  Machine Learning for Data Streams Albert

Bifet,Ricard Gavalda,Geoffrey Holmes,Bernhard Pfahringer,2018-03-16 A hands-on approach to tasks and techniques in data stream mining and real-time analytics, with examples in MOA, a popular freely available open-source software framework. Today many information sources—including sensor networks, financial markets, social networks, and healthcare monitoring—are so-called data streams, arriving sequentially and at high speed. Analysis must take place in real time, with partial data and without the capacity to store the entire data set. This book presents algorithms and techniques used in data stream mining and real-time analytics. Taking a hands-on approach, the book demonstrates the techniques using MOA (Massive Online Analysis), a popular, freely available open-source software framework, allowing readers to try out the techniques after reading the explanations. The book first offers a brief introduction to the topic, covering big data mining, basic methodologies for mining data streams, and a simple example of MOA. More detailed discussions follow, with chapters on sketching techniques, change, classification, ensemble methods, regression, clustering, and frequent pattern mining. Most of these chapters include exercises, an MOA-based lab session, or both. Finally, the book discusses the MOA software, covering the MOA graphical user interface, the command line, use of its API, and the development of new methods within MOA. The book will be an essential reference for readers who want to use data stream mining as a tool, researchers in innovation or data stream mining,

and programmers who want to create new algorithms for MOA.

The Content, Impact, and Regulation of Streaming Video Eli Noam,2021-01-29 Along with its interrelated companion volume, The Technology, Business, and Economics of Streaming Video, this book examines the next generation of TV—online video. It reviews the elements that lead to online platforms and video clouds and analyzes the software and hardware elements of content creation and interaction, and how these elements lead to different styles of video content.

Streaming Sounds Michael James Walsh,2024-03-29 In a time when music streaming has become the dominant mode of consuming music recordings, this book interrogates how users go about listening to music in their everyday lives in a context where streaming services are focused on not only the circulation of music for users but also the circulation of user data and attention. Drawing insights directly from interviews with users, music streaming is explained as never merely a neutral technology but rather one that seeks to actively shape user engagement. Users respond to streaming platforms with some relishing these aspects that provide music to be drawn into daily activities while others show signs of resistance. It is this tension that this book explores. This unique and accessible study will be ideal reading for both scholars and students of popular music studies, communication studies, sociology, media and cultural studies.

Streaming and Copyright Law Lasantha Ariyarathna,2022-09-05 This book examines the

challenges posed to Australian copyright law by
streaming, from the end-user perspective. It
compares the Australian position with the European
Union and United States to draw lessons from them,
regarding how they have dealt with streaming and
copyright. By critically examining the
technological functionality of streaming and the
failure of copyright enforcement against the
masses, it argues for strengthening end-user
rights. The rising popularity of streaming has
resulted in a revolutionary change to how digital
content, such as sound recordings, cinematographic
films, and radio and television broadcasts, is
used on the internet. Superseding the conventional
method of downloading, using streaming to access
digital content has challenged copyright law,
because it is not clear whether end-user acts of
streaming constitute copyright infringement. These
prevailing grey areas between copyright and
streaming often make end-users feel doubtful about
accessing digital content through streaming. It is
uncertain whether exercising the right of
reproduction is appropriately suited for
streaming, given the ambiguities of "embodiment"
and scope of "substantial part". Conversely, the
fair dealing defence in Australia cannot be used
aptly to defend end-users' acts of streaming
digital content, because end-users who use
streaming to access digital content can rarely
rely on the defence of fair dealing for the
purposes of criticism or review, news reporting,
parody or satire, or research or study. When
considering a temporary copy exception, end-users
are at risk of being held liable for infringement

when using streaming to access a website that contains infringing digital content, even if they lack any knowledge about the content's infringing nature. Moreover, the grey areas in circumventing geo-blocking have made end-users hesitant to access websites through streaming because it is not clear whether technological protection measures apply to geo-blocking. End-users have a severe lack of knowledge about whether they can use circumvention methods, such as virtual private networks, to access streaming websites without being held liable for copyright infringement. Despite the intricacies between copyright and access to digital content, the recently implemented website-blocking laws have emboldened copyright owners while suppressing end-users' access to digital content. This is because the principles of proportionality and public interest have been given less attention when determining website-blocking injunctions.

  Streaming, Sharing, Stealing Michael D.
Smith,Rahul Telang,2016-08-05 How big data is
transforming the creative industries, and how
those industries can use lessons from Netflix,
Amazon, and Apple to fight back. "[The authors
explain] gently yet firmly exactly how the
internet threatens established ways and what can
and cannot be done about it. Their book should be
required for anyone who wishes to believe that
nothing much has changed." —The Wall Street
Journal "Packed with examples, from the nimble-
footed who reacted quickly to adapt their
businesses, to laggards who lost empires."
—Financial Times Traditional network television
programming has always followed the same script:
executives approve a pilot, order a trial number
of episodes, and broadcast them, expecting viewers
to watch a given show on their television sets at
the same time every week. But then came Netflix's
House of Cards. Netflix gauged the show's
potential from data it had gathered about
subscribers' preferences, ordered two seasons
without seeing a pilot, and uploaded the first
thirteen episodes all at once for viewers to watch
whenever they wanted on the devices of their
choice. In this book, Michael Smith and Rahul
Telang, experts on entertainment analytics, show
how the success of House of Cards upended the film

and TV industries—and how companies like Amazon and Apple are changing the rules in other entertainment industries, notably publishing and music. We're living through a period of unprecedented technological disruption in the entertainment industries. Just about everything is affected: pricing, production, distribution, piracy. Smith and Telang discuss niche products and the long tail, product differentiation, price discrimination, and incentives for users not to steal content. To survive and succeed, businesses have to adapt rapidly and creatively. Smith and Telang explain how. How can companies discover who their customers are, what they want, and how much they are willing to pay for it? Data. The entertainment industries, must learn to play a little "moneyball." The bottom line: follow the data.

Streaming (RLE Edu L Sociology of Education) Brian Jackson,2012-05-04 In this volume a streamed school is studied in detail and parents' responses are recorded. Eleven plus is (and has been) under criticism, but many children are selected by a 'seven plus' because they are streamed into A, B or C classes. Few children escape the label once it is pinned on them — less than six in one hundred change their stream. The study shows that on a national sample the date on which a child is born — irrespective of his ability — affects his or her stream at the age of 7 and his results at eleven plus. Finally ten streamed schools are compared, academically and socially, with ten unstreamed schools. In the final chapters the author makes practical proposals by which primary

schools could recognise and increase the flow of gifted children.
