Beth Jackson

Thomas Scientific ,2000

A Beta's Regret Beth Jackson,2023-12-04 Jake is Midnight Forest Pack's Beta, incredibly popular and handsome, always surrounded by friends, and is successful in business and as his role in pack as Beta. Yet part of his life feels incomplete. Seeing all of his friends settled down with their mates and now having children, Jake can't help but wonder where he went wrong or think if he will forever be alone. Avoidance seems to be the best tactic, and Jake pushes himself harder into work, where an unexpected encounter at a business meeting gets his heart racing and turns his life upside down. Rose, this seemingly perfect, beautiful fated mate of his, has somewhat of an unusual reaction to meeting her mate. Are you meant to be doing your best to avoid your new mate? Or be keeping secrets from him? Not to mention Rose comes from the other side of the world and plans to head home as soon as she can, with promises of keeping in touch, and working things out with time and space. Jake is just happy to finally have his mate, and willing to do all he can to have her by his side. Would Jake be willing to leave all he knows for fate? Or could it be the moon goddess made a mistake, and Jake is better off alone? Or is there a better match out there for him?

This book gives you a clear picture of YUI through a step-by-step approach, packed with lots of examples. YUI 2.8: Learning the Library covers all released (non-beta) components of the YUI 2.8 Library in detail with plenty of working examples, looking at the classes that make up each component and the properties and methods that can be used. It includes a series of practical examples to reinforce how each component should/can be used, showing its use to create complex, fully featured, cross-browser, Web 2.0 user interfaces. It has been updated from its first edition with the addition of several chapters covering several new controls and enriched with lots of experience of using them. You will learn to create a number of powerful JavaScript controls that can be used straightaway in your own applications. Besides giving you a deep understanding of the YUI library, this book will expand your knowledge of object-oriented JavaScript programming, as well as strengthen your understanding of the DOM and CSS. The final chapter describes many of the tools available to assist you the developer in debugging, maintaining, and ensuring the best quality in your code. In this new edition, all the examples have been updated to use the most recent coding practices and style and new ones added to cover newer components. Since the basic documentation for the library is available online, the focus is on providing insight and experience. The authors take the reader from beginner to advanced-level YUI usage and understanding. The beginner to advanced-level guide for understanding the YUI library

The Draka & The Giant Liane Zane,2022-12-15 With supernatural stakes never higher, everything rides on her. Three years ago, Alžběta Černá, an officer in the Czech military intelligence, learned that she's got angel blood. In fact, she's one of the Elioud, the hybrid race tasked by Archangel Michael to protect humanity. A lone wolf, Beta ignores her newfound ancestry. She suspects she's not cut out for the Elioud mission. Worse, she has to team up with András Nagy, a Hungarian Elioud warrior who drives her wild with exasperation—and desire. After András saves her life during a failed mission, Beta's entire existence is upended. And she's not the same woman she was. Something dark has descended upon her. So she flees. From her best friends and their Elioud mates. From András, who'd given himself to the taciturn Czech, body and soul. Back to the VZ where she's sent on a years-long deep-cover assignment that subsumes her. Heartbroken at Beta's untraceable disappearance, András becomes a stone-cold Elioud killer. Just in time to face the growing Dark angelic threat: emboldened daemonic hordes attack humans throughout Central Europe. András tracks a particularly nasty band of demons one night to Prague where he picks up a trace of the woman he'd loved and lost—only to realize that they are now on opposite sides.

Engineering Mechanics Benson H. Tongue, Daniel T. Kawano, 2020-09-29 Dynamics can be a major frustration for those students who don't relate to the logic behind the material -- and this includes many of them! Engineering Mechanics: Dynamics meets their needs by combining rigor with user friendliness. The presentation in this text is very personalized, giving students the sense that they are having a one-on-one discussion with the authors. This minimizes the air of mystery that a more austere presentation can engender, and aids immensely in the students' ability to retain and apply the material. The authors do not skimp on rigor but at the same time work tirelessly to make the material accessible and, as far as possible, fun to learn.

Log-Gases and Random Matrices (LMS-34) Peter J. Forrester, 2010-07-01 Random matrix theory, both as an application and as a theory, has evolved rapidly over the past fifteen years. Log-Gases and Random Matrices gives a comprehensive account of these developments, emphasizing log-gases as a physical picture and heuristic, as well as covering topics such as beta ensembles and Jack polynomials. Peter Forrester presents an encyclopedic development of log-gases and random matrices viewed as examples of integrable or exactly solvable systems. Forrester develops not only the application and theory of Gaussian and circular ensembles of classical random matrix theory, but also of the Laguerre and Jacobi ensembles, and their beta extensions. Prominence is given to the computation of a multitude of Jacobians; determinantal point processes and orthogonal polynomials of one variable; the Selberg integral, Jack polynomials, and generalized hypergeometric functions; Painlevé transcendents; macroscopic electrostatics and asymptotic formulas; nonintersecting paths and models in statistical mechanics; and applications of random matrix theory. This is the first textbook development of both nonsymmetric and symmetric Jack polynomial theory, as well as the connection between Selberg integral theory and beta ensembles. The author provides hundreds of guided exercises and linked topics, making Log-Gases and Random Matrices an indispensable reference work, as well as a learning resource for all students and researchers in the field.

New Trends in Emerging Complex Real Life Problems Patrizia Daniele, Laura Scrimali, 2018-12-30 This book gathers the contributions of the international conference "Optimization and Decision Science" (ODS2018), which was held at the Hotel Villa Diodoro, Taormina (Messina), Italy on September 10 to 13, 2018, and was organized by AIRO, the Italian Operations Research Society, in cooperation with the DMI (Department of Mathematics and Computer Science) of the University of Catania (Italy). The book offers state-of-the-art content on optimization, decisions science and problem solving methods, as well as their application in industrial and territorial systems. It highlights a range of real-world problems that are both challenging and worthwhile, using models and methods based on continuous and discrete optimization, network optimization, simulation and system dynamics, heuristics, metaheuristics, artificial intelligence, analytics, and multiple-criteria decision making. Given its scope of coverage, it will benefit not only researchers and practitioners working in these areas, but also the operations research community as a whole.

Optimization and Decision Science: Methodologies and Applications Antonio Sforza, Claudio Sterle, 2017-11-03 This proceedings volume highlights the state-of-the-art knowledge related to optimization, decisions science and problem solving methods, as well as their application in industrial and territorial systems. It includes contributions tackling these themes using models and methods based on continuous and discrete optimization, network optimization, simulation and system dynamics, heuristics, metaheuristics, artificial intelligence, analytics, and also multiple-criteria decision making. The number and the increasing size of the problems arising in real life require mathematical models and solution methods adequate to their complexity. There has also been increasing research interest in Big Data and related challenges. These challenges can be recognized in many fields and systems which have a significant impact on our way of living: design, management and control of industrial production of goods and services; transportation planning and traffic management in urban and regional areas; energy production and exploitation; natural resources and environment protection; homeland security and critical infrastructure protection; development of advanced information and communication technologies. The chapters in this book examine how to deal with new and emerging practical problems arising in these different fields through the presented methodologies and their applications. The chapter topics are applicable for researchers and practitioners working in these areas, but also for the operations research community. The contributions were presented during the international conference “Optimization and Decision Science” (ODS2017), held at Hilton Sorrento Palace Conference Center, Sorrento, Italy, September 4 – 7, 2017. ODS 2017, was organized by AIRO, Italian Operations Research Society, in cooperation with DIETI (Department of Electrical Engineering and Information Technology) of University “Federico II” of Naples.
