Handbook of Electrical Tables and Design Criteria V. F. Christoffer,1998 This comprehensive collection of tables and calculation procedures will enable you to design state-of-the-art electrical power distribution systems up to 600 volts for all kinds of industrial and commercial buildings and facilities. The Handbook gives you a quick and easy way of finding the results of electrical calculations simply by copying the answer directly from the table itself - or by using a four-function calculator. This reference also offers you help in developing answers to problems by means of a series of step-by-step design procedures in each section of electrical tables. Based on the most recent codes and specifications, Handbook of Electrical Tables and Design Criteria features tables and data for aluminum and copper conductors, calculation forms for voltage drop and derating of conductors, circuit design data for three-phase motors and transformers, data for power factor correction, NEMA ratings for enclosures, and fault-current tables, data, and calculation forms.
