### **Supply Chain Information Technology** David L.

Olson,2012-01-06 In the past, vertical integration was a way to gain efficiency in supply chains. Today, vertical integration doesn't work as well because specialty organizations have developed to perform specific tasks very efficiently. Efficiency through supply chains is achieved today by linking specialists throughout the vertical business hierarchy. This sort of linkage is possible because of the technology that has developed which facilitates it, making today supply chains both faster and more cost effective. Supply Chain Information Technology surveys the different systems that are used by businesses to achieve these efficiencies. The target market for this book is practitioners in the supply chain management field, one of the fastest growing fields in our economy. The rapid growth in computer technology provides supply chains with valuable tools to better coordinate and control their operations. This book describes how these systems provide supply chains with information system support. The design of these systems and the tasks they perform are demonstrated with the help of analytic techniques and models that are used in the book.

**Transforming Supply Chains** John Gattorna, Deborah Ellis, 2019-08-05 John Gattorna and Deborah Ellis are long-term collaborators on the design and management of enterprise supply chains. Dr John Gattorna has been one of the most influential voices in the development of the modern supply chain. His long-held vision of the supply chain as the central nervous system of an organisation and as a major source of competitive advantage if done well has inspired both supply chain professionals and CEOs. To support this vision, he has led the development of frameworks and tools to guide design using customers as the sole frame-of-reference, thus ensuring precise alignment between enterprise supply chains and the markets/customers they serve. In 2018 John was awarded the Council of Supply Chain Management (CSCMP) Distinguished Service Award for his contribution to the

profession, and in the same year was inducted into the CSCMP Hall of Fame. Deborah Ellis has consulted with leading companies for over 20 years on logistics and supply chain strategy. Like John Gattorna, the emphasis of her work has been on developing tailored supply chains that generate market advantage. She has worked with him, and partnered with clients, to apply, refine and extend the frameworks and methodologies that simplify the supply chain task, while generating value for the customer and the business. Since 2017 they have together presented the Global Supply Chain Thought Leadership Retreat Series for senior supply chain executives in the Asia Pacific, South Africa and Europe. These by-invitation-only events have been very well received, and this book has evolved from the research and discussions associated with those events.

*Flow* Rob Handfield, PhD, Tom Linton, 2022-05-30 With supply chain disruptions increasingly discussed in the media and impacting our daily lives, *Flow* offers an important framework and solutions for remedying the rampant delays and bottlenecks that exist in global supply chains. Achieving flow is essential for organizations seeking to improve their supply chain performance in a time of increasing disruption. This book highlights the high-level effectiveness of business strategies that use predictions based on the sequence of world events, global supply chains, and data by exchanged smart technologies. By broadly applying physical laws to the global supply chain, Rob Handfield and Tom Linton explore the impact of supply chain physics on global market policies, such as tariffs, factory location, pandemic response, supply base geographies, and outsourcing. The authors provide specific recommendations

on what to do to improve supply chain flows, and include important insights for managers with examples from companies such as Biogen, General Motors, Siemens, and Flex with regard to their response to COVID-19.
