The Privatization of Space Exploration Lewis D. Solomon, 2017-09-08

Space was at the center of America's imagination in the 1960s. President John F. Kennedy's visionary statement captured the mood of the day: We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard. The Apollo mission's success in July 1969 made almost anything seem possible, but the Cold War made space flight the province of governmental agencies in the United States. When the Apollo program ended in 1972, space lost its hold on the public interest, as the great achievements wound down. Entrepreneurs are beginning to pick up the slack-looking for safer, more reliable, and more cost effective ways of exploring space. Entrepreneurial activity may make create a renaissance in human

spaceflight. The private sector can energize the quest for space exploration and shape the race for the final frontier. Space entrepreneurs and private sector firms are making significant innovations in space travel. They have plans for future tourism in space and safer shuttles. Solomon details current US and international laws dealing with space use, settlement, and exploration, and offers policy recommendations to facilitate privatization. As private enterprise takes hold, it threatens to change the space landscape forever. Individuals are designing spacecraft, start-up companies are testing prototypes, and reservations are being taken for suborbital space flights. With for-profit enterprises carving out a new realm, it is entirely possible that space will one day be a sea of hotels and/or a repository of resources for big business. It is important that regulations are in place for this eventuality. These new developments have great importance, huge implications, and urgency for everyone.

A City on Mars Kelly Weinersmith, Zach Weinersmith, 2023-11-07 * THE INSTANT NEW YORK TIMES BESTSELLER * Scientific American's #1 Book for 2023 * A New York Times Book Review Editors' Choice * A Times Best Science and Environment Book of 2023 * "Exceptional. . . Forceful, engaging and funny . . . This book will make you happy to live on this planet — a good thing, because you're not leaving anytime soon." —New York Times Book Review From the bestselling authors of *Soonish*, a brilliant and hilarious off-world investigation into space settlement Earth is not well. The promise of starting life anew somewhere far, far away—no climate change, no war, no Twitter—beckons, and settling the stars finally seems within our grasp. Or is it? Critically acclaimed, bestselling authors Kelly and Zach Weinersmith set out to write the essential guide to a glorious future of space settlements, but

after years of research, they aren't so sure it's a good idea. Space technologies and space business are progressing fast, but we lack the knowledge needed to have space kids, build space farms, and create space nations in a way that doesn't spark conflict back home. In a world hurtling toward human expansion into space, *A City on Mars* investigates whether the dream of new worlds won't create nightmares, both for settlers and the people they leave behind. In the process, the Weinersmiths answer every question about space you've ever wondered about, and many you've never considered: Can you make babies in space? Should corporations govern space settlements? What about space war? Are we headed for a housing crisis on the Moon's Peaks of Eternal Light—and what happens if you're left in the Craters of Eternal Darkness? Why do astronauts love taco sauce? Speaking of meals, what's the legal status of space cannibalism? With deep expertise, a winning sense of humor, and art from the beloved creator of *Saturday Morning Breakfast Cereal*, the Weinersmiths investigate perhaps the biggest questions humanity will ever ask itself—whether and how to become multiplanetary. Get in, we're going to Mars.

Non-Stop Brian W. Aldiss, 2020-10-13 A “brilliant . . . classic of the field” generation ship adventure from the Golden Age of Science Fiction by the author of the *Helliconia* Trilogy (Encyclopedia of Science Fiction). *Non-Stop* is Grand Master of Science Fiction and Hugo and Nebula Award–winning author Brian W. Aldiss's debut novel. Written in response to Robert Heinlein's *Orphans of the Sky* and published in the late 1950s, it is set in a primitive world, home to tribes of inhabitants who endure their harsh and stunted lives in a maze of corridors. Though legends exist that they're actually on a ship traveling through the universe, no one really believes it. But that conviction doesn't stop a group of people from embarking on a

mission to find the rumored “Forwards” section and its control room. Through a tangled, hydroponic jungle, they’ll encounter telepathic animals, giants, outcasts, and mutants in an epic race to uncover the truth—and survive . . . “A breakneck ride filled with some truly disturbing and chaotic imagery . . . Aldiss’ world is visceral and powerful.” —Science Fiction and Other Suspect Ruminations “Worth reading, and quite a significant contribution to the long SF history of generation ship novels.” —SF Site Praise for Brian W. Aldiss “A major figure in world SF . . . Whatever else Aldiss may be, predictable he is not.” —The Guardian “One of the most influential—and one of the best—SF writers Britain has ever produced.” —Iain M. Banks, award-winning author of the Culture series “One of the most important SF writers of the 20th century.” —Publishers Weekly

Responding to Crisis Dan Pyle Millar, Robert L. Heath, 2003-12-08 In recent years, researchers and practitioners have explored the nature, theory, and best practices that are required for effective and ethical crisis preparation and response. The consequences of being unprepared to respond quickly, appropriately, and ethically to a crisis are dramatic and well documented. For this reason, crisis consulting and the development of crisis response plans and protocols have become more than a cottage industry. Taking a rhetorical view of crisis events and utterances, this book is devoted to adding new insights to the discussion, and to describing a rhetorical approach to crisis communication. To help set the tone for that description, the opening chapter reviews a rhetorical perspective on organizational crisis. As such it raises questions and provokes issues more than it addresses and answers them definitively. The other chapters can be viewed as a series of experts participating in a panel discussion. The challenge to each of the authors is to add depth

and breadth of understanding to the analysis of the rhetorical implications of a crisis, as well as to the strategies that can be used ethically and responsibly. Central to this analysis is the theoretic perspective that crisis response requires rhetorically tailored statements that satisfactorily address the narratives surrounding the crisis which are used by interested parties to define and judge it. This volume will be of value to scholars and students interested in crisis communication, and is certain to influence future work and research on responding to crises.

The Starship and the Canoe Kenneth Brower, 2020-02-18 “The Starship and the Canoe is neither a wilderness survival manual nor a book of blueprints. It is another of those rare books impossible to define: the kind that seeks you in time. And you will know it, live it, and consult it thereafter simply by name.” -- Chicago Sun-Times “Brower’s superbly written book clutches at one’s imagination.” --Publishers Weekly “In the tradition of Carl Sagan and John McPhee, a bracing cerebral voyage past intergalactic hoopla and backwoods retreats.” --Kirkus Reviews Originally published in 1978, *The Starship and the Canoe* is the remarkable story of a father and son: Freeman Dyson is a world-renowned astrophysicist who dreams of exploring the heavens and has designed a spaceship to take him there. His son George, a brilliant high school dropout, lives in a treehouse and is designing a giant kayak to explore the icy coastal wilderness of the Pacific Northwest and Alaska. Author Kenneth Brower describes with stunning impact their lives and their visions of the world. It is a timeless tale framed by modern science, adventure, family, and the natural world.

Pink Knight C J Harvey,2019 Some ten thousand years ago Earth was visited by beings from another planet in the Barnard's Star system. The Babylonians recorded that beings they called the 'Oannes' were amphibious creatures who came to Earth for the welfare of the human race. The historian Hellandus describes them as having fishlike features but the head, feet and arms of a man. They instructed humans in everything a civilized nation should know. They built a city beneath Antarctica near the Davis Sea and have lived there peacefully and secretly ever since. But now a rogue Dwarf Star called Zarama threatens the very existence of both Earth and the home planet Nazmos. Their mythology predicts that a being from another planet will avert disaster. Enter Ashley Bonner into this scenario. He has been granted 'special

gifts' and the Oannes think he may be the predicted one. Can Ashley really prevail against a star a third more massive than the Sun? This is the story of Ashley's development to manhood from age four to seventy and his ultimate sacrifice to save both worlds.

A Tribble's Guide to Space Alan C. Tribble, 2002 Space--the final frontier. It's as little as fifty miles away, and yet it is considered one of the most dangerous and remote of places. Popular television shows such as Star Trek and movies such as Apollo 13 and October Sky have fired the imaginations of would-be explorers. Alan Tribble has worked on the design and development of dozens of spacecraft, including the Space Shuttle and the International Space Station. A Tribble's Guide to Space is a how-to book that is firmly grounded in the realities of current state-of-the-art space engineering while tapping into the power of imagination that drives us to explore. Alan Tribble offers a delightful guide to the nuts and bolts of space exploration, from how to get there to how to phone home and how to survive the harsh environment of space. Using examples from famous space missions, both factual and fictional, Tribble tackles fascinating real-world problems encountered in space exploration. Why do submarine hatches open inward and spacecraft hatches open outward? What do curveballs and satellites have in common? Why did Scotty, the chief engineer of the fictional USS Enterprise, always need more power? Why did the fire that destroyed Apollo I on the launch pad burn so furiously that no one could react fast enough to save the lives of the

crew? In answering these questions, Tribble examines getting to space, from the physics of motion to the practical implications of Einstein's theory of relativity. He explores the basics of spaceships and starships, from power usage to navigation--all from the viewpoint of a spacecraft designer. This book describes rocket science and more in a manner that captures the common excitement shared by anyone with an interest in space exploration. Armchair astronauts, engineers who work in a space company and anyone who has looked up at the sky and wondered how we will get there will find reading this book a wonderful and enlightening experience.
