The Daily Stoic Ryan Holiday, Stephen Hanselman, 2016-10-18 The beloved classic daily devotional of Stoic meditations—the only authorized print edition in the US and complete with a ribbon marker—with more than two million copies sold! Why have history's greatest minds—from George Washington to Frederick the Great to Ralph Waldo Emerson, along with today's top performers from Super Bowl-winning football coaches to CEOs and celebrities—embraced the wisdom of the ancient Stoics? Because they realize that the most valuable wisdom is timeless and that philosophy is for living a better life, not a classroom exercise. The Daily Stoic offers 366 days of Stoic insights and exercises, featuring all-new translations from the Emperor Marcus Aurelius, the playwright Seneca, or slave-turned-philosopher Epictetus, as well as lesser-known luminaries like Zeno, Cleanthes, and Musonius Rufus. Every day of the year you'll find one of their pithy, powerful quotations, as well as historical anecdotes, provocative commentary, and a helpful glossary of Greek terms. By following these teachings over the course of a year (and, indeed, for years to come) you'll find the serenity, self-knowledge, and resilience you need to live well.

On the Tranquility of the Mind Seneca, 2017-06-22 Seneca the Younger (c. 4 BC - AD 65), fully Lucius Annaeus Seneca and also known simply as Seneca, was a Roman Stoic philosopher, statesman, dramatist, and—in one work—humorist of the Silver Age of Latin literature. As a tragedian, he is best-known for his *Medea* and *Thyestes*. He was a tutor and later advisor to emperor Nero. He was forced to take his own life for alleged complicity in the Pisonian conspiracy to assassinate Nero. However, some sources state that he may have been innocent. His father was Seneca the Elder, his elder brother was Lucius Junius Gallio Annaeanus, and his nephew was the poet Lucan. In this work, the dialogue takes up the causes of man's restlessness and boredom, then moves on to Seneca's practical rules for happiness and peace of mind, rules based upon reason and virtue. The work is a timeless classic on the ultimate pursuit of happiness.

Physiology and Behavior Therapy James G. Hollandsworth Jr., 2012-12-06 Despite the widespread use of psychophysiological concepts and methods in behavior therapy, there is no text devoted specifically to the subject. The publication of this book is necessary and timely, and should promote a better appreciation of the physiological roots of behavior therapy. The important connections between physiology and behavior therapy receive insufficient recognition nowadays, despite the fact that historically one of the two main streams of behavior therapy grew out of a physiological basis. Wolpe's early work was closely connected to physiology, and in contemporary behavior therapy, Lang's critical contribution is firmly based in psychophysiology. The physiological component is prominent in Lang's highly productive three-systems analysis of emotion and in its application to psychological disorders. In addition, there are philosophical reasons for maintaining the close connection between behavior therapy and physiology. The existence of these connections, and their justification, can raise few objections, and it is therefore curious that a book on this significant subject has not appeared earlier. The importance of physiology for behavior therapy can be illustrated by considering the nature of a behavior therapy deprived of its physiological connections. It would survive, certainly, but as a rather scrawny, uninteresting orphan among many clamorous competitors.

Fossil Birds from the Oligocene Jebel Qatrani Formation, Fayum Province, Egypt D. Tab Rasmussen, Storrs L. Olson, Elwyn L. Simons, 1987 Fossils from fluvial deposits of early Oligocene age in Egypt document the earliest known diverse avifauna from Africa, comprising at least 13 families and 18 species. Included are the oldest fossil records of the Musophagidae (turacos), Pandionidae (ospreys), Jacanidae (jacanas), and Balaenicipitidae (shoebilled storks). Other families represented are the Accipitridae (hawks and eagles), Rallidae (rails), Gruidae (cranes), Phoenicopteridae (flamingos), Ardeidae (herons), Ciconiidae (storks), and Phalacrocoracidae (cormorants). A highly distinctive rostrum is described as a new family, Xenerodiopidae, probably most closely related to herons. A humerus lacking the distal end is tentatively referred to the same family. Two new genera and three species

of large to very large jacanas are described from the distal ends of tarsometatarsi. This Oligocene avifauna resembles that of modern tropical African assemblages. The habitat preferences of the constituent species of birds indicate a tropical, swampy, vegetation-choked, fresh-water environment at the time of deposition.
