Kenneth R. Lang

*The Life and Death of Stars* Kenneth R.

Lang, 2013-03-25 Explains how stars are born, how they evolve and their ultimate fates, for a broad general audience.

**Living with the Stars** Karel Schrijver, Iris Schrijver, 2015 Living with the Stars tells the fascinating story of what truly makes the human body. The body that is with us all our lives is always changing. We are quite literally not who we were years, weeks, or even days ago: our cells die and are replaced by new ones at an astonishing pace. The entire body continually rebuilds itself, time and again, using the food and water that flow through us as fuel and as construction material. What persists over time is not fixed but merely a pattern in flux. We rebuild using elements captured from our surroundings, and are thereby connected to animals and plants around us, and to the bacteria within us that help digest them, and to geological processes such as continental drift and volcanism here on Earth. We are also intimately linked to the Sun's nuclear furnace and to the solar wind, to collisions with asteroids and to the cycles of the birth of stars and their deaths in cataclysmic supernovae, and ultimately to the beginning of the universe. Our bodies are made of the burned out embers of stars that were released into the galaxy in massive explosions billions of years ago, mixed with atoms that formed only recently as ultrafast rays slammed into Earth's atmosphere. All of that is not just remote history but part of us now: our human body is inseparable from nature all around us and

intertwined with the history of the universe.

**The Life History of a Star** Kelly Easton, 2001  
When Donald Justice wrote in *On a Picture* by Burchfield that art keeps long hours, he might have been describing his own life. Although he early on struggled to find a balance between his life and art, the latter became a way of experiencing his life more deeply. He found meaning in human experience by applying traditional religious language to his artistic vocation. Central to his work was the translation of the language of devotion to a learned American vernacular. Art not only provided him with a wealth of intrinsically worthwhile experiences but also granted rich and nuanced ways of experiencing, understanding, and being in the world. For Donald Justice--recipient of some of poetry's highest laurels, including the Pulitzer Prize, the Bollingen Prize, and the Lannan Literary Award for Poetry--art was a way of life. Because Jerry Harp was Justice's student, his personal knowledge of his subject--combined with his deep understanding of Justice's oeuvre--works to remarkable advantage in *For Us, What Music?* Harp reads with keen intelligence, placing each poem within the precise historical moment it was written and locating it in the context of the literary tradition within which Justice worked. Throughout the text runs the narrative of Justice's life, tying together the poems and informing Harp's interpretation of them. *For Us, What Music?* grants readers a remarkable understanding of one of America's greatest poets.

Beyond the Stars Paolo Saraceno, David

Goodstein, 2012-07-17 What is the origin of the universe? Are we alone in the Universe? Using clear and plain language, the author explores these two interesting scientific-philosophical themes with a broad range of studies, including astronomy, cosmology, chemistry, biology, geology and planet science. The first part discusses the origins of everything, from the Big Bang to humankind. It follows the long course of evolution – from original matter to the formation of more complex structures, from the furthest galaxies to the nearest stars, from planets to organic molecules, from the first and most elementary forms of life through to the reptiles, the dinosaurs and the advent of man. The second part traces the history of the Earth and evaluates the risks of extinction in the future as predicted by scientists. Is the Earth the only habitable planet in the Universe? This question initiates the discussion on the importance of the Earth's position in the solar system and the significance of our geologically alive planet. The final part is dedicated to the search for extraterrestrial beings with identifiable life forms. It also describes attempts for searching, from the past to the near future. This remarkable book provides the best answers we have to the epic questions about us and our place in the universe. Contents:

**The Secret Life of Stars** Lisa Harvey-Smith, 2021-05-04 In *The Secret Life of Stars*, award-winning astronomer Lisa Harvey-Smith takes us on a cosmic journey to meet some of the weirdest, most extreme, and enigmatic stars in the universe. We all know the Sun, the powerhouse of our solar system, but what about Luyten's Flare, the Rosino-Zwicky Object, or Chanal's variable star? For those whose curiosity takes them far beyond Earth's atmosphere, *The Secret Life of Stars* offers a personal and readily understood introduction to some of the Galaxy's most remarkable stars. Written by award-winning astronomer Lisa Harvey-Smith, each chapter explains various different and unusual stars and

their amazing characteristics and attributes, from pulsars, blue stragglers, and white dwarfs, to cannibal stars and explosive supernovae. With beautiful chapter illustrations by Eirian Chapman, this book brings to life the remarkable personalities of these stars, reminding readers what a diverse and unpredictable universe we live in and how fortunate we are to live around a stable star, our Sun.

**Life with a Star** Jiří Weil, Rita Klímová, 1998 Set during the Nazi occupation of Prague, *Life with a Star* records the day-to-day life of Josef Roubicek, an ex-bank clerk, who discovers that the prosaic world he has always inhabited is suddenly off-limits to him because he is a Jew. One of the most powerful works to emerge from the Holocaust; it is a fierce and necessary work of art.--The New York Times.

*Our Place in the Universe - II* Sun Kwok, 2021-10-21 Starting from Newton's times this follow-up to the author's Springer book "*Our Place in the Universe - Understanding Fundamental Astronomy from Ancient Discoveries*" addresses the question of "our place in the Universe" from astronomical, physical, chemical, biological, philosophical and social perspectives. Using the history of astronomy to illustrate the process of discovery, the emphasis is on the description of the process of how we learned and on the exploration of the impacts of discoveries rather than on the presentation of facts. Thus readers are informed of the influence of science on a broad scale. Unlike the traditional way of teaching science, in this book, the author begins

by describing the observations and then discusses various attempts to find answers (including unsuccessful ones). The goal is to help students develop a better appreciation of the scientific process and learn from this process to tackle real-life problems.

*Every Soul a Star* Wendy Mass, 2008-10-01 And as streams of light fan out behind the darkened sun like the wings of a butterfly, I realize that I never saw real beauty until now. At Moon Shadow, an isolated campground, thousands have gathered to catch a glimpse of a rare and extraordinary total eclipse of the sun. It's also where three lives are about to be changed forever: Ally likes the simple things in life--labyrinths, star-gazing, and comet-hunting. Her home, the Moon Shadow campground, is a part of who she is, and she refuses to imagine it any other way. Popular and gorgeous (everybody says so), Bree is a future homecoming queen for sure. Bree wears her beauty like a suit of armor. But what is she trying to hide? Overweight and awkward, Jack is used to spending a lot of time alone. But when opportunity knocks, he finds himself in situations he never would have imagined and making friends in the most unexpected situations. Told from three distinct voices and perspectives, Wendy Mass weaves an intricate and compelling story about strangers coming together, unlikely friendships, and finding one's place in the universe.

**Creating Magic** Lee Cockerell, 2008-10-14 "It's not the magic that makes it work; it's the way we work that makes it magic." The secret for creating "magic" in our careers, our organizations, and our lives is simple: outstanding leadership—the kind that inspires employees, delights customers, and achieves extraordinary business results. No one knows more about this kind of leadership than Lee Cockerell, the man who ran Walt Disney World® Resort operations for over a decade. And in *Creating Magic*, he shares the leadership principles that not only guided his own journey from a poor farm boy in Oklahoma to the head of operations for a multibillion dollar enterprise, but that also soon came to form the cultural bedrock of the world's number one vacation destination. But as Lee demonstrates, great leadership isn't about mastering impossibly complex management theories. We can all become outstanding leaders by following the ten practical, common sense strategies outlined in

this remarkable book. As straightforward as they are profound, these leadership lessons include: Everyone is important. Make your people your brand. Burn the free fuel: appreciation, recognition, and encouragement. Give people a purpose, not just a job. Combining surprising business wisdom with insightful and entertaining stories from Lee's four decades on the front lines of some of the world's best-run companies, *Creating Magic* shows all of us – from small business owners to managers at every level – how to become better leaders by infusing quality, character, courage, enthusiasm, and integrity into our workplace and into our lives.
