Machinations of the Space Princess (Monochrome) James Desborough,2018-06-29 Machinations of the Space Princess is a Science-Fantasy role-playing game. That means it's very much about style over substance, mixing science-fiction, magic and psionics in a game world that owes much more to Metal Hurlant and Star Wars than it does to 2001 or Bova's Grand Tour. This is a game of strangeness and fun, of space pirates and beautiful alien princesses, of living planets and robot hordes, of blasters at noon. This is... Sexy, sleazy, swords and sci-fi! A full game combining old and new school thinking, packed with GM and player advice and with simple tools for creating your own monsters, adversaries, weapons, armour, ships and alien races.

Federations Teo Vincent,2015-11-16 Now imagine yourself a Unit Commander in control of four Spaceships, each fully equipped with Torpedoes, explosives that are shot in a straight path, and Phasers, destructive beams that strike at 45 angles. You are battling another Commander who also has four Spaceships with the same weaponry. Each of you has captured one of your opponent's ships and you want yours released! Your ships happened to be on Territorial Boundary Scouting Duty when a unjust action was taken against your Federation. You must eliminate your opponent's ships to allow a route for your Federation to confront your opponent with terms. In other words, to win, you must destroy all of your opponent's available ships and keep as many of your ships as unharmed as possible. Federations Space Battle is an extraordinary futuristic 2 player board game that lasts from 30 minutes to 2 hours depending on your skill. Customize the game by naming your own Federation and Spaceships. Compete in strategic positioning, protective shielding and weapon deployment of your Spaceships. Ages: 8 to 108. 80 Scoreboards are included.

Learn Blackberry Games Development Carol Hamer,Andrew Davison,2010-04-29 BlackBerry smart phones aren't just for business. In fact, throw away that boring spreadsheet, tear up that yearly budget report—the BlackBerry is a lean, mean game-playing machine. Carol Hamer and Andrew Davison, expert software game developers, show you how to leverage the BlackBerry Java™ Development Environment (based on Java ME) to design and create fun, sophisticated game applications from role playing to dueling with light sabers. The BlackBerry: not as clumsy or as random as a blaster—an elegant device, for a more civilized age. In this book, Carol and Andrew give you the professional techniques you need to use music, 2D and 3D graphics, maps, and game design patterns to build peer-to-peer games, role playing games, and more for the BlackBerry.

Data Analysis Edward L. Wike,2006-08-01 This book is intended for psychology majors and graduate students who are conducting experiments for the first time and are faced with the task of making sense out of their data. This much needed how-to-do-it text illustrates the application of statistical methods to the data from small samples. It also serves as a handbook, with twenty-two tables presented at the end of the text that will allow the student to carry out virtually every computation necessary in analyzing his data. Almost all of the examples and illustrations are drawn from actual experiments so that the student can see how professional scientists examine their data. The book also shows students the kinds of data that are encountered in psychological research, the kinds of questions investigators seek to answer, and how these questions are approached. The author asserts that statistics is not an abstract discipline but a tool in research. However, the book also imparts a philosophy of data analysis and its meaning, a concern for questions of the function of data analysis and the interpretations that legitimately can be drawn from data. In brief,“Data Analysis” asks: What kinds of data are met in psychological research? What can we do with these data? What can we conclude as a result of this doing? The book will be invaluable for students who, even though they may have taken a previous statistics course, are still unsure of what statistical techniques should be used in interpreting their data. Edward L. Wike“was educated at the University of California at Los Angeles, where he received his Ph.D. in experimental psychology in 1952. He has contributed many articles to psychology journals and is currently Professor of Psychology, University of Kansas. He was a member of American Psychology Association, Sigma Xi, as well as the Psychonomic Society. He was named Outstanding Educator in America in 1975.

Zones of Control Pat Harrigan,Matthew G. Kirschenbaum,2016-04-15 Examinations of wargaming for entertainment, education, and military planning, in terms of design, critical analysis, and historical contexts. Games with military themes date back to antiquity, and yet they are curiously neglected in much of the academic and trade literature on games and game history. This volume fills that gap, providing a diverse set of perspectives on wargaming's past, present, and future. In Zones of Control, contributors consider wargames played for entertainment, education, and military planning, in terms of design, critical analysis, and historical contexts. They consider both digital and especially tabletop games, most of which cover specific historical conflicts or are grounded in recognizable real-world geopolitics. Game designers and players will find the historical and critical contexts often missing from design and hobby literature; military analysts will find connections to game design and the humanities; and academics will find documentation and critique of a sophisticated body of cultural work in which the complexity of military conflict is represented in ludic systems and procedures. Each section begins with a long anchoring chapter by an established authority, which is followed by a variety of shorter pieces both analytic and anecdotal. Topics include the history of playing at war; operations research and systems design; wargaming and military history; wargaming's ethics and politics; gaming irregular and non-kinetic warfare; and wargames as artistic practice. Savanna Woody Plants and Large Herbivores Peter Frank Scogings,Mahesh Sankaran,2019-09-30 Insights on current research and recent developments in understanding global savanna systems Increasingly recognized as synonymous with tropical grassy biomes, savannas are found in tropical and sub-tropical climates as well as warm, temperate regions of North America. Savanna Woody Plants and Large Herbivores examines the interactions between woody plants and browsing mammals in global savannas—focusing primarily on the C4 grassy ecosystems with woody components that constitute the majority of global savannas—and discusses contemporary savanna management models and applications. This much-needed addition to current research examines topics including the varying behavior of browsing mammals, the response to browsing by woody species, and the factors that inhibit forage intake. Contributions from an international team of active researchers and experts compare and contrast different savanna ecosystems, offering a global perspective on savanna functioning, the roles of soil and climate in resource availability and organism interaction, and the possible impacts of climate change across global savannas. Fills a gap in literature on savanna management issues, including biodiversity conservation and animal production Applies concepts developed in other biomes to future savanna research Complements contemporary books on savanna or large herbivore ecology Focuses on the woody component of savanna ecosystems and large herbivore interactions in savannas Compares tree-mammal systems of savannas and other eco-systems of temperate and boreal regions Provides numerous case studies of plant-mammal interactions from various savanna ecosystems Savanna Woody Plants and Large Herbivores is a valuable addition to those in fields such as ecology, wildlife and conservation biology, natural resource management, and environmental science.
