*Teaching English Reading in the Chinese-Speaking World* Clay Williams,2016-04-07 This book investigates inherent, structural differences in the Chinese and English writing systems which predispose learners from childhood to develop specific literacy-learning strategies, which can impair later efforts at learning foreign language literacy if the foreign language script varies significantly from the native language script. It compares educational practices and philosophies in Chinese and English-speaking classrooms, and examines the psychological underpinnings of these literacy learning strategies. This book presents psychometric testing of adult reading strategy defaults and examines case study data, revealing that Chinese students are susceptible to misapplying Chinese character-level processing strategies to English word identification tasks, which decreases reading efficiency, and ultimately can lead to learning failure. Finally, a new educational framework is proposed for teaching beginning language-specific word identification and literacy-learning skills to learners whose first language script varies significantly from that of the target language.

Homonymous Visual Field Defects Karolína Skorkovská, 2017-04-30 This book provides a concise, up-to-date overview on homonymous visual field defects, and especially homonymous hemianopia. All aspects of the subject are covered, from anatomy and pathophysiology to diagnosis and management. Emphasis is placed on practical issues and major advances in ophthalmology, neurology, imaging techniques, and psychology. Rehabilitation strategies are described, and methods supporting compensation strategies are recommended. A separate chapter considers driving with homonymous hemianopia, which represents one of the critical issues in traffic ophthalmology. This book will be of particular value to ophthalmologists, neurologists, neurosurgeons, and neuroscientists. It will be an invaluable asset in diagnostic and treatment decision making in patients with homonymous visual field defects, which are the most frequent type of visual field deficit after acquired unilateral postchiasmal brain damage.

*Difficult Decisions in Thoracic Surgery* Mark K. Ferguson, 2014-06-16 The complexity of decision making in thoracic surgery is growing exponentially. As new technology is introduced, physicians from nonsurgical specialties offer alternative and competing therapies for what was once the exclusive province of the thoracic surgeon. In addition, there is increasing knowledge regarding the efficacy of traditional thoracic surgical therapies. How to select among these varied and complex approaches is becoming increasingly difficult. The first two editions of this book have found wide acceptance among practicing surgeons, trainees, and educators. Chapters from them are regularly cited by the Thoracic Surgery Directors Association as valuable resources for their weekly curriculum exercises. As in the first two editions, chapters adhere to a specific format (updated for the third edition). This approach provides uniformity to the presentations, making it possible to identify useful material at a glance.
