Fantastic examples feature living things that live at the depths of oceans and at the tops of the highest mountains, harness the energy of the sun to make food, make oxygen from carbon dioxide, walk on water, build structures that are air-conditioned, and make materials stronger than steel--without ever polluting or damaging the environment.

Faded Glamour Pearl Lowe,2019-10-08 "To me, an object that was once the height of elegance but is now a bit battered has far more allure than something brand new." Pearl Lowe in The Daily Telegraph Pearl Lowe has a passion for vintage finds with character-jewel-toned velvet sofas, hand-dyed lace curtains, gleaming lacquer cabinets--and these are the essential ingredients of Faded Glamour, a gloriously decadent and perfectly lived-in decorating style. With evocative photography, Pearl's beautiful Georgian home is revealed, showcasing her trademark blend of grandly romantic and cool rock 'n' roll interiors. Take a tour through the colorful living rooms, intimate bedrooms, and plush bathrooms of her creative friends' unique homes. There are hand-painted peacocks and an emerald silk bedspread in the charming house of a renowned British fashion designer; bright contemporary paintings on the perfectly rustic plaster walls of Hauser and Wirth in Somerset; a rainbow staircase and vivid embroidered wall hangings in the home of an eclectic jewelry designer, and so much more.

Mastering the Core Teachings of the Buddha

Daniel Ingram,2020-01-20 The very idea that the teachings can be mastered will arouse controversy within Buddhist circles. Even so, Ingram insists that enlightenment is an attainable goal, once our fanciful notions of it are stripped away, and we have learned to use meditation as a method for

examining reality rather than an opportunity to wallow in self-absorbed mind-noise. Ingram sets out concisely the difference between concentration-based and insight (vipassana) meditation; he provides example practices; and most importantly he presents detailed maps of the states of mind we are likely to encounter, and the stages we must negotiate as we move through clearly-defined cycles of insight. Its easy to feel overawed, at first, by Ingram's assurance and ease in the higher levels of consciousness, but consistently he writes as a down-to-earth and compassionate guide, and to the practitioner willing to commit themselves this is a glittering gift of a book. In this new edition of the bestselling book, the author rearranges, revises and expands upon the original material, as well as adding new sections that bring further clarity to his ideas.

Archaeology Anthropology and Interstellar Communication Douglas A. Douglas A.

Vakoch, 2015-03-24 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

Superfreakonomics Steven D. Levitt, Stephen J. Dubner, 2010-06-24 Here at last is the long awaited sequel to the international bestselling phenomenon, *Freakonomics*. Steven Levitt, the

original rogue economist, and Stephen Dubner have been working hard, uncovering the hidden side of even more controversial subjects, from charity to terrorism and prostitution. And with their inimitable style and wit, they will take us on another even more gripping journey of discovery. Superfreakonomics will once again transform the way we look at the world.

Astronomy with a Home Computer Neale

Monks, 2005-03-03 Here is a one-volume guide to just about everything computer-related for amateur astronomers! Today's amateur astronomy is inextricably linked to personal computers. Computer-controlled go-to telescopes are inexpensive. CCD and webcam imaging make intensive use of the technology for capturing and processing images. Planetarium software provides information and an easy interface for telescopes. The Internet offers links to other astronomers, information, and software. The list goes on and on. Find out here how to choose the best planetarium program: are commercial versions really better than freeware? Learn how to optimise a go-to telescope, or connect it to a lap-top. Discover how to choose the best webcam and use it with your telescope. Create a mosaic of the Moon, or high-resolution images of the planets... Astronomy with a Home Computer is designed for every amateur astronomer who owns a home computer, whether it is running Microsoft Windows, Mac O/S or Linux. It doesn't matter what kind of telescope you own either - a small refractor is just as useful as a big go-to SCT for most of the projects in this book.

The Manchurian Candidate Richard

Condon, 2013-11-25 The classic thriller about a hostile foreign power infiltrating American politics: "Brilliant . . . wild and exhilarating." -The New Yorker A war hero and the recipient of the Congressional Medal of Honor, Sgt. Raymond

Shaw is keeping a deadly secret—even from himself. During his time as a prisoner of war in North Korea, he was brainwashed by his Communist captors and transformed into a deadly weapon—a sleeper assassin, programmed to kill without question or mercy at his captors' signal. Now he's been returned to the United States with a covert mission: to kill a candidate running for US president . . . This "shocking, tense" and sharply satirical novel has become a modern classic, and was the basis for two film adaptations (San Francisco Chronicle). "Crammed with suspense." —Chicago Tribune "Condon is wickedly skillful." —Time

Rules of Play Katie Salen Tekinbas, Eric Zimmerman, 2003-09-25 An impassioned look at games and game design that offers the most ambitious framework for understanding them to date. As pop culture, games are as important as film or television—but game design has yet to develop a theoretical framework or critical vocabulary. In *Rules of Play* Katie Salen and Eric Zimmerman present a much-needed primer for this emerging field. They offer a unified model for looking at all kinds of games, from board games and sports to computer and video games. As active participants in game culture, the authors have written *Rules of Play* as a catalyst for innovation, filled with new concepts, strategies, and methodologies for creating and understanding games. Building an aesthetics of interactive systems, Salen and Zimmerman define core concepts like play, design, and interactivity. They look at games through a series of eighteen game design schemas, or conceptual frameworks, including games as systems of emergence and information, as contexts for social play, as a storytelling medium, and as sites of cultural resistance. Written for game scholars, game developers, and interactive designers, *Rules of Play* is a textbook, reference

book, and theoretical guide. It is the first comprehensive attempt to establish a solid theoretical framework for the emerging discipline of game design.
