can strike anywhere with the utmost stealth. Like a phantom in the shadows, she exists only as a myth to the enemies of the Terran Dominion. Yet Nova wasn't born a

killer. She was once a privileged child of one of the Old Families of the Terran Confederacy, but her life changed forever when a rebel militia murdered her family. In her grief, Nova unleashed her devastating psychic powers, killing hundreds in a single, terrible moment. Now, on the run through the slums of Tarsonis, she is unable to trust anyone. Pursued by a special agent tasked with hunting down rogue telepaths, Nova must come to terms with both her burgeoning powers and her guilt -- before they consume her and destroy everything in her path....

Impact Jupiter David H. Levy,2013-11-11 Amateur astronomer and Shoemaker-Levy 9 comet co-discoverer David Levy recounts the story of the crash of the comet into the surface of Jupiter on July 16, 1994, and what the celestial impact taught scientists and the world.

Developing Basic Space Science World-Wide Willem

Wamsteker,Rudolf Albrecht,Hans J. Haubold,2007-05-08 ? J. Andersen Niels Bohr Institute for Astronomy Physics and

Geophysics Astronomical Observatory Copenhagen ja@astro.ku.dk

The development of astronomy worldwide begins at the roots:

Already from childhood, humans of all nations and civilizations seem to share an innate fascination with the sky. Yet, people in different regions of the world have vastly different possibilities for pursuing this interest. In wealthy, industrialised societies the way is open to a school or higher education in science, possibly leading to a career in astronomy or basic or applied space science for the benefit of the country as well as the individual. In other regions, neither the financial nor the trained human resources are sufficient to offer that avenue to the future of the young generation, or those intellectual resources to the development of their country. This book addresses ways and means by which these obstacles can be, if not fully overcome, then at least significantly reduced.

Dead Space: Martyr Brian Evenson, 2011-04-26 Martyr is the first novel in the amazingly imaginative Dead Space video game universe that looks deep into the origins of humanity and the vast onslaught of horrifying creatures known as necromorphs.

Managerial Communication Geraldine E. Hynes, Jennifer R. Veltsos, 2018-01-20 A Practical, Strategic Approach to Managerial Communication Managerial Communication: Strategies and

Applications focuses on communication skills and strategies that managers need to be successful in today's workplace. Known for its holistic overview of communication, solid research base, and focus on managerial competencies, this text continues to be the market leader in the field. In the Seventh Edition, author Geraldine E. Hynes and new co-author Jennifer R. Veltsos preserve the book's strategic perspective and include new updates to reflect the modern workplace. The new edition adds a chapter on visual communication that explains how to design documents, memorable presentations, and impactful graphics. New coverage of virtual teams, virtual presentations, and online communication help students avoid common pitfalls when using technology. This is probably the best book on Managerial Communication in the market. –Astrid Sheil, California State University San Bernardino

Status Update Alice E. Marwick, 2013-11-26 Presents an analysis of social media, discussing how a technology which was once heralded as democratic, has evolved into one which promotes elitism and inequality and provides companies with the means of invading privacy in search of profits.
