The strategic arsenals and military programs of the two traditional superpowers and the steady buildup of the nuclear and missile capabilities of China, the newly emergent superpower of the twenty-first century, give global significance to the Great Triangle they form.

Singh, Bhadrani Thoradeniya, 2016-08-29 This book provides a unique synthesis of concepts and tools to examine natural resource, socio-economic, legal, policy and institutional issues that are important for managing urban growth into the future. The book will particularly help the reader to understand the current issues and challenges and develop strategies and practices to cope with future pressures of urbanisation and peri-urban land, water and energy use challenges. In particular, the book will help the reader to discover underlying principles for the planning of future cities and peri-urban regions in relation to: (i) Balanced urban development policies and institutions for future cities; (ii) Understanding the effects of land use change, population increase, and water demand on the liveability of cities; (iii) Long-term planning needs and transdisciplinary approaches to ensure the secured future for generations ahead; and (iv) Strategies to adapt the cities and land, water and energy uses for viable and liveable cities. There are growing concerns about water, food security and sustainability with increased urbanisation worldwide. Museums and Public Value Carol A. Scott, 2016-04-22 Public Value speaks to our time - to the role that museums

can play in creating civil societies, to the challenges involved in using limited assets strategically, to the demand for results that make a difference and to the imperative that we build the kind of engagement that sustains our futures. This book assists museum leaders to implement a Public Value approach in their management, planning, programming and relationship building. The benefits are long term public engagement and support, which can be used to demonstrate that valuable returns result from public investment in museums. A range of authors from around the world unpack the concept of Public Value and examine its implications for museums. They situate Public Value within current management theory and practice, offer tools for implementation, highlight examples of successful practice and examine the evidence of Public Value that governments seek to inform policy and funding decisions. The book will be required reading for senior professionals in museums, as well as museum and heritage studies students.

Policing Sport Mega-Events Dennis Pauschinger,2024-01-16 Security has become one of the most important aspects of sport mega-event organisation. This book explores how Rio de Janeiro was imagined and transformed into a security fortress when the 2014 Men's World Cup and the 2016 Olympics came to the city and how the fortress was nonetheless permeable and porous. Dennis Pauschinger experienced exceptional backstage access at high level in the Brazilian mega-event security architecture as well as at street level with the local public security sphere. His ethnographic account takes us from the hidden world of surveillance and control centres, to the security perimeters around stadiums, and to the mundane routine of police officers during day and night shifts at local police stations or at the Special Forces' headquarters. This book shows how police officers' emotions and Special Forces' war narratives impact the static and technology-based security models at mega-events and how traditional patterns of police work, along lines of class and racial inequalities, still prevail and shape the city's public security. The book argues against the common narrative of the positive impacts of mega-event security legacies upon host cities by advancing towards a general understanding of how security governance is carried out in places where the use of digital security technologies co-exists with overly lethal and repressive forms of policing.

Mega Urban Regions of Southeast Asia Ira M. Robinson,2011-11-01 A distinguishing feature of recent urbanization in the ASEAN countries of Thailand, Malaysia, the Philippines, Singapore, and Indonesia is the outward extension of their mega-cities (Bangkok, Jakarta, Manila, Singapore, and Kuala Lumpur) beyond the metropolitan borders, resulting in the establishment of new towns, industrial estates, and housing projects in previously rural areas. This process has both positive and negative effects. On one side, household incomes and employment opportunities are increasing, but on the other, the growth often causes serious problems in terms of environmental deterioration, conflicting land uses, and inadequate housing and service provisions. *Mega Urban Regions of Southeast Asia* is the first comprehensive work on the subject of ASEAN mega-urban regions. The contributors review T.G. McGee's original idea of desakota zones, and offer arguments both for and against this concept, making a significant contribution to our understanding of the true face of ASEAN cities. The book brings together authors from around the world and will be of interest to a wide audience, including demographers, urban planners, geographers, sociologists, economists, civil servants and development consultants.

Socioeconomic Evaluation of Megaprojects Markku Lehtonen,Pierre-Benoît Joly,Luis Aparicio,2016-11-22 The governance and evaluation of 'megaprojects' - that is, large-scale, complex, high-stakes infrastructure projects usually commissioned by governments and delivered through partnerships between public and private organisations - is receiving increased attention. However, megaproject evaluation has hitherto largely adopted a linear-rationalist perspective to explain the frequent failure of such projects to meet the 'iron triangle' of performance criteria: delivering on time, within budget, and according to specifications. This approach recommends greater control and accountability to remedy megaproject 'pathologies'. Drawing on empirical examples mainly from the transport sector and radioactive waste disposal, this book offers new perspectives to megaproject evaluation. Comprising contributions from leading experts in project evaluation and appraisal, this collection opens up new avenues by suggesting two ways of improving megaproject evaluation: 1) approaches that go beyond the dominant linearrationalist notion of policy processes, and emphasise instead the objective of opening up appraisal processes in order to enhance learning and reflexivity; and 2) approaches that extend evaluative criteria beyond the 'iron triangle', to cover the various socioeconomic impacts and preconditions for project success. This volume will be of great relevance to scholars and practitioners with an interest in megaprojects, energy and climate policy, radioactive waste management, urban design, and project planning and management.

Megaregions Catherine Ross,2012-06-22 The concept of "the city" -as well as "the state" and "the nation state" -is passé, agree contributors to this insightful book. The new scale for considering economic strength and growth

opportunities is “the megaregion,” a network of metropolitan centers and their surrounding areas that are spatially and functionally linked through environmental, economic, and infrastructure interactions. Recently a great deal of attention has been focused on the emergence of the European Union and on European spatial planning, which has boosted the region’s competitiveness. Megaregions applies these emerging concepts in an American context. It addresses critical questions for our future: What are the spatial implications of local, regional, national, and global trends within the context of sustainability, economic competitiveness, and social equity? How can we address housing, transportation, and infrastructure needs in growing megaregions? How can we develop and implement the policy changes necessary to make viable, livable megaregions? By the year 2050, megaregions will contain two-thirds of the U.S. population. Given the projected growth of the U.S. population and the accompanying geographic changes, this forward-looking book argues that U.S. planners and policymakers must examine and implement the megaregion as a new and appropriate framework. Contributors, all of whom are leaders in their academic and professional specialties, address the most critical issues confronting the U.S. over the next fifty years. At the same time, they examine ways in which the idea of megaregions might help address our concerns about equity, the economy, and the environment. Together, these essays define the theoretical, analytical, and operational underpinnings of a new structure that could respond to the anticipated upheavals in U.S. population and living patterns.
