Don't Be Evil Rana Foroohar, 2019-11-05 A penetrating indictment of how today's largest tech companies are hijacking our data, our livelihoods, our social fabric, and our minds—from an acclaimed Financial Times columnist and CNN analyst WINNER OF THE PORCHLIGHT BUSINESS BOOK AWARD • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY FOREIGN AFFAIRS AND EVENING STANDARD “Don’t be evil” was enshrined as Google’s original corporate mantra back in its early days, when the company’s cheerful logo still conveyed the utopian vision for a future in which technology would inevitably make the world better, safer, and more prosperous. Unfortunately, it’s been quite a while since Google, or the majority of the Big Tech companies, lived up to this founding philosophy. Today, the utopia they sought to create is looking more dystopian than ever: from digital surveillance and the loss of privacy to the spreading of misinformation and hate speech to predatory algorithms targeting the weak and vulnerable to products that have been engineered to manipulate our desires. How did we get here? How did these once-scrappy and idealistic enterprises become rapacious monopolies with the power to corrupt our elections, co-opt all our data, and control the largest single chunk of corporate wealth—while evading all semblance of regulation and taxes? In *Don’t Be Evil*, Financial Times global business columnist Rana Foroohar tells the story of how Big Tech lost its soul—and ate our lunch. Through her skilled reporting and unparalleled access—won through nearly thirty years covering business and

technology—she shows the true extent to which behemoths like Google, Facebook, Apple, and Amazon are monetizing both our data and our attention, without us seeing a penny of those exorbitant profits. Finally, Foroohar lays out a plan for how we can resist, by creating a framework that fosters innovation while also protecting us from the dark side of digital technology. Praise for *Don't Be Evil* “At first sight, *Don't Be Evil* looks like it's doing for Google what muckraking journalist Ida Tarbell did for Standard Oil over a century ago. But this whip-smart, highly readable book's scope turns out to be much broader. Worried about the monopolistic tendencies of big tech? The addictive apps on your iPhone? The role Facebook played in Donald Trump's election? Foroohar will leave you even more worried, but a lot better informed.”—Niall Ferguson, Milbank Family Senior Fellow at the Hoover Institution, Stanford, and author of *The Square* and *The Tower*

Digital Typography Using LaTeX Apostolos Syropoulos, Antonis Tsolomitis, Nick Sofroniou, 2007-08-22 Using clear and concise language this book introduces new users to the use of the TeX system, in particular document preparation using LaTeX. It avoids the pitfalls of having to search through several advanced books on the subject, by collecting together the more frequently required tools and presenting these in a single accessible volume. It also describes the recent developments in multilingual typesetting using TeX that now make it straightforward for users to prepare documents in their own language and alphabet, giving the book a global readership. Topics include:

multi-lingual uses of LaTeX; discussion of hardware implementations; use and misuse of particular LaTeX commands; and many others.

The Lessons of the Vietnam War Jerold M. Starr,1991-01-01 Lessons of the Vietnam War covers all facets of the war from a diversity of perspectives. Blockchain Technology: Applications and Challenges Sandeep Kumar Panda,Ajay Kumar Jena,Santosh Kumar Swain,Suresh Chandra Satapathy,2021-04-30 This book discusses the various open issues of blockchain technology, such as the efficiency of blockchain in different domains of digital cryptocurrency, smart contracts, smart education system, smart cities, cloud identity and access, safeguard to cybersecurity and health care. For the first time in human history, people across the world can trust each other and transact over a large peer-to-peer networks without any central authority. This proves that, trust can be built not only by centralized institution but also by protocols and cryptographic mechanisms. The potential and collaboration between organizations and individuals within peer networks make it possible to potentially move to a global collaborative network without centralization.

Blockchain is a complex social, economic and technological phenomenon. This questions what the established terminologies of the modern world like currency, trust, economics and exchange would mean. To make any sense, one needs to realize how much insightful and potential it is in the context and the way it is technically developed. Due to rapid changes in accessing the documents through online transactions and transferring the currency online, many previously used methods are proving insufficient and not secure to solve the problem which arises in the safe and hassle-free transaction. Nowadays, the world changes rapidly, and a transition flow is also seen in Business Process Management (BPM). The traditional Business Process Management holds good establishment last one to two decades, but, the internal workflow confined in a single organization. They do not manage the workflow process and information across organizations. If they do so, again fall in the same trap as the control transfers to the third party that is centralized server and it leads to tampering the data, and single point of failure. To address these issues, this book highlights a number of unique problems and effective solutions that reflects the state-of-the art in blockchain Technology. This book explores new experiments and yields promising solutions to the current challenges of blockchain technology. This book is intended for the researchers, academicians, faculties, scientists, blockchain specialists, business management and software industry professionals who will find it beneficial for their research work and set new ideas in the field of

blockchain. This book caters research work in many fields of blockchain engineering, and it provides an in-depth knowledge of the fields covered.

Counterpoints Anti-Eviction Mapping Project Anti-Eviction Mapping Project, 2020-10 Counterpoints brings together cartography, essays, illustrations, poetry, and more in order to depict gentrification and resistance struggles from across the San Francisco Bay Area and act as a roadmap to counter-hegemonic knowledge making and activism. Compiled by the Anti-Eviction Mapping Project, each chapter reflects different frameworks for understanding the Bay Area's ongoing urban upheaval, including: evictions and root shock, indigenous geographies, health and environmental racism, state violence, transportation and infrastructure, migration and relocation, and speculative futures. By weaving these themes together, Counterpoints expands normative urban-studies framings of gentrification to consider more complex, regional, historically grounded, and entangled horizons for understanding the present. Understanding the tech boom and its effects means looking beyond San Francisco's borders to consider the region as a socially, economically, and politically interconnected whole and reckoning with the area's deep history of displacement, going back to its first moments of settler colonialism. Counterpoints combines the work of community partners, longtime community members who have fought waves of racial dispossession, and youth envisioning decolonial futures.

The Age of Addiction David T. Courtwright, 2019-05-06 We live in an age of

addiction, from compulsive gaming and shopping to binge eating and opioid abuse. What can we do to resist temptations that insidiously and deliberately rewire our brains? Nothing, David Courtwright says, unless we understand the global enterprises whose “limbic capitalism” creates and caters to our bad habits.

Makers and Takers Rana Foroohar, 2017-09-12 Is Wall Street bad for Main Street America? A well-told exploration of why our current economy is leaving too many behind. –The New York Times In looking at the forces that shaped the 2016 presidential election, one thing is clear: much of the population believes that our economic system is rigged to enrich the privileged elites at the expense of hard-working Americans. This is a belief held equally on both sides of political spectrum, and it seems only to be gaining momentum. A key reason, says Financial Times columnist Rana Foroohar, is the fact that Wall Street is no longer supporting Main Street businesses that create the jobs for the middle and working class. She draws on in-depth reporting and interviews at the highest rungs of business and government to show how the “financialization of America”—the phenomenon by which finance and its way of thinking have come to dominate every corner of business—is threatening the American Dream. Now updated with new material explaining how our corrupted financial system propelled Donald Trump to power, *Makers and Takers* explores the confluence of forces that has led American businesses to favor balance-sheet engineering over the actual kind, greed over growth, and short-term

profits over putting people to work. From the cozy relationship between Wall Street and Washington, to a tax code designed to benefit wealthy individuals and corporations, to forty years of bad policy decisions, she shows why so many Americans have lost trust in the system, and why it matters urgently to us all. Through colorful stories of both “Takers,” those stifling job creation while lining their own pockets, and “Makers,” businesses serving the real economy, Foroohar shows how we can reverse these trends for a better path forward.

Perspectives on Platform Regulation Judit Bayer, Bernd Holznagel, Päivi Korpisaari, Lorna Woods, 2021-11 Online social media platforms set the agenda and structure for public and private communication in our age. Their influence and power is beyond any traditional media empire. Their legal regulation is a pressing challenge, but currently, they are mainly governed by economic pressures. There are now diverse legislative attempts to regulate platforms in various parts of the world. The European Union and most of its Member States have historically relied on soft law, but are now looking to introduce regulation. Leading researchers of the field analyse the hard questions and the responses given by various states. The book offers legislative solutions from various parts of the world, compares regulatory concepts and assesses the use of algorithms.

Computational Materials Science June Gunn Lee, 2016-11-25 This book covers the essentials of Computational Science and gives tools and techniques to

solve materials science problems using molecular dynamics (MD) and first-principles methods. The new edition expands upon the density functional theory (DFT) and how the original DFT has advanced to a more accurate level by GGA+U and hybrid-functional methods. It offers 14 new worked examples in the LAMMPS, Quantum Espresso, VASP and MedeA-VASP programs, including computation of stress-strain behavior of Si-CNT composite, mean-squared displacement (MSD) of ZrO₂-Y₂O₃, band structure and phonon spectra of silicon, and Mo-S battery system. It discusses methods once considered too expensive but that are now cost-effective. New examples also include various post-processed results using VESTA, VMD, VTST, and MedeA.

Digital Typography Donald E. Knuth, 1999-03-13 Donald Knuth's influence in computer science ranges from the invention of literate programming to the development of the TeX programming language. One of the foremost figures in the field of mathematical sciences, Knuth has written papers which stand as milestones of development over a wide range of topics. In this collection, the second in the series, Knuth explores the relationship between computers and typography. The present volume, in the words of the author, is the legacy of all the work he has done on typography. When type designers, punch cutters, typographers, book historians, and scholars visited the University while Knuth was working in this field, it gave to Stanford what some consider to be its golden age of digital typography. By the author's own admission, the present work is one of the most difficult books that he has prepared.

This is truly a work that only Knuth could have produced.

Saints & Sinners Michelangelo Merisi da Caravaggio, McMullen Museum of Art, 1999 This exhibition at Boston College's McMullen Museum of Art (February-May 1999) takes an interdisciplinary approach to studying the style, subject matter, and functions of religious art in Italy between 1580-1680. The conceptual centerpiece of the exhibition is Caravaggio's recently rediscovered *The Taking of Christ*. The catalogue reproduces in color all of the paintings in the exhibition and includes a collection of essays that analyze how some of the period's most important artistic, religious, and social concerns are encapsulated within the various images. Contributors include Franco Mormando (Exhibition Organizer and Catalogue Editor), Gauvin Bailey, Noel Barber, Sergio Benedetti, Pamela Jones, John W. O'Malley, John Varriano, Josephine von Henneberg, and Thomas Worcester.

Relational Databases and Distributed Systems Andreas Sofroniou, 2021-03-29
Logical Collection of Related Data Database A database is a logically organised collection of related data, generally accessed by a set of programs known as a Database Management System (DBMS), which oversees the creation and use of the database and controls access to the data. The organisation of a database obviates the need to duplicate information to meet the various requirements of different groups of users, and ensures that the data always remains consistent. A large database requires extensive storage facilities. In some organisations and services, databases can be accessed over networks

from microcomputers or as videotex. 'Relational' databases and hypertext techniques include extensive and complex cross-reference facilities so that information on related items may be retrieved. Many database programs have been designed to run on micro-computers. Some of these contain computer languages that enable users to change the operation of the database to suit their requirements. For example, a mailing list on a micro-computer constitutes a simple database in which--if the information were available in a structured format--the DBMS could be instructed to print out the addresses of all the people called Smith, or of everyone on the mailing list living in Melbourne, Australia.

Data (computing) is the information that has been prepared, often in a particular format, for a specific purpose. In computing, the term data is used for material distinct from instructions: for example, if a computer multiplies two numbers together, the numbers themselves are the data, operated on by an instruction (to multiply them together). In a more restricted sense, data may be the information input for a particular program, as opposed to the results or output. A third meaning uses data as a term for information not in the form of words, sounds, or images: such data is usually information that is stored in a highly organized and compact form suitable for data processing.

Analogue computer An analogue computer is a computer that uses continuously variable (analogue) quantities to represent numbers. A voltage between 0 and 1 volt might represent numbers between 0.0 and 100.0, for example. Analogue computers can perform complex arithmetical operations

extremely quickly with very few components, but they are not very accurate. Digital computers Digital computers have replaced them almost entirely except in signal processing, where the basic analogue computing elements are still used very widely. Recent work suggests that analogue computing techniques might have a significant future in neural network computers. Neural networkThe neural network is a densely interconnected network of simple computer processing units (neurons) imitating some qualities of the biological nervous system. Unlike traditional computers, neural networks share out the computation simultaneously between many processors (parallel processing), enormously increasing their collective power. Consequently, neural networks are well-suited to the computationally intensive tasks of artificial intelligence, for example automatic speech recognition and image processing. The behaviour of a neural network is determined by the strength of its interconnections (synapses); large numbers of synapses help the network to recognize patterns in the presence of noise, and enable it to keep working after some of its synapses have been removed. HypertextHypertext is a generic term for computer systems used to store, retrieve, and view multi-dimensional documents. Hypertext systems are more flexible than conventional databases. Links may be made between parts of a hypertext document so that it can be read in a non-standard order, when pursuing a particular topic. Viewed text may be selected by using a mouse or keyboard, and displayed in a window. The first practical hypertext systems were developed in the 1980s...

Multiword Expressions Acquisition Carlos Ramisch, 2014-09-24 □ This book is an excellent introduction to multiword expressions. It provides a unique, comprehensive and up-to-date overview of this exciting topic in computational linguistics. The first part describes the diversity and richness of multiword expressions, including many examples in several languages. These constructions are not only complex and arbitrary, but also much more frequent than one would guess, making them a real nightmare for natural language processing applications. The second part introduces a new generic framework for automatic acquisition of multiword expressions from texts. Furthermore, it describes the accompanying free software tool, the mwetoolkit, which comes in handy when looking for expressions in texts (regardless of the language). Evaluation is greatly emphasized, underlining the fact that results depend on parameters like corpus size, language, MWE type, etc. The last part contains solid experimental results and evaluates the mwetoolkit, demonstrating its usefulness for computer-assisted lexicography and machine translation. This is the first book to cover the whole pipeline of multiword expression acquisition in a single volume. It addresses the needs of students and researchers in computational and theoretical linguistics, cognitive sciences, artificial intelligence and computer science. Its good balance between computational and linguistic views make it the perfect starting point for anyone interested in multiword expressions, language and text processing in general.

English History Made Brief, Irreverent, and Pleasurable Lacey Baldwin Smith,2012-05-15 Here at last is a history of England that is designed to entertain as well as inform and that will delight the armchair traveler, the tourist or just about anyone interested in history. No people have engendered quite so much acclaim or earned so much censure as the English: extolled as the Athenians of modern times, yet hammered for their self-satisfaction and hypocrisy. But their history has been a spectacular one. The guiding principle of this book's heretical approach is that history is not everything that happened, but what is worth remembering about the past.. . . Thus, its chapters deal mainly with Memorable History in blocks of time over the centuries. The final chapter The Royal Soap Opera, recounts the achievements, personalities and idiocies of the royal family since the arrival of William the Conqueror in 1066. Spiced with dozens of hilarious cartoons from Punch and other publications, *English History* will be a welcome and amusing tour of a land that has always fascinated Anglophiles and Anglophobes alike.

Introduction to Computational Materials Science Richard LeSar,2013-03-28 Emphasising essential methods and universal principles, this textbook provides everything students need to understand the basics of simulating

materials behaviour. All the key topics are covered from electronic structure methods to microstructural evolution, appendices provide crucial background material, and a wealth of practical resources are available online to complete the teaching package. Modelling is examined at a broad range of scales, from the atomic to the mesoscale, providing students with a solid foundation for future study and research. Detailed, accessible explanations of the fundamental equations underpinning materials modelling are presented, including a full chapter summarising essential mathematical background. Extensive appendices, including essential background on classical and quantum mechanics, electrostatics, statistical thermodynamics and linear elasticity, provide the background necessary to fully engage with the fundamentals of computational modelling. Exercises, worked examples, computer codes and discussions of practical implementations methods are all provided online giving students the hands-on experience they need.

Four Kinds of Rain Robert Ward, 2012-05-01 Broke, recently divorced, and a total deadbeat, Bob Wells has spent his life as a psychiatrist only doing good in the world. When one of his patients with clear paranoid delusions starts to lose a grip, Bob has no choice but to intervene. Emile Bardan is haunted by demons, and he believes that someone is trying to steal his most prized possession, the legendary Mask of Utu. Bob thinks it's all part of Emile's imagination until he discovers that Emile is telling the truth and that the mask is worth millions. It's Bob who may actually be the one losing

his grip. He's tired of helping people for nothing, tired of being treated like dirt—and while he may have met the girl of his dreams, he doesn't want to lose her because he can't take care of her. There is only one thing to do: Bob is going to steal the mask himself: But doing so may mean making the biggest mistake of all—as he proceeds down a path into a dark abyss from which there is no return.

Multiword expressions Manfred Sailer ,Stella Markantonatou , Multiword expressions (MWEs) are a challenge for both the natural language applications and the linguistic theory because they often defy the application of the machinery developed for free combinations where the default is that the meaning of an utterance can be predicted from its structure. There is a rich body of primarily descriptive work on MWEs for many European languages but comparative work is little. The volume brings together MWE experts to explore the benefits of a multilingual perspective on MWEs. The ten contributions in this volume look at MWEs in Bulgarian, English, French, German, Maori, Modern Greek, Romanian, Serbian, and Spanish. They discuss prominent issues in MWE research such as classification of MWEs, their formal grammatical modeling, and the description of individual MWE types from the point of view of different theoretical frameworks, such as Dependency Grammar, Generative Grammar, Head-driven Phrase Structure Grammar, Lexical Functional Grammar, Lexicon Grammar.
