Soares, 2021-06-28 With an updated edition including new material in additional chapters, this one-of-a-kind handbook covers not only current standardization efforts, but also anthropometry and optimal working postures, ergonomic human computer interactions, legal protection, occupational health and safety, and military human factor principles. While delineating the crucial role that standards and guidelines play in facilitating the design of advantageous working conditions to enhance individual performance, the handbook suggests ways to expand opportunities for global economic and ergonomic development. This book features: Guidance on the design of work systems including tasks, equipment, and workspaces as well as the work environment in relation to human capacities and limitations Emphasis on important human factors and ergonomic standards that can be utilized to improve product and process to ensure efficiency and safety A focus on quality control to ensure that standards are met throughout the worldwide market

Mastering Autodesk Inventor 2020 Curtis Waguespack, Autodesk Inventor was introduced in 1999 as an ambitious 3D parametric modeler based not on the familiar AutoCAD programming architecture but instead on a separate foundation that would provide the room needed to grow into the fully featured modeler it now is almost a decade later. Inventor 2009 marks a change of focus in the development of Inventor from an up-and-coming application to the current release with the inclusion of the design accelerator wizards and with refined core functions. The maturity of the Inventor tools happily coincides with the advancement of the CAD market's adoption of 3D parametric modelers as a primary design tool. And although it is important to understand that 2D CAD will likely never completely disappear from the majority of manufacturing design departments, 3D design will increasingly become a requirement for most. With this in mind, we have set out to fill the following pages with detailed information on the specifics of the tools, while addressing the principles of sound parametric design techniques.

Pro Android UI Wallace Jackson, 2014-03-05 If you're an Android application developer, chances are you're using fixed, scrolling, swipe-able, and other cutting-edge custom UI Designs in your Android development projects. These UI Design approaches as well as other Android ViewGroup UI layout containers are the bread and butter of Pro Android User Interface (UI) design and Android User Experience (UX) design and development. Using a top down approach, Pro Android UI shows you how to design and develop the best user interface for your app, while taking into account the varying device form factors in the increasingly fragmented Android environment. Pro Android UI aims to be the ultimate reference and customization cookbook for your Android UI Design, and as such will be useful to experienced developers as well as beginners. With Android's powerful UI layout classes, you can easily create everything from the simplest of lists to fully tricked-out user interfaces. While using these UI classes for boring, standard user interfaces can be quite simple, customizing a unique UI design can often become extremely challenging.

Graphical User Interfaces and Graphic Standards Jon Peddie, 1992

Management of Standard Graphic Symbols in a Computer-aided Design and Drafting Environment Using Neural Network Approaches Der-Shung Yang, 1994 Abstract: Computer-Aided Design and Drafting (CADD) systems have become prevalent for producing building design drawings. An ultimate goal of CADD systems is to automate analyses and communication of high-level design information extracted from CADD drawings, a difficult task because of the lack of CADD standards. Using standard graphic symbols attached with symbolic information can help, but locating symbols in large libraries is difficult. AUGURS is a new interactive tool designed to assist CADD users in utilizing standard symbols. The task of recognizing symbols sketched by CADD users differs from traditional pattern recognition problems in several ways. Standard libraries have over 1000 symbols, grouped into seven disciplines. The large symbol set makes training data difficult to obtain. Since AUGURS is embedded in the CADD system, it must be efficient and compact. Also, it needs to handle irregular distortion in symbols sketched by users. These difficulties are lessened by the special output format that requires AUGURS to perform only 'admissible' recognition, classifying the input to a small set of plausible symbols. The symbol recognition program in AUGURS is a neural network similar to the Neocognitron, but is more compact and efficient and having better recognition performance. The main thrust of the AUGURS approach is a novel network structure encoded with general knowledge balancing the discriminant power and the noise tolerance of the network. To handle large symbol sets, another thrust of the AUGURS approach is to construct a network by first building an integrated network from the internal structures of smaller networks trained on sub-tasks, and then pruning unnecessary components from this integrated network. This research contains an extensive empirical study of numerous related work varying conditions and parameters. The results demonstrate the superiority of the AUGURS approach over many alternatives, including Zipcode Nets, an unconstrained network, networks using such invariant features as Zernike moments, pseudo-Zernike moments, normalized moments, and Fourier-Mellin descriptors, the Integrated Neural Network, and the connectionist gluing approach. A practicality analysis shows that AUGURS can handle around 100 symbols, about the size of a discipline library. To enable AUGURS to handle even more symbols, future work is planned to augment it with domain-specific knowledge and other improvements.

MAPPING: Management and Processing of Images for Population Imaging Michel Dojat, Wiro Niessen, David N. Kennedy, 2017-09-04 Several recent papers underline methodological points that limit the validity of published results in imaging studies in the life sciences and especially the neurosciences (Carp, 2012; Ingre, 2012; Button et al., 2013; Ioannidis, 2014). At least three main points are identified that lead to biased conclusions in research findings: endemic low statistical power and, selective outcome and selective analysis reporting. Because of this, and in view of the lack of replication studies, false discoveries or solutions persist. To overcome the poor reliability of research findings, several actions should be promoted including conducting large cohort studies, data sharing and data reanalysis. The construction of large-scale online databases should be facilitated, as they may contribute to the definition of a "collective mind" (Fox et al., 2014) facilitating open collaborative work or "crowd science" (Franzoni and Sauermann, 2014). Although technology alone cannot change scientists' practices (Wicherts et al., 2011; Wallis et al., 2013, Poldrack and Gorgolewski 2014; Roche et al. 2014), technical solutions should be identified which support a more "open science" approach. Also, the analysis of the data plays an important role. For the analysis of large datasets, image processing pipelines should be constructed based on the best algorithms available and their performance should be objectively compared to diffuse the more relevant solutions. Also, provenance of processed data should be ensured (MacKenzie-Graham et al., 2008). In population imaging this would mean providing effective tools for data sharing and analysis without increasing the burden on researchers. This subject is the main objective of this research topic (RT), cross-listed between the specialty section "Computer Image Analysis" of Frontiers in ICT and Frontiers in Neuroinformatics. Firstly, it gathers works on innovative solutions for the management of large imaging datasets possibly distributed in various centers. The paper of Danso et al. describes their experience with the integration of neuroimaging data coming from several stroke imaging research projects. They detail how the initial NeuroGrid core metadata schema was gradually extended for capturing all information required for future metaanalysis while ensuring semantic interoperability for future integration with other biomedical ontologies. With a similar preoccupation of interoperability, Shanoir relies on the OntoNeuroLog ontology (Temal et al., 2008; Gibaud et al., 2011; Batrancourt et al., 2015), a semantic model that formally described entities and relations in medical imaging, neuropsychological and behavioral assessment domains. The mechanism of "Study Card" allows to seamlessly populate metadata aligned with the ontology, avoiding fastidious manual entrance and the automatic control of the conformity of imported data with a predefined study protocol. The ambitious objective with the BIOMIST platform is to provide an environment managing the entire cycle of neuroimaging data from acquisition to analysis ensuring full provenance information of any derived data. Interestingly, it is conceived based on the product lifecycle management approach used in industry for managing products (here neuroimaging data) from inception to manufacturing. Shanoir and BIOMIST share in part the same OntoNeuroLog ontology facilitating their interoperability. ArchiMed is a data management system locally integrated for 5 years in a clinical environment. Not restricted to Neuroimaging, ArchiMed deals with multi-modal and multi-organs imaging data with specific considerations for data long-term conservation and confidentiality in accordance with the French legislation. Shanoir and ArchiMed are integrated into FLI-IAM1, the

national French IT infrastructure for in vivo imaging.

Moving Image Cataloging Martha M. Yee,2007-10-30 Libraries, archives, and museums hold a wide variety of moving images. all of which require the same level of attention to issues of organization and access as their print counterparts. Consequently, the people who create collection level records and metadata for these resources need to be equally conversant in the principles of cataloging. Martha Yee covers both descriptive (AACR2R, AMIM, and FIAF rules) and subject cataloging (with a focus on LCSH). In the process, the reader is encouraged to think critically and to be prepared to make decisions in ambiguous situations where solutions to problems are not always obvious or clearly dictated by specific rules.

Standardization: A Business Approach to the Role of National Standardization Organizations Henk J. de Vries,2013-06-29 This study fills a gap in standardization literature. It is the first academic analysis of national standardization organizations. These organizations exist in every country and may be private or governmental organizations. The first national standardization th organizations were founded in the early decades of the 20 century and were aimed at rationalizing industrial production. Their mode of operation reflects the sense of co operation at the national level and - in the telecommunications and electrotechnical field - at the intemationallevel as well. Now, however, the scene has changed, with companies operating internationally. Standards for products, processes, and services are crucial factors in determining success or failure on a fiercely competitive market, especially when functional compatibility is a prerequisite, as is the case in computer and telecommunications technologies. As a consequence, rather homogeneous needs of participants in standardization have given way to conflicting interests. This prompts a discussion about the traditional role of national standardization organizations. They increasingly depend on their exclusive links to the international standardization organizations ISO and IEC, and, in the case of Europe, the regional organizations CEN and CENELEC. In many cases, formal standardization organizations are not the obvious bodies for developing standards to meet business needs. Is this inevitable or could they improve performance and regain their market share? Henk de Vries answers this question against the background of current developments in standardization at the international, European, and national levels.
