The Economics of Symbolic Exchange Alexander

Dolgin, 2008-09-17 Alexander Dolgin's Economics of Symbolic Exchange is in reality not one but three books, and although these semantic layers are interlinked, the reader will need to choose between the different vectors and modalities. One clearly evident dimension is research. Certain authors introduce quite new intellectual approaches into scientific debate. This requires a special

frame of mind and a searching curiosity about social reality. Carl Gustav Jung identified a phenomenon which he called systematic blindness: when a science reaches a stage of maturity and equilibrium, it categorically refuses, from a sense of self-preservation, to note certain facts and phenomena which it finds inconvenient. In Alexander Dugin's book whole complexes of such "non-canonical" material are to be found. Here are just a few examples: the exchange networks, through which digital works of art are spread through the Internet; bargain sales of fashionable clothing; the paradox of equal pricing of cultural goods of varying quality; and a discussion of whether patronage or business has the more productive influence on creativity. Obviously, not all the issues Volgin raises are totally new, but brought together and examined within an elegant logical framework of informational economics, they pose a challenge to scientific thinking. Such challenges are by no means immediately or, in some cases, ever acclaimed by the scientific establishment. J. K. Galbraith, for example, a great American economist, whose works are read throughout the world, who introduced a whole range of crucially important concepts, the director of John F.

SAGE Internet Research Methods Jason Hughes, 2012-06-25

Historically, social researchers have shown a willingness to exploit new technologies to enhance, facilitate and support their various activities. However, arguably no other technological development has influenced the landscape of social research as rapidly and fundamentally as the Internet. This collection avoids both uncritical embrace and wholesale dismissal by considering some of the key literature in the field of Internet research methods. Volume One: Core Issues, Debates and Controversies in Internet Research introduces themes and issues that run across all four volumes such as: epistemology, ontology and methodology in the online world; access, social divisions and the 'digital divide'; and the ethics of online research. Volume Two: Taking Research Online - Internet Survey and Sampling addresses the range of resources, digital archives and Internet-based data sources that exist online from relatively straightforward and practical guides to such material through to more polemical pieces which consider problems relating to the use, access and analysis of online data and resources. Volume Three: Taking Research Online - Qualitative Approaches considers the broad range of approaches to conducting researching via or 'in' the Internet. The focus is on conventional methods that have been 'taken online', and which in doing so, have become transformed in scope and character. Volume Four: Research 'On' and 'In' the Internet - Investigating the Online World follows logically from that which precedes it in exploring how social research has been 'taken online', not simply

through the deployment of existing methods and techniques via the Internet, but in researchers' increasing recognition and investigation of the online world as a sphere of human interaction - a socio-cultural arena to be explored 'from the desktop' as it were.
