Sustainable Structures in Software Implementations by Live Compliance Checking Jens Knodel, 2011 Software architecture - besides other aspects - outlines the structure of software systems prescribing the intended decomposition. Developers then translate the abstract building blocks of the system into source code, but more often than not implementations exhibit significant structural violations. This thesis presents live architecture compliance checking - an empirically validated, tool-supported approach for sustaining structure in software implementations. Live compliance checking detects architecture violations at the earliest point in time possible - right after their insertion - and the live feedback enables developers to repair the structure with minimal effort. Live architecture compliance checking enables development organizations to successfully rely on their software architecture as the instrument for guiding the evolution of the software system.

Real England Paul Kingsnorth, 2011-08-04 We see the signs around us every day: the chain cabs and mobile phone outlets that dominate our high streets; the disappearance of knobbly carrots from our supermarket shelves; and the headlines about yet another traditional industry going to the wall. For the first time, here is a book that makes the connection between these isolated, incremental local changes and the bigger picture of a nation whose identity is being eroded. As he travels around

the country meeting farmers, fishermen and the inhabitants of Chinatown, Paul Kingsnorth reports on the kind of conversations that are taking place in country pubs and corner shops across the land - while reminding us that these quintessentially English institutions may soon cease to exist.
