Beyond Stanislaw Niewo,2008 At the end of life, on the voyage to beyond it, the brain, judged by ancient wisdom no less than by modern science to constitute the seat of thought, undergoes a transformation. What happens? This is the theme that *Beyond* addresses, by way of experiences reported in various sources and collected by a voyager who traveled to the edges of the mind in the course of the many adventures of a long, full, and varied life. Does something more await us in the great beyond? Do our memories no matter their vehicle hold some strand that permits us to continue to be ourselves? The machinery of information technology presents itself as a previously inconceivable route towards answers to such questions, and lies at the heart of the narrative, in the company of the notion of intelligence that guides the flow of the adventure which the book relates. Its an adventure

which each and every one of us will one day be able to experience, encountering persons and situations which link to one another by way of mysterious laws of affinity. Many of us look forward to that day, the ultimate adventure, others fear it. This book, of which the reader too is a protagonist, attempts to explore it.

Quantum Tunneling of Josephson Vortices in High-Impedance Long Junctions Wildermuth, Matthias Micha,2023-09-11 In the last decades, superconducting devices have emerged as a promising platform for quantum technologies, including quantum sensing and quantum computing. Their key elements are Josephson junctions, which allow for coherent supercurrent tunneling between two weakly linked superconductors. If such a junction is extended in one direction to a long junction, the superconducting phase difference can vary in space and time and may allow for quantized phase windings that drive supercurrent vortices.
