The Essential Guide to Flash Games Jeff Fulton, Steve

Fulton, 2010-04-28 The Essential Guide to Flash Games is a unique tool for Flash game developers. Rather than focusing on a bunch of low-level how-to material, this book dives straight into building games. The book is divided into specific game genre projects, covering everything from old classics such as a Missile Command-style game, to hot new genres such as retro evolved. The chapters build in complexity through the book, and new tools are introduced along the way that can be reused for other games. The game projects covered start simple and increase in complexity as more and more tools are added to your tool chest. Ten full game projects are discussed in detail. Each solves a very different game development problem and builds on the knowledge gained from the previous project. Many advanced game development techniques are covered, including particle systems, advanced controls, artificial intelligence, blitting, scrolling, and more.

Kanner, 2007-04-20 A media and advertising CEO explains how his world shapes ours The TV program coming into our living rooms isn't free. It's a simple Faustian bargain consumers have made but one with enormous implications. It means that David Verklin, CEO

In *Watch This, Listen Up, Click Here*, Verklin and Kanner expose the inner workings of the media, marketing, and advertising industries. Readers will learn why their favorite shows get cancelled, why Oprah gives away cars, and how money, people, politics, and new technologies are transforming TV, the Internet, radio, magazines, and other media Americans consume every day. David Verklin (New York, NY) is CEO of Carat Americas, the world's largest independent media buying operation. He frequently speaks to executives in marketing, media, and management. Bernice Kanner (d. 2006) was a marketing expert and author for 13 years of New York magazine's On Madison Avenue column.

Four Ways to Click Amy Banks, Leigh Ann

Hirschman, 2015-02-05 Research shows that people cannot reach their full potential unless they are in healthy connection with others. Dr. Amy Banks teaches us how to rewire our brains for healthier relationships and happier, more fulfilling lives. We all experience moments when we feel isolated and alone. A 2006 Purdue University study found that twenty-five percent of Americans cannot

name a single person they feel close to. Yet every single one of us is hardwired for close relationships. The key to more satisfying relationships—be it with a significant other, a family member, or a colleague—is to strengthen the neural pathways in our brains that encourage closeness and connection. In this groundbreaking book, Dr. Banks give us a road map for developing the four distinct neural pathways in the brain that underlie the four most important ingredients for close relationships: calmness, acceptance, emotional resonance, and energy. *Four Ways to Click* gives you the tools you need to strengthen the parts of your brain that encourage connection and to heal the neural damage that disconnection can cause. The Phonetics and Phonology of Gutturals Amanda Miller-Ockhuizen,2004-06-01 This book is the first detailed investigation and description of phonotactic sound patterns affecting Khoesan click consonant inventories. It also includes the first quantitative study of phonation types in Khoesan languages, and the first study of phonation types associated with pharyngeal consonants all around. Although bases of OCP constraints have been presumed to be perceptual, this is the first quantitative study showing the acoustic basis of a particular OCP constraint in a specific language. Amanda L. Miller-Ockhuizen describes the phonetics and phonology of gutturals in the Khoesan language of Jul'hoansi. Hers is the first study of voice quality cues associated with epiglottalized

vowels. Thus, it is the first study to show that laryngeal and pharyngeal vowels are unified phonetically by non-modal voice qualities associated with them. It is also the first study to show that in addition to laryngeal coarticulation, whereby voice quality cues associated with laryngeal consonants are spread to a following vowel, pharyngeal coarticulation also involves spreading of voice quality cues. Thus, guttural consonants are united in that they all spread voice quality cues onto a following vowel. Voice quality cues found on vowels following guttural consonants are as large as similar cues associated with guttural vowels. This acoustic similarity is shown to be the basis of a novel Guttural OCP constraint found in the language, which is demonstrated to exist via co-occurrence patterns found over a recorded database of all of the known roots. Thus, this is the first book to provide a detailed perceptual basis of an OCP constraint. The database study also reports several other novel phonotactic constraints involving gutturals, as well as a reanalysis of the well-known Back Vowel Constraint. This book describes both phonetics and phonology of the natural class of guttural consonants, and shows through a quantitative acoustic investigation how the phonetic cues associated with these sounds are the bases of phonotactic constraints involving them.
