Information Hiding: Steganography and Watermarking-Attacks and Countermeasures Neil F.

Johnson,Zoran Duric,Sushil Jajodia,2012-12-06 *Information Hiding: Steganography and Watermarking - Attacks and Countermeasures* deals with information hiding. With the proliferation of multimedia on the Internet, information hiding addresses two areas of concern: privacy of information from surveillance (steganography) and protection of intellectual property (digital watermarking). Steganography (literally, covered writing) explores methods to hide the existence of hidden messages. These methods include invisible ink, microdot, digital signature, covert channel, and spread spectrum communication. Digital watermarks represent a commercial application of steganography. Watermarks can be used to track the copyright and ownership of electronic media. In this volume, the authors focus on techniques for hiding information in digital media. They analyze the hiding techniques to uncover their limitations. These limitations are employed to devise attacks against hidden information. The goal of these attacks is to expose the existence of a secret message or render a digital watermark unusable. In assessing these attacks, countermeasures are developed to assist in protecting digital watermarking systems. Understanding the limitations of the current methods will lead us to build more robust methods that can survive various manipulation and attacks. The more information that is placed in the public's reach on the Internet, the more owners of such information need to protect themselves from theft and false representation. Systems to analyze techniques for uncovering hidden information and recover seemingly destroyed information will be useful to law enforcement authorities in computer forensics and digital traffic analysis. *Information Hiding: Steganography and Watermarking - Attacks and Countermeasures* presents the authors' research contributions in three fundamental areas with respect to image-based steganography and watermarking: analysis of data hiding techniques, attacks against hidden information, and countermeasures to attacks against digital watermarks. *Information Hiding: Steganography and Watermarking – Attacks and Countermeasures* is suitable for a secondary text in a graduate level course, and as a reference for researchers and practitioners in industry.

Stealth Peter Westwick,2020 The story behind the technology that revolutionized both aeronautics, and the course of history.On a moonless night in January 1991, a dozen airplanes appeared in the skies over Baghdad. Or, rather, didn't appear. They arrived in the dark, their black outlines cloaking them from sight. More importantly, their odd, angular shapes, which made them look like flying origami, rendered them undetectable to Iraq's formidable air defenses. Stealth technology, developed during the decades before Desert Storm, had arrived. To American planners and strategists at the outset of the Cold War, this seemingly ultimate way to gain ascendance over the USSR was only a question. What if the United States could defend its airspace while at the same time send a plane through Soviet skies undetected? A craft with such capacity would have to be essentially invisible to radar - an apparently miraculous feat of physics and engineering. In *Stealth*, Peter Westwick unveils the process by which the impossible was achieved. At heart, *Stealth* is a tale of two aerospace companies, Lockheed and Northrop, and their fierce competition - with each other and with themselves - to obtain what was estimated one of the largest procurement contracts in history. Westwick's book fully explores the individual and collective ingenuity and determination required to make these planes and in the process provides a fresh view of the period leading up to the end of the Soviet Union. Taking into account the role of technology, as well as the art and science of physics and engineering, Westwick offers an engaging narrative, one that immerses readers in the race to produce a weapon that some thought might save the world, and which certainly changed it.

Sonallah Ibrahim Starkey Paul Starkey,2016-06-02 This volume is designed as an introduction to the contemporary Egyptian author Sonallah Ibrahim, one of the most important Arabic novelists of the modern era, with an unrivalled reputation for independence and integrity among contemporary Egyptian writers. The first study in any language devoted exclusively to Sonallah Ibrahim, the volume discusses each of the author's novels individually, beginning with the seminal *Tilka al-ra'iha* [That Smell] (1966) and ending with *al-Jalid* [Ice] (2011). Each work is discussed individually in its literary, social, historical and political context. The volume traces the evolution of Sonallah Ibrahim's work in terms both of their themes and of their literary technique, and concludes with an attempt at an overall evaluation of the author's contribution to the contemporary Egyptian novel. Paul Starkey's account shows how innovative and stylistically rich the Arabic novel has become over a period of some fifty years, beyond the better-known work of writers such as Naguib Mahfouz and Yusuf Idris. As such, the volume will serve as an introduction not only to the individual author but also to the development of Egyptian (and, more generally, Arabic) literature over the last half century.

International Economic Law Colin Picker,Isabella D Bunn,Douglas Arner,2008-04-08 'Bretton Woods' has become shorthand for the post-war international financial and economic framework. Mindful of the historic 1944 conference and its legacy for the discipline of international economic law, the American Society of International Law's International Economic Law Group (IELG) chose Bretton Woods as the venue for a landmark scholarly meeting. In November of 2006, a diverse group of academics and practitioners gathered to reflect on the past, present and future of international economic law. They sought to survey and advance three particular areas of endeavour: research and scholarship, teaching, and practice/service. This book represents an edited collection of some of the exceptional papers presented at the conference including contributions from Andreas Lowenfeld, Joel Trachtman, Amelia Porges and Andrew Lang. The volume is organised into three parts, each covering one of the three pillars in the discipline of international economic law: research and scholarship; teaching; and practice/service. It begins with an assessment of the state and future of research in the field, including chapters on questions such as: what is international economic law? Is it a branch of international law or of economic law? How do fields outside of law, such as economics and international relations, relate to international economic law? How do research methodologies influence policy outcomes? The second part examines the state and future of teaching in the subject. Chapters cover topics such as: how and where is international economic law taught? Is the training provided in the law schools suitable for future academics, government officials, or practitioners? How might regional shortcomings in academic resources be addressed? The final part of the book focuses on the state and future of international economic law practice in the Bretton Woods era, including institutional reform. The contributors consider issues such as: what is the nature of international economic law practice? What are the needs of practitioners in government, private practice, international and non-governmental organisations? Finally, how have the Bretton Woods institutions adapted to these and other challenges-and how might they better respond in the future? *International Economic Law: The State and Future of the Discipline* will be of interest to lawyers, economists and other professionals throughout the world-whether in the private, public, academic or non-governmental sectors-seeking both fresh insights and expert

assessments in this expanding field. Indeed, the book itself promises to play a role in the next phase of the development of international economic law.

Hendrik de Man and Social Democracy Tommaso Milani,2020-06-15 The book investigates the intellectual and political trajectory of the Belgian theorist Hendrik de Man (1885-1953) by examining the impact that his works and activism had on Western European social democracy between the two world wars. Based on multinational archival research, the book highlights how the idea of economic planning became part of a wider effort to address an ideological crisis within the socialist movement and revitalise the latter amidst the Great Depression. A heavily controversial figure also because of his subsequent involvement in Belgian wartime collaboration, de Man played a pivotal role in challenging traditional Marxist assumptions about the role of the state under capitalism and in promoting transnational exchanges between unorthodox social democrats across Europe. Starting from de Man's experience in World War I, the book analyses his departure from Marxism, his elaboration of an alternative social democratic paradigm, his entry in Belgian politics as well as the reception of his thought in France and Britain.
