**FTP Extensions for Variable Protocol Specification** National Aeronautics and  
Space Adm Nasa,2018-09-25 The specification for the File Transfer Protocol (FTP)  
assumes that the underlying network protocols use a 32-bit network address and a 16-bit  
transport address (specifically IP version 4 and TCP). With the deployment of version 6 of  
the Internet Protocol, network addresses will no longer be 32-bits. This paper species  
extensions to FTP that will allow the protocol to work over a variety of network and  
transport protocols. Allman, Mark and Ostermann, Shawn Glenn Research Center

*A Field Guide to Genetic Programming* ,2008 Genetic programming (GP) is a  
systematic, domain-independent method for getting computers to solve problems  
automatically starting from a high-level statement of what needs to be done. Using ideas  
from natural evolution, GP starts from an ooze of random computer programs, and  
progressively refines them through processes of mutation and sexual recombination, until  
high-fitness solutions emerge. All this without the user having to know or specify the form  
or structure of solutions in advance. GP has generated a plethora of human-competitive  
results and applications, including novel scientific discoveries and patentable inventions.  
This unique overview of this exciting technique is written by three of the most active  
scientists in GP. See [www.gp-field-guide.org.uk](http://www.gp-field-guide.org.uk) for more information on the book.

*Computational Intelligence: A Compendium* John Fulcher,2008-05-28 Computational  
Intelligence: A Compendium presents a well structured overview about this rapidly  
growing field with contributions from leading experts in Computational Intelligence. The  
main focus of the compendium is on applied methods, tried-and-proven as being effective  
to realworld problems, which is especially useful for practitioners, researchers, students  
and also newcomers to the field. This state-of- handbook-style book has contributions by  
leading experts.

Complete Analytics with IBM DB2 Query Management Facility: Accelerating Well-Informed Decisions Across the Enterprise Kristi Ramey, Mike Biere, Peter Richardson, Shawn Sullivan, Jeremy Weatherall, IBM Redbooks, 2012-08-20 There is enormous pressure today for businesses across all industries to cut costs, enhance business performance, and deliver greater value with fewer resources. To take business analytics to the next level and drive tangible improvements to the bottom line, it is important to manage not only the volume of data, but the speed with which actionable findings can be drawn from a wide variety of disparate sources. The findings must be easily communicated to those responsible for making both strategic and tactical decisions. At the same time, strained IT budgets require that the solution be self-service for everyone from DBAs to business users, and easily deployed to thin, browser-based clients. Business analytics hosted in the Query Management Facility™ (QMFTM) on DB2® and System z® allow you to tackle these challenges in a practical way, using new features and functions that are easily deployed across the enterprise and easily consumed by business users who do not have prior IT experience. This IBM® Redbooks® publication provides step-by-step instructions on using these new features: Access to data that resides in any JDBC-compliant data source OLAP access through XMLA 150+ new analytical functions Graphical query interfaces and graphical reports Graphical, interactive dashboards Ability to integrate QMF functions with third-party applications Support for the IBM DB2 Analytics Accelerator A new QMF Classic perspective in QMF for Workstation Ability to start QMF for TSO as a DB2 for z/OS stored procedure New metadata capabilities, including ER diagrams and capability to federate data into a single virtual source
