Every Picture Hides a Story William Cane,Anna Gabrielle,2022-11-15 Each year 11 million people trek to the Louvre to gawk at the Mona Lisa. Many visitors clutch guide books in hand describing the painting. For some, it's the experience of a lifetime, one they'll talk about with friends and family for decades. Yet some modern researchers say that the vast majority of people will never recognize the hidden messages in this painting. That's because those hidden messages are subliminal. Buried below the threshold of conscious awareness, Da Vinci used techniques people never notice. Not only don't people know what they're seeing, they would be shocked to find out. A surprisingly large number of famous paintings fall into the same category. That is, they employ subliminal techniques to enhance the effectiveness of the work or to encode messages within portraits and landscapes. No book, however, has ever attempted to provide an overview of the technical sophistication and arcane methods that artists worldwide have used to conceal secret meaning in their work. Every Picture Hides a Story is the first book to expose the subliminal content in the world's greatest paintings. Titillating, subversive, and building on the groundbreaking work of pioneers of art criticism, this book will enable readers to view art masterpieces with greater understanding. And their enjoyment of these works will be exponentially enhanced. This full-color book contains 86 images of the paintings and their details.

Subliminal Leonard Mlodinow, 2013-02-12 NATIONAL BESTSELLER • From the bestselling author of *The Drunkard's Walk*, a startling, eye-opening examination of how the unconscious mind shapes our experience of the world. “Mlodinow plunges into the realm of the unconscious mind accompanied by the latest scientific research ... [with] plenty of his trademark humor.” —Los Angeles Times Over the past two decades of neurological research, it has become increasingly clear that the way we experience the world—our perception, behavior, memory, and social judgment—is largely driven by the mind's subliminal processes and not by the conscious ones, as we have long believed. In *Subliminal*, Leonard Mlodinow employs his signature concise, accessible explanations of the most obscure scientific subjects to unravel the complexities of the subliminal mind. In the process he shows the many ways it influences how we misperceive our relationships with family, friends, and business associates; how we misunderstand the reasons for our investment decisions; and how we misremember important events—along the way, changing our view of ourselves and the world around us.

Cortical Visual Impairment Christine Roman-Lantzy, 2007 The current leading cause of visual impairment among children is not a disease or condition of the eyes, but cortical visual impairment (CVI)-also known as cerebral visual impairment-in which visual dysfunction is caused by damage or injury to the brain. The definition, nature, and treatment of CVI are the focus of great concern and widespread debate, and this complex condition poses challenges to professionals and families seeking to support the growth and development of visually impaired children. On the basis of more than 30 years' experience in working with hundreds of children of all ages with CVI, Christine Roman-Lantzy has developed a set of unique assessment tools and systematic, targeted principles whose use has helped children learn to use their vision more effectively. This one-of-a-kind resource provides readers with both a conceptual framework with which to understand working with CVI and concrete strategies to apply directly in their work.
