The use of water in the thermal cycle of internal combustion engines – HHO 5/7 Ernesto Ascione,2017-02-23 We all know what has become expensive to travel by car, but not only, even those who use it for work or passion whatever means having an engine; it's a car, a truck, a vehicle of work, a boat, etc.etc. must put fuel that is petrol, diesel, LPG or natural gas, however, it has costs. For some time there is a low-cost solution, which allows not just to bring down the entire costs but to reduce them by 10 to 50%. The solution is called oxyhydrogen abbreviated HHO. It is a very simple system of splitting water into a mixture of oxygen and HHO hydrogen through electrolysis. With this book we want to illustrate the informants of this new technology criteria, trying to adopt a simple language that can be understood by all, in order to contribute to the protection of human health and the environment.

The Right Sensory Mix Diana Derval,2022-04-08 Many companies fail to acknowledge and analyze disparities observed among customers and simply put them down to culture or emotion. New neuroendocrinological research proves that people are rational: They just have a different biological perception of the same stimulus. Their preferences, behavior, and decisions are

strongly influenced by the hundreds of millions of sensors monitoring their body and brain. People with more taste buds are, for example, sensitive to bitterness and are more likely to drink their coffee with sugar or milk, or to drink tea. This book helps product managers, marketers, and corporate decision-makers understand and predict customers' behavior and preferences. It provides the tools to design the right sensory mix (color, shape, depth, taste, smell, texture, and sound) for each product, and fine-tune their positioning and range for every local market. Using cases from different sectors, the author shows that this approach delivers planet and people-friendly innovations which have a higher chance of success in the market.
