Von Braun Michael Neufeld,2017-04-12 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun. Chief rocket engineer of the Third Reich and one of the fathers of the U.S. space program, Wernher von Braun is a source of consistent fascination. Glorified as a visionary and vilified as a war criminal, he was a man of profound moral complexities, whose intelligence and charisma were coupled with an enormous and, some would say, blinding ambition. Based on new sources, Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V-2 rocket and his times, detailing how he was a man caught between morality and progress, between his dreams of the heavens and the earthbound realities of his life.

JPRS Report ,1994-07

Reinventing NASA Roger Handberg,2003-12-30 From its beginnings, NASA was convinced that its real mission was to create the opportunity for a much different and better society on Earth, namely through human space flight. Pursuit of such a goal has led the agency to persist in certain activities even when they conflict with the wishes of Congress and the President. Recent changes in the international environment, changes that began well before September 11, 2001, have brought the military back into the field of human space flight, a situation that holds certain hazards for NASA since the military is more powerful politically. Dramatic changes could be in store, changes that could severely damage NASA's capacity for continuing what it sees as its primary objective. While most analyses see the agency as riddled with incompetence, Handberg argues that NASA's troubles are a product of its internal values. He begins with an historical overview of the major themes in NASA's history, followed by chapters on specific areas of concentration, such as the space station, space transportation, space science, and internal reforms. He also discusses the long-term future of the agency and human space flight in general, both domestically and internationally.

The Proton Launcher Christian Lardier,Stefan Barensky,2018-02-14 The Soviet / Russian space program was in the hands of three industrial empires: those of Serguei Korolev, the Soviet von Braun who launched Sputnik-1 and Yuri Gagarin, Vladimir Tchelomei, his main competitor, and Mikhail Yangel, Many launchers and satellites in Ukraine. In 2011, we published a first book on the history of the Soyuz launcher that was developed by Korolev and launched more than 1,800 copies. This time, we tell the story of the Proton, the main competitor of the European launcher Ariane, which was developed by Chelomei and launched more than 400 copies. Finally, the last book of the trilogy will deal with the many developments of Yangel. In the three books, the first part deals with the history of rockets in the USSR / Russia (East) and the second part on the history of their commercialization in the West.

Returning People to the Moon After Apollo Pat Norris,2019-06-04 July 2019 marks 50 years since Neil Armstrong took his famous first steps on the surface of the Moon. As people around the world celebrate the anniversary of this great American achievement, they might wonder why there have been no further human missions to the Moon since Apollo 17 in 1972. This book assesses the legacy of the Apollo missions based on several decades of space developments since the program's end. The question of why we haven't sent humans back to the Moon is explored through a multidisciplinary lens that weaves together technological and historical perspectives. The nine manned Apollo missions, including the six that landed on the Moon, are described here by an author who has 50 years of experience in the space industry and whose work spanned the Apollo 8-13 missions. The final section of the book provides a comprehensive assessment of today's programs and current plans for sending humans to the Moon.

Russia's Posture in Space Marco Aliberti,Ksenia Lisitsyna,2018-06-13 The book sheds new lights on the evolution of Russian space activities with a focus on their strategy of international cooperation. This analysis is carried out in relation to the evolution of the domestic and international dynamics that have been impacting the country's direction in space, with the ultimate goal of providing an assessment on their impact for current and foreseeable Europe-Russia space relations. Russia has traditionally been one of the two main strategic partners for Europe in its space endeavor. Hitherto, long-standing cooperation has been nurtured between the two actors in various areas, from scientific research to space transportation and human spaceflight. In recent years, however, a number of endogenous and exogenous developments has triggered significant changes in Russia's space posture. These changes are evident in the adjustment of Russia's space policies and programmatic goals, in the restructuring of the domestic space industry as well as in the attitude towards international space partnerships.

Cold War Space Sleuths Dominic Phelan,2012-11-28 "Space Sleuths of the Cold War" relates for the first time the inside story of the amateur spies who monitored the Soviet space program during the Cold War. It is written by many of those "space sleuths" themselves and chronicles the key moments in their discovery of hidden history. This book shows that dedicated observers were often better than professionals at interpreting that information coming out of the USSR during the dark days of the Cold War. This book takes a unique approach to the history of Soviet spaceflight - looking at the personal stories of some of the researchers as well as the space secrets the Soviets tried to keep hidden. The fascinating account often reads like a Cold War espionage novel. "Space Sleuths of the Cold War" includes an impressive list of contributors, such as: Editor Dominic Phelan, giving an overall history of the Cold War hunt for Soviet space secrets. Space writer Brian Harvey reveals his own personal search through official Soviet radio and magazines to find out what they were (and weren't) revealing to the outside world at the height of the space race. Sven Grahn from Sweden details his own 40 year quest to understand what was happening on the other side of the Iron Curtain. Professional American historian Asif Siddiqi explores his own adventures in the once secret Russian archives - often seeing documents never before read by Westerners. Dutch cosmonaut researcher Bert Vis provides an inside account of the Yuri Gagarin training center in Moscow. Belgian researcher Bart Hendrickx's details his important translation of the 1960s' diaries of cosmonaut team leader General Kamanin. Pioneer space sleuth James Oberg's shares his memories of his own notable 'scoops.' Paris-based writer Christian Lardier recounts the efforts of French space sleuths - whose work was frequently overlooked in the USA and Britain because of the language barrier.

Tena on S-String, Vol. 1 Sesuna Mikabe,2014-05-20 Discharged from the hospital after recovering from a serious accident, music teacher Kyousuke Hibiki finds himself able to see and hear musical notes coming from the people and the world around him! As he contemplates this lasting damage (and

All information is easy-to-understand and organized under specific command headings for immediate reference.

The Making of a Soviet Scientist R. Z. Sagdeev,1994 Writing with extraordinary candor, Dr. Sagdeev reveals startling details of the most politically sensitive scientific issues of the Cold War years. He identifies the key players in the Soviet nuclear weapons program (nearly all of whom he worked with) and recounts the internal battles over SDI technology and his own role in killing Russia's own Star Wars program.
